SUMMARY

The traditional concept of sport is based upon an activity classification system by participation style. This has been developed by professionals who have created artificial barriers to understanding the nature of sport. The articles in this section raise questions as to the difference between direct and indirect services in sport as a leisure activity, question the classifications system and suggest a potential new system based upon outcomes. All activities can be categorized by outcomes. In such a system, it is important to understand the outcomes that each activity can produce or its basic potential as an input into programming decisions.
