This Report is brought to you for free and open access by the Sociology at ScholarWorks@BGSU. It has been accepted for inclusion in National Center for Family and Marriage Research Family Profiles by an authorized administrator of ScholarWorks@BGSU.
Nonmarital childbearing has increased rapidly in the United States since the 1980s. Nowadays, about two of every five children are born to an unmarried mother (FP-15-03). Although considerable attention has been paid to trends in nonmarital childbearing, there has been less focus on how U.S. adults’ attitudes towards childbearing outside of marriage shift over time. This family profile examines those attitudes in 1988 and 2012 using data from the General Social Survey (GSS). The GSS asks respondents their level of agreement with the statement “People who want children ought to get married.” The values presented in the figures represent those who endorse this statement by responding either “agree” or “strongly agree.”

Between 1988 and 2012, there was a decrease in the share who agreed with the statement “People who want children ought to get married.” The share endorsing this view declined from nearly three-quarters in 1988 to 61% in 2012.

Consistent with the overall trend, regardless of age, the share who agreed with the statement “People who want children ought to get married” decreased.

At both time points, however, age is positively related to agreement—the older the respondent, the greater share who agreed.

In 2012, three-fourths of those aged 50 and older agreed childbearing should occur within marriage compared to half of those aged 18-29.

As the overall percentage who agreed has decreased, so too has the gap in agreement between those aged 18-29 and those aged 30-49.

In 2012, about half of the youngest respondents agreed, as did slightly more than half (55%) of those in the middle-age group.
Attitudes Towards Births Outside of Marriage by Gender

- At both time points, smaller shares of women, compared to men, agreed that people who want children should get married.
- Over the past twenty-four years, the gender-gap in agreement has nearly doubled—agreement with the statement has declined more rapidly for women than for men.

Figure 3. Percentage of U.S. Adults Who Agreed “People Who Want Children Ought to Get Married” by Gender, 1988 & 2012

![Graph showing the percentage of U.S. adults who agreed with the statement by gender, with a decline over time.]
