This Report is brought to you for free and open access by the Sociology at ScholarWorks@BGSU. It has been accepted for inclusion in National Center for Family and Marriage Research Family Profiles by an authorized administrator of ScholarWorks@BGSU.
In 2014, there were nearly 68 million grandparents aged 40 and over in the United States, according to the Survey of Income and Program Participation (SIPP). This figure represents 46% of adults aged 40 and older. The SIPP is a nationally representative household-based survey and is designed to provide comprehensive family and social information on individuals and families. Because the SIPP gathers information on all individuals who lived in a surveyed household, and directly asks respondents if they are a grandparent, it is one of the few surveys that identifies non-resident grandparents. Using data from the 2014 Survey of Income and Program Participation (SIPP), this profile updates FP-14-12 to examine grandparents’ age composition, race/ethnicity, and educational attainment by resident status of grandchildren. This is the final profile in our series on grandparents in the U.S.

Age Composition of Grandparents by Resident Status of Grandchildren

- On average, resident grandparents were five years younger than nonresident grandparents (median age of 60 vs. 65). Almost half of resident grandparents (48%) were under age 60, whereas one-third of nonresident grandparents were under age 60.
- Nonresident grandparents were more often in older age groups. The majority (67%) of nonresident grandparents were aged 60 and older.

Race/Ethnicity of Grandparents by Resident Status of Grandchildren

- A larger share of grandparents with resident grandchildren belonged to a racial/ethnic minority group (52%) compared to nonresident grandparents (23%).
- Among non-Whites, Hispanics constituted the largest share of resident grandparents (27% of all resident grandparents). However, among nonresident grandparents, only one in ten were Hispanic.
- A higher percentage of resident grandparents were Black than nonresident grandparents (18% and 12%, respectively).
- Although few grandparents were Asian, twice as many resident grandparents than nonresident grandparents were Asian (6% versus 3%).

Educational Attainment of Grandparents by Resident Status of Grandchildren

- Resident grandparents had lower levels of educational attainment than nonresident grandparents.
- Thirty percent of resident grandparents had less than a high school education compared to 16% of nonresident grandparents.
- One in ten (11%) resident grandparents were college graduates, whereas two in ten (21%) nonresident grandparents were college graduates.
