FP-18-02

Coresident Grandparents: Caregivers versus Non-Caregivers

Huijing Wu

In 2015, over 72 million individuals were living with at least one grandchild (coresident grandparents). Not all, but many coresident grandparents fill the role of caregiver to their resident grandchildren. Among coresident grandparents, 36% were caregivers—a slight decrease from 39% in 2010 (FP-12-18). Using data from the American Community Survey, this profile updates FP-12-18 to examine coresident grandparents and their responsibility for grandchildren by grandparents' age and poverty status as well as how long they have been responsible for their grandchildren. We also examine changes in household structure among grandparent caregivers between 2005 and 2015.

Age Distribution of Grandparent Caregivers vs. Non-Caregivers

Figure 1. Grandparent Caregivers vs. Non-Caregivers by Age Groups, 2015

- Grandparent caregivers are younger than non-caregivers, with a median age of 57 and 61, respectively (not shown). Nearly one-fourth (23%) of caregivers were younger than 50 compared to only 13% of grandparent non-caregivers.
- Only about one-tenth of grandparent caregivers were aged 70 and older. However, nearly one-quarter of grandparent non-caregivers were aged 70 and older.

Among coresident grandparents, 36% were caregivers...

Economic Disadvantage of Grandparent Caregivers vs. Non-caregivers

- A larger share of grandparent caregivers was economically disadvantaged than non-caregivers. Among grandparent caregivers, 47% were living in poverty or in a low-income household compared to 36% of grandparent non-caregivers.
- The discrepancy was driven by the disproportionate share of grandparent caregivers who were living in poverty—20% versus 12% among their non-caregiving counterparts.

Grandparent Caregivers' Duration of Responsibility

Figure 3. Grandparent Caregivers' Duration of Responsibility, 2015

Note: Does not total to 100% due to rounding. Source: U.S. Census Bureau, American Community Survey, 1-yr est. 2015

- It is most common for caregiving grandparents to have engaged in this role for five years or more. Two in five (42%) grandparent caregivers reported they have been responsible for the care of their grandchildren at least five years.
- One in five (20%) grandparent caregivers have been responsible for less than one year.

Grandparent Caregivers by Household Types

Figure 4. Grandparent Caregiver by Household Types in 2005, 2010, & 2015

Source: U.S. Census Bureau, American Community Survey, 1-yr est. 2015

- Most grandparent caregivers, at least three out of five, were living with their grandchild and the grandchild's parent (three-generation household). Between 2005 and 2015, there were modest changes.
- In 2005, 39% of grandparent caregivers lived with their grandchildren in a skipped-generation household (e.g., the grandchild's parent was not present in the household). This percentage declined to 32% in 2010 but increased slightly to 35% in 2015.
