Research team to investigate effects of social networks on teens

Orly, Peggy Gordon, and Theodore Great to identify "things as problems," Gordon said. The term "social networking" is a broad concept in itself. The team will focus on the social relationships and school life. When things don't work out as we thought they would, we long to find out what went wrong.

Gordon has conducted a tremendous range of studies for blacks and whites, and she wants to learn more about these groups. For the new study, the sociologists will select 100 children from among the Long County, Chatham, and Richmond County communities. They will be surveyed in 1986. Participants in that study may be their own and others with whom they have connections. Gordon said they will study what makes them think about a particular issue and how they react to it. The results of a study published in 1982 by Gordon, Paula Gordon, and Ashley Great, are important to us because they have been studying blacks and whites. The study found that blacks and whites have different perceptions of what makes them think about a particular issue and how they react to it. The study also found that blacks and whites have different perceptions of what makes them think about a particular issue and how they react to it.

I firmly believe that we have a tremendous range of studies, not only for blacks and whites, but for the whole United States. The results of a study published in 1982 by Gordon, Paula Gordon, and Ashley Great, are important to us because they have been studying blacks and whites. The study found that blacks and whites have different perceptions of what makes them think about a particular issue and how they react to it. The study also found that blacks and whites have different perceptions of what makes them think about a particular issue and how they react to it. The study also found that blacks and whites have different perceptions of what makes them think about a particular issue and how they react to it.
Commentary

Editor’s note: Melissa Firestone is the Monitor editor and is spending the year as part of the University’s exchange program with Xi’an Foreign Languages University in China.

There is a campus, almost directly halfway, around the world from Bowling Green State University, called Xi’an Foreign Languages University. The students are called Xi’an Foreigh Language University students. This is the school that the students at Bowling Green, Ohio, are interested in.

The students come to Bowling Green State University in a year or two.

But despite some of these seemingly difficult misunderstandings, living and studying here has been a truly liberating experience.

The educational system is in place and students are working towards their classes.

We want a more comprehensive approach. We want to be more comprehensive. We want to be more comprehensive.

I have the same experience as a student in a classroom and a student in a classroom.

My mother and I are teaching composition writing and newspaper readings to students.
Fythe receives grant to design hands-on science program

A $5,123 grant has been awarded to the Ohio Board of Regents to Dr. Daniel Fythe, associate professor of education at the University of Wisconsin-Madison, to support the development of an innovative hands-on science program. The project is funded by the National Science Foundation, and is designed to help students make science more enjoyable and accessible.

Fythe's project, titled "The Science Lab: An Innovative Hands-On Science Program," aims to create a hands-on science program that is engaging and effective for all students. The program will include interactive activities, games, and experiments that will help students understand scientific principles and develop critical thinking skills.

The program will be tested in a series of classrooms across the state, with the ultimate goal of making science more accessible to all students. The project will also include professional development opportunities for teachers, as well as resources for parents and caregivers.

"This grant will allow us to design a hands-on science program that is engaging and effective for all students," Fythe said. "We are excited to bring this program to our classrooms and help students make science more enjoyable and accessible."
Fyfe receives grant to design hands-on science program

A $55,123 grant has been awarded by the Ohio Board of Regents to Dr. Daniel Fyfe, assistant professor of science education, and Dr. Joseph Jones, professor of science education and director of the University of Toledo's Center for Science Education, for a grant that will design hands-on science programs.

"Many elementary and middle school educators have found that hands-on science programs are more engaging and meaningful to students," Fyfe said. "Many hands-on science programs are available, but they are not always used because of the hands-on obstacles.

Fyfe, an authority on teaching science programs, believes that teachers may be performing experiments in the classroom that are not engaging or meaningful. His new work, however, is online and can be easily accessed by teachers.

The goal of the Ohio City project is to make science accessible to every student. The project goals include:

1. Teaching the concepts of hands-on science programs.
2. Creating a hands-on science program that can be used in any classroom.
3. Making the hands-on science program accessible to all students.

One of the best and most inexpensive methods available is to clean up polluted land, water, and hazardous spills. The microcomputer is a powerful tool, allowing for the design of hands-on science programs.

Thayer wins vice presidency of state music schools organization

Dr. Roberton, a past president of the Ohio State Music School, is the new vice president and president-elect of the Ohio Association of Music Teachers. He is a full-time teacher at Northwestern University.

"Science education is more than the 3 Rs," Roberton said. "An increasing number of students are turned off by science classes. These days, education is more than the 3 Rs. It is about learning and discovery."

Fyfe, who received his PhD in education from the University of Wisconsin-Madison, was awarded the grant for a two-year program designed to "The American Dream."
Friedman, Skaggs awarded 1991 U.S. Navy Prize in Naval History

Two history professors have been awarded the American Society of Photobiology for their distinguished service to the field of science.

Dr. Michael J. Rodgers, former president of the American Society for Microbiology, has been awarded the 1991 David Friedman Medal for his contributions to the field of photobiology. The medal is presented annually by the American Society for Photobiology to recognize outstanding contributions to the field of photobiology.

Rodgers, who is a professor at California State University, Fullerton, received the award for his research on the effects of light on biological systems. His work has focused on the role of photoreceptors in the regulation of physiological processes, particularly in the cardiovascular and nervous systems.

The American Society for Photobiology is a professional organization that fosters the study of the interactions between light and biological systems. The society is dedicated to advancing the understanding of the effects of light on biological systems and to promoting the use of photobiology in medicine and other fields.

The award was presented during the annual meeting of the American Society for Photobiology, held in San Diego, California. Rodgers will receive the award at a ceremony to be held on June 1, 1991.

The award is named after David Friedman, who was a pioneer in the field of photobiology. Friedman was a medical illustrator who developed the first photographic method for studying the effects of light on biological systems.

Local history conference to get new format

An annual one-day conference on local history sponsored by the Center for Archives Collections will not be held this year.

The program, which is normally held in early April, is being restructured. This year, in lieu of holding a program this year, a program committee is preparing for a two-day conference in the spring of 1993. The program committee will subject to further changes and will be merged with the program committee in time for the next program.

The program committee will be held March 29th and 30th at the Ohio Public Library in Bowling Green. The program will be held on the fifth floor of John Stockdale in the offender program.

The program will be held on the fifth floor of John Stockdale in the offender program. A live or delayed telephone program will be held on the fifth floor of John Stockdale in the offender program.

Friedman, Skaggs awarded 1991 U.S. Navy Prize in Naval History

Two history professors have been awarded a prize for their work in naval history. The awards were announced at a ceremony in Washington, D.C.

Dr. Lawrence J. Friedman and Dr. David C. G. Schneider were awarded the 1991 U.S. Navy Prize in Naval History for their work on the Battle of the Lake Erie.

The article focuses on Captain Elliott, a second-hand to Commodore Oliver Hazard Perry at the Battle of Lake Erie. The article also mentions that Perry was a decorated war hero and received the Medal of Honor for his service.

Rogers seeks president-elect post for American Society of Photobiology

Dr. Michael A.J. Rogers, Emeritus Scholar of Photobiology, is a candidate for president-elect of the American Society of Photobiology. He is currently the president of the Society.

"The American Society of Photobiology is a leading organization for research and education in the field of photobiology," he said. "I would like to work with the society to promote and support programs that enhance the education and research of photobiologists."

**OBITUARY**

Gloyd Roe

Gloyd W. Roe, 67, died Feb. 18. He had been a Building maintenance employee of the University for 22 years. Memorial services may be made to the Wood County Unit of the American Heart Association.

**Job evaluation form to be given**

Dr. James McElheny, management, will conduct an exercise on the current performance appraisal form and how to make the process more relevant to supervisors and the employees. In addition, he will discuss performance expectations and development of measurable goals and objectives for the employees.

The session will be from 8:30 to 10 a.m. and 2 to 4 p.m., Monday, March 2. Both sessions will be in the Alumni Room, University Union. To register for the program contact Laura Gonzalez, 2-8421.

**Recruiting strategies to be presented**

A workshop entitled "Hiring and Retaining Minority Students. Faculty and administrators. Strategies to the 90's" will be presented from 12:30 to 3:30 p.m. April 8 in the Campus Room, University Union.

Presented on today's black issues in Higher Education, the strategies are designed to provide a comprehensive and candid overview of recruiting minorities who have worked or failed and why.

"Theater," presented by "UA/OSU Natural Science Lecture Series," 7:30 p.m., Men's basketball, 2-0400.

**New tax tables affect March pay**

The new federal withholding tables released recently by the Internal Revenue Service will go into effect at the University March 1. The treasurer's office has released the tables.

The revised tables reduce the amount of withholding for federal taxes from an individual's biweekly or monthly pay. The revised tables apply to the remaining pay periods of March and April and the tables used to compute employees' 1990 federal tax obligation will remain unchanged. These reduced withholding rates will provide more take-home pay beginning in March paychecks. However, the treasurer's office has released the tables to aid employees who believe that individuals will receive smaller refunds or have fewer-federal tax refunds when filing 1990 federal tax returns. An employee with a withholding table on receipt of their first pay in March, that the new federal withholding is appropriate for them, may request a new withholding table. Employees may request their withholding table on the authority of the treasurer's office.

- Employees may wish to verify, upon return to work, withholding rates and amounts withheld. The revised table will be open on the Employee Services Web site within 25 working days.
