This Report is brought to you for free and open access by the Sociology at ScholarWorks@BGSU. It has been accepted for inclusion in National Center for Family and Marriage Research Family Profiles by an authorized administrator of ScholarWorks@BGSU.
This Family Profile, an update of previous profiles on the marriage rate [FP-17-25; FP-18-20; FP-19-22], estimates adjusted marriage rates for the U.S. and each state for 2019. Using American Community Survey (ACS) data, we estimate the number of marriages occurring in the last year among unmarried women, calculate the margins of error, and describe geographic variation. For detailed information on the adjusted marriage rate from 2008-2017, see “Charting Marriage & Divorce in the U.S.: The Adjusted Marriage Rate” (Payne, 2018).

U.S. Marriage Rate, 2019

- The marriage rate continued to be stable in 2019, remaining at a 45-year low since 2010.
- In 2019, there were 30.5 marriages per 1,000 unmarried women.
- 2.2 million women married in 2019, an increase of about 117,742 marriages from 2010.

Data Sources:

Five Highest and Lowest Marriage Rates, 2019

- Wyoming (surpassing Utah) now holds the top spot in terms of the marriage rate with 49 marriages per 1,000 unmarried women in 2019.
- Rhode Island continues to hold the lowest marriage rate in 2019. The rate decreased from 24 marriages per 1,000 unmarried women in 2018 (FP-19-22) to 21 marriages per 1,000 unmarried women in 2019.

²MOE = Margin of Error. The MOE is a measure of sampling error and expresses the maximum range in which the rate is expected to differ from the actual proportion. The MOE is calculated for the derived estimates at the 90% confidence level.
State Rankings and Geographic Variation in Marriage Rates, 2019

Figure 3. State Variation in the Adjusted Marriage Rate per 1,000 Unmarried Women Aged 15+ by Quartile, 2019

- The states with the highest marriage rates (making up the 1st quartile) in 2019 had rates of at least 35.2 marriages per 1,000 unmarried women aged 15 and older. Among the states in the top quartile, all are substantially above the national average (30.5 marriages per 1,000 unmarried women).
- The states with the lowest marriage rates (making up the 4th quartile) in 2019 had fewer than 28.2 marriages per 1,000 unmarried women. Among the states in the bottom quartile, those with marriage rates considerably below the national average are Rhode Island, Delaware, Connecticut, Vermont, Louisiana, New Mexico, New Jersey, New York, Florida, Massachusetts, Mississippi, Pennsylvania, and Maryland.

Figure 4. Geographic Variation of Women’s Adjusted Marriage Rate Among States, 2019

- Most states in the Western region of the country had high marriages rates (1st or 2nd quartile).
  - Exceptions include California, Arizona, and New Mexico.
- Midwestern states exhibited marriage rates in the top three quartiles with the largest share found in the first.
- Southern states are spread across each quartile. The largest share is found in the second.
  - All states in the Northeast (except for Maine) exhibited low marriage rates (3rd or 4th quartile).
