Family Profile No. 7, 2021

Grandchildren Living in Grandparent -Headed Households, 2019

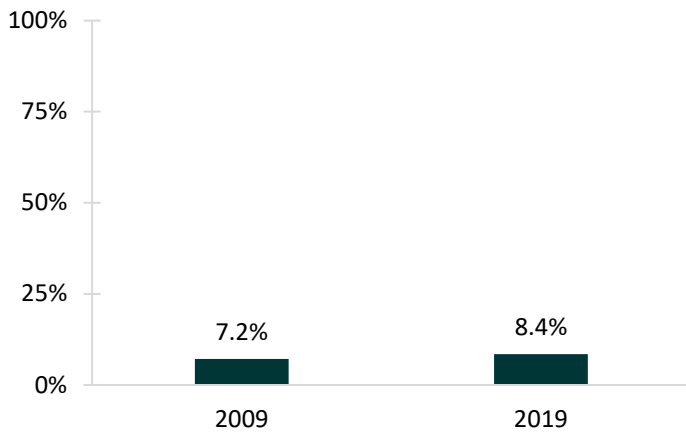

Author: Lisa Carlson

The share of children living in grandparent-headed households has increased since the 1970s, adding to the growing diversity in children's living arrangements (FP-18-01). Using the American Community Survey, this family profile charts grandchildren residing in grandparent-headed households from the child's perspective, focusing on both multigenerational grandparent-headed households (parent present) and skipped-generation grandparent-headed households (no parent present). The profile further examines variation in types of grandparent-headed households by minor children's age, household economic disadvantage, and race/ethnicity. This profile is an update of FP-18-01.

Trend in the Proportion of Children Living in a Grandparent's Household and Presence of Parent

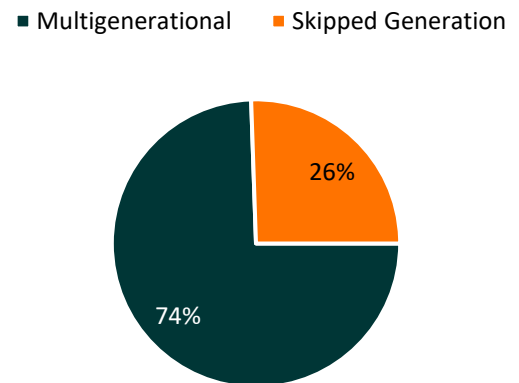

- The percentage of minor children living in grandparent-headed households has increased since 2009 with nearly 1 in 10 children residing in this family form in 2019 (from 7.2% in 2009 to 8.4% in 2019).
- About three-quarters of minor children who resided in grandparent-headed households lived in multi-generational households (with a parent present), and one-quarter lived in skipped-generation households (without a parent present).

Children Living in a Grandparent's Household by Presence of Parent and Age of Child

- Regardless of age, the majority of minor children who lived in grandparent-headed households also had a parent present in the household (multigenerational).
- The share of minor children who lived in skipped-generation households increased with children's age and was highest among those aged 13 to 17.
 - The percentage of minor children aged 13 to 17 who lived in skipped-generation households was more than double the share of minor children aged 6 and under (39% compared to 17%).

Economic Disadvantage Among Children Living in a Grandparent's Household by Presence of Parent

- Among all children living in grandparent-headed households, the proportion living in skipped-generation households varied by income level, with higher levels at lower incomes.
 - Among children living in grandparent-headed households below the poverty line, about half resided in multigenerational households (55%) and half in skipped-generation households (45%).

- Among minor children residing in grandparent-headed households in 2019, the proportion living in multigenerational households (parent present) was higher than in skipped-generation households across all racial/ethnic groups.
- There was some variation in the proportions of the two types of grandparent-headed households across race/ethnicity.
 - The shares living in multigenerational households were larger for Hispanic and Asian children (83% and 87%, respectively) than for children of all other racial/ethnic groups.
 - The percentage of children in skipped-generation households was largest among Black children (31%), followed by white children (28%), and children of other racial/ethnic groups (27%).
