## Median Age at First Divorce, 2020

Author: Christopher A. Julian

The median age at first divorce in the United States has increased steadily since 1970 with a persistent gender gap. At the same time, the overall divorce rate has been on a downward trend ([Westrick-Payne, 2022](#)). The counterpart of the median age at first divorce, the median age at first marriage has also increased over time ([Julian, 2022](#)). In this profile, we use the 2020 American Community Survey (ACS) 1-Year Experimental IPUMS data to examine differences in the median age at first divorce by race/ethnicity and educational attainment as of 2020.<sup>1</sup> This is an update to our previous profiles on the topic for the years 2018 ([Schweizer, 2018](#)) and 2015 ([Anderson, 2017](#)).

- In 1970, the median age at first divorce for men was 30.5 and 27.7 for women; by 2020, it reached 42.6 and 40.1, respectively (see Figure 1).
  - This represents historic highs for both men and women in their median ages at first divorce.
- The gender gap in age at first divorce has persisted over time. In 1970, the gap was 2.8 years and in 2020 it was about 2.5 years

## Median Age at First Divorce by Race and Ethnicity

- Among women who divorced in the 12 months preceding the 2020 ACS, Asian women had the oldest median age at first divorce (44.6) and native-born Hispanic women had the youngest median age at first divorce (38.0).
- Among men who divorced the preceding year, Black men had the oldest median age at first divorce (45.9). Similar to native-born Hispanic women, native-born Hispanic men had the youngest median age at first divorce (37.5).
- The age variation in median age at first divorce by race/ethnicity was greater among men compared to women.
  - Men’s median age at first divorce varied by over 8 years whereas among women it varied by 5.5 years.
- The largest gender gap was between White men and women (3.5 years). The narrowest gap was between native-born Hispanics (about half a year).

<sup>1</sup> The standard 2020 ACS 1-year data products will not be released due to the impact from the COVID-19 pandemic on data collection and data quality (for more information click [here](#)).

## Median Age at First Divorce by Educational Attainment

- Among women who married in the 12 months preceding the 2020 ACS, the median age at first divorce by educational attainment differed by 5.6 years.
  - Those with a graduate/ professional degree had the oldest median age at first divorce (42.5) compared to women with some college, no degree with the youngest median age at first divorce (36.9).
- Among men, those with a graduate/ professional degree had the oldest median age at first divorce (44.5). Men with an associate degree had the youngest median age at first divorce (40.2) for a range of 3.6 years, which was 2 years smaller than that of women
- The largest gender gap was between men and women with a bachelor's degree (4.0 years). The narrowest gap was between men and women with an associate degree (less than a year).
- The older median age at first divorce for those with graduate/ professional degrees corresponds to their older median age at first marriage (FP-15-22).
  - The oldest median ages at first marriage for women are among those with a doctorate degree (31.5) followed by those with a masters/ professional degree (30.5) (FP-15-22).
  - Among men, those with doctorate degrees and masters/professional degrees shared the oldest median age at first marriage (31.6) (FP-15-22).
