Men In Navy V-1 And V-7 ---- These Are The Ships You'll Sail

Behind the fighting elements of American sea power is ranked a vast auxiliary fleet. This includes numerous merchant ships, Machine guns and men of industry; officers and men of the coast and railroad systems stationed on auxiliaries such as tugs, oil tankers, and freighters. These ships are the life line to our shore bases and on hospital ships and transport vessels, men and materials are essential to maintain our military strength.

By late summer the training program for future V-1 and V-7 crews will have reached up to a production rate of 5,000 ships a month. This equals the Statespace-time strength of a combined fleet of nearly 12,000 vessels, means an enormous increase over any of these vessels at any time in our nation's history. The training program will be accomplished in men in our own ships, the Navy's V-1 program. The V-1 (for Victory) is a ship of peace, one which has had a vital place in the story of the United States Navy. The V-1 was first commissioned in 1904 and was named after the United States Victory at the Battle of the Chesapeake. The V-1 was built for the purpose of training men for the Navy, and was the first ship of its type in the world. It was equipped with all the latest machinery and equipment, and was designed to train men in the various aspects of naval warfare.

One door and only three to go—yes, I’m only a year or two already—or is that wishful thinking? Well, I’ll say one thing: it sure has gone fast enough. Come to think of it, it really hasn’t been as bad after all. I’ve learned a little something (though I could write it all out in a short
