An art in the air

Carl Hall rebuilds one-of-a-kind plane

I t was a proud day last September for Carl Hall, art and短线 head of the Nursing School at Bowling Green State University, when they bowed the first flight of the restored Alon Model A4 aircraft they had been working on for several months. Hall, who is a pilot himself, said, "It’s a thrill to fly this plane and see it fly."

No matter what the craft’s engine and equipment may look like, it is the man who wanted not only to restore the plane but to fly it again. "No, not all the parts are hers," Hall said, "but I’ve flown this plane for more than 30 years." Hall said he was a former pilot for the University Airline and that the plane's in her present condition, she requested to have the plane's propeller and ailerons in a condition to fly again.

"Oedipus," the plane, was built in 1960 and was flown by the University Airline's "Oedipus in Wonderland," University of Oregon. The Alaon A4 was built in 1919 by Alon Inc., and is one of the best known of the early planes. Hall said it was built for $1,000.

With a top speed of 160 m.p.h., it was designed to operate in small airports, with the built-in seats being used for the flight's duration. Hall said it was flown in small airports. Hall said it was flown in 1919 by Alon Inc., and was one of the best known of the early planes. Hall said it was built for $1,000.

Technology programs vital to Ohio industry

For the first consecutive year, Bowling Green State University has received the Society of Manufacturing Engineers' "Outstanding Student Chapter" award. The group was recognized for its activities and promotions of the industrial field.

"The Outstanding Student Chapter" award is given annually by the Society of Manufacturing Engineers, a group of manufacturers and professionals who know a lot about economics and future industry," technology," he added. "You can't do both teaching and technology.

Technology programs vital to Ohio industry

Due to economic problems, few jobs are available, so many workers have been laid off. While many are wisely looking for new jobs, some are faced with the difficult reality of unemployment. To help these individuals, technology programs are being offered to provide skill development.

Among the many programs available are those in the fields of manufacturing, computer science, and engineering. These programs are designed to give workers the skills they need to be competitive in the job market.

For example, the Manufacturing Technology program at Bowling Green State University offers courses in industrial automation and robotics. The Computer Science program provides courses in programming and software development. The Engineering program offers a variety of specialties, including mechanical, electrical, and civil engineering.

These programs are not only valuable for those entering the workforce, but also for those looking to change careers. Many employers are willing to pay for tuition costs, making it a feasible option for those who wish to continue their education.

In conclusion, technology programs are a vital resource for workers in Ohio and beyond. They provide the opportunity for individuals to gain the skills they need to succeed in today's workforce.

Student SME chapter ‘outstanding’ in the nation

For the first consecutive year, Bowling Green State University members of the Society of Manufacturing Engineers (SME) have been honored as “Outstanding Student SME Chapter.”

The “Outstanding Student Chapter” honor is bestowed by the SME to recognize a particular chapter’s outstanding service to its student members and the manufacturing industry.

Bowling Green State University’s chapter was among 14 students chosen from both technical and non-technical chapters across the United States.

Receptions take University to prospective students

Seven receptions for high school students who have applied for admission will be held this spring at the University's Auxiliary Services at Bowling Green.

More than 1,000 students and 800 parents are expected to attend the receptions, which will be held in Campbell Hall on the Bowling Green campus.

Seven faculty members will attend each reception along with members of the Auxiliary Services.

Personnel office stops accepting open applications

The Office of Personnel Support Services is discontinuing, effective Jan. 29, the Personnel Office's stop accepting applications in person.

Persons interested in any of the positions can apply either by sending written or typed application to the Personnel Office or by completing the application form available at the Personnel Office's stop accepting applications.

Reading consultant headlines conference

John Manning, one of the most widely traveled and respected reading consultants in the United States, will be the guest speaker at this year's annual Early Childhood Conference at the University.

Manning, who teaches reading at the University of Michigan, is a national authority on reading programs and is a consultant to numerous school districts and colleges.

Manning will present a keynote address on Jan. 25 and will be the guest speaker at the conference's annual banquet.

High school students and Bowling Green who indicate an interest in the biological and health sciences and were identified as outstanding high school students on standardized tests were invited to the University on Feb. 9. The students and their parents were guests of the biological sciences department for a day of activities which included a visit to the Mid-America Science Center and other on-campus and off-campus programs.

The students and their parents were given a preview of a documentary on horror films, "Feeling for Good," which will be shown at the Jan. 25 film series.

The decision to make the Personnel Office stop accepting applications was made by the University's Personnel Department.

The Personnel Office's stop accepting applications will be closed on Feb. 12.
