Introduction

This project is comprised of three units on the Japanese occupation of Korea. All are designed for use in high school social studies classrooms. Unit one covers the period from 1876 to 1919, including the build-up to annexation and the first decade of Japanese military rule in Korea. Unit two covers the period from 1919 to 1931, the cultural rule period marked by relatively relaxed and liberal Japanese policies in Korea. Unit three covers the period from 1931 to 1945, the World War II or Fifteen-Year War era. An overarching compelling question anchors each unit, and this unit compelling question is broken down into supporting questions. Each lesson centers around a supporting question. Each unit begins with an overview, with the template taken from Grant, Swan, and Lee (2014). This overview includes the compelling and supporting questions, standards with which the unit aligns, a unit hook or introduction, the main learning tasks of each lesson, the sources with which each lesson engages, the summative performance assessments, and finally an avenue for student action beyond the classroom. Within this document, after each overview the unit introduction or “staging the question” is explained in greater detail. Next follows each lesson, with the sources for it included. The summative performance assessments and call to action are not explained further than what it is in the overview. Within each unit, a key lesson is highlighted. This is the ideal lesson to use from each unit, if educators are short on time. This is explained in more detail in the final overview. Following the three units is the final overview, a short explanatory paper. After this is the full reference list for the project.
Honors Project Final Overview

Multiple problems in the high school social studies education world inform this project. The foremost is the chronic absence of substantive East Asian history from high school social studies curriculum, especially that which prioritizes East Asian voices. For example, the Korean and Vietnam Wars are almost guaranteed attention in an average high school world history course. In this case, both countries’ significance extends to their roles as lands in which a potential fall to communism threatened democracy worldwide, and the necessity of subsequent American interventions is questioned. Undoubtedly both the Korean and Vietnam wars matter to their respective countries’ histories, but other time periods and events exist that warrant equal or even more attention and better prioritize East Asian voices. In Korea specifically, the Japanese occupation from 1910-1945 is a perfect example and one this project explored. The occupation period informs the Korean War, modern Korean nationalism, and ongoing tensions between the two nations. Most significantly, the crucial actors in this time period are Korean and Japanese people. Western voices are relatively unimportant. Therefore, this project sought first to partially solve the chronic absence of substantive East Asian history in high school classrooms by creating three units, fit for secondary classroom use, on the Japanese occupation of Korea. The first research question guiding this project is: How can the chronic absence of substantive East Asian history be solved using developmentally appropriate methods?

Second, the need to align Ohio’s definition of civic education with content guides the project. The second research question is: How can the Ohio Department of Education’s philosophy about civic competence be truly fulfilled in classrooms? Under the philosophy and guiding assumptions in the Ohio Learning Standards for Social Studies’ introduction, Ohio asserts its goal of social studies education as “civic competence.” It defines this as follows: “the
knowledge, intellectual processes, and democratic dispositions required of students to be active and engaged participants in public life” (Ohio Department of Education, 2018, p. 3). Later in the document, this definition gains nuance: “Civic competence rests on a commitment to democratic values, and requires the ability to use knowledge about one’s community, nation, and world…” (Ohio Department of Education, 2018, p. 3). Students should be able to “use knowledge about one’s…world…” (Ohio Department of Education, 2018, p. 3). The idea that true civic competence requires robust awareness and knowledge of global history is implied within this statement.

Finally, several standards under the Modern World History strand for high school are key to this project. The Japanese occupation of Korea may be substantive East Asian history, prioritize East Asian voices, and provide opportunities for fulfillment of Ohio’s social studies education philosophy. However, without alignment to the standards, it means nothing. Fortunately, three content statements under the Modern World History strand deal with imperialism. They fall under the topic of imperialism, and are as follows: MWH9-12.9 states, “Imperial expansion had political, economic and social roots.” MWH9-12.10 states, “Imperialism involved land acquisition, extraction of raw materials, spread of Western values and direct political control.” MWH9-12.11 states, “The consequences of imperialism were viewed differently by the colonizers and the colonized.” Various aspects of the occupation align with all three standards. In high school classes, imperialism is a recurrent topic and the Japanese occupation of Korea provides a unique way to teach it. The occupation not only aligns strongly with all three imperialism standards, but it also fulfills the Ohio Department of Education’s implicit definition of civic competence – that it requires robust understanding of global history. Japan is the only modern example of a major non-white imperial power, and Korea was one of
its longest-held colonies. It represents a fuller alignment of content and philosophy. The final guiding research question is: How can the Japanese occupation of Korea be taught in a manner that is appropriate for high school classrooms?

**Background literature**

To understand the Japanese occupation of Korea, it is useful to begin with the concept of degrees or levels of colonization. Historian Mark Caprio (2009) explores this in his book, *Japanese Assimilation Policies in Colonial Korea, 1910-1945*. Caprio explains that on a scale of external, internal, and peripheral, the Japanese occupation of Korea best fits the “peripheral” definition. Caprio illustrates external colonization through British India. Internal is found in most nation-building or the integration of minorities such as newly freed African Americans in post-Civil War America. In contrast, peripheral colonization is marked by the narrative from the colonizer that the colonized may one day be accepted by the colonizer, but only if they civilize themselves first (pp. 23-25). After establishing Japanese Korea as an example of peripheral colonization, the bulk of Caprio’s book evaluates Japanese attempts to assimilate Koreans as a policy approach in each distinctive period of the occupation: 1910-1919, 1919-1931, and 1931-1945. Caprio ultimately concludes it was unsuccessful due to inconsistencies in rhetoric and actual policy. The Japanese government claimed it wanted Koreans to be assimilated, but the actual commitment to this policy was weak.

One of the most important realms in which Japan could potentially assimilate Koreans was education and schools. Pak and Hwang (2011) argue that Japanese policy on Korean schools evolved throughout the occupation period to fit Japan’s imperial goals and needs. According to Pak and Hwang, schools were the primary Japanese vehicle for eradicating Korean culture and assimilating Koreans into Japanese culture. Korean education focused on the reproduction of
Japanese colonial values and subservience to the empire. Despite the stated goal of assimilation, Pak and Hwang (2011) also argue that Japan was hypocritical as it continued to discriminate against Koreans. Japan characterized itself as the “advanced” country that would modernize “backward” Koreans; this was meant to convince Koreans that subservience to Japan was in their own best interest.

Debates on whether the cultural rule period of the occupation was broadly liberal or broadly conservative and restrictive also exist in the scholarly literature. Caprio argues that a primary goal of the freedoms given to Koreans under cultural rule was to expose them to their own culture so they would realize its inferiority in comparison to Japanese culture (p. 112). Henry Chung also criticizes the limitations of cultural rule, saying that the changes were shallow and oppression of previous decades continued. Prison torture continued, and new freedoms of the press came with limitations and ulterior Japanese motives as well (1921, pp. 272-274).

Other scholars believe that limited but significant freedoms existed under cultural rule. Jun Uchida (2013) claims that in a 1931 push in Seoul for publicly-managed electricity, middle- and upper-class residents created a robust public sphere. Notably, movement participants were both ethnically Japanese and Korean. Further complicating the strict narrative of an oppressive Japan and oppressed Koreans are problems of sexism within the Korean independence movement. Kwon (1998) argues that the three founders of Korea’s brief-lived New Women’s movement were influenced by Japanese feminism and that their activism was a response to the patriarchy found in traditional Confucian culture. After the March First Movement, male independence activists pushed for a return to traditional Korean culture to contrast with Japanese culture being forced upon them. Kwon points out the problematic nature of this, as the sexist Confucianist value of female purity heavily influenced traditional Korean culture and was the
basis of Korean patriarchy. The New Women’s movement aimed to end all such values; male activists saw this goal as a potential threat to maintaining a collective Korean identity distinct from Japanese influence. Before the March First Movement, many had actually supported feminism and the New Women’s movement (1998).

The final important period of study is the war era from 1931-1945. During this time, Korean views and support of Japan varied. Japanese assimilation policy reached its most aggressive point, with policies such as mandatory worship at State Shinto shrines, required changing of family names to Japanese, and banning the speaking of Korean (Pak and Hwang, 2011, 391-392). According to Kim (2007), a portion of Koreans began to positively identify with the Japanese empire. They envisioned Japan as a stronger “big brother” who could protect the weaker “little brother” (Korea) from Western imperialism. Caprio (2009) supports Kim’s assertion that a portion of Koreans positively identified with the Japan. Caprio, however, focuses on economic opportunities for Koreans found in Manchuria after the Japanese annexation of it as a main source of positive Korean identification with Japan.

To answer the project’s research questions, education principles and literature need to be taken into account. The primary education framework used to unit plan is backward design, as outlined by Wiggins and McTighe (2005) in Understanding by Design. Now a cornerstone principle in education, Wiggins and McTighe argued in their book that many educators are mistaken to design activities and learning experiences without explicit reference to learning goals and standards. Instead, educators must purposefully craft learning experiences to move students toward the fulfillment of salient learning goals and standards. Wiggins and McTighe believe that doing so will create more fruitful learning experiences for students. It also ensures that the value and purpose of such experiences are clear to students; if understanding by design is used
correctly, students know why the lesson and strategies chosen matter. Within unit planning, the principle of backward design is key. All lessons, assessments, and activities must be clearly aligned with specific, salient learning standards.

A social studies-specific way to approach backward design is the Inquiry Design Model, which was published by the C3 Teachers and the National Council for Social Studies. Grant, Swan, and Lee (2017) wrote *Inquiry Based Practice in Social Studies Education: Understanding the Inquiry Design Model*. Unit design within this framework begins with a compelling question that should represent issues relevant to students’ lives but also ongoing debates in social studies disciplines. Also, these compelling questions must be arguable from different viewpoints (pp. 37-40). Grant, Swan, and Lee (2017) hold that they are a powerful way to frame and organize otherwise complex, onerous content. They contend that inquiry is a powerful pedagogy that increases student engagement by making content more relevant to them (pp. 35-36). Unit overarching compelling questions are supported by lesson supporting questions. In this framework, students find answers to supporting and compelling questions in a variety of robust social studies sources, making source analysis key. The Inquiry Design Model also calls on students to further increase the relevancy of content to their daily lives; students are to end each unit by “taking informed action.” Students must apply knowledge gained in the unit to real-world problems and take action to solve them (Grant, Swan, and Lee, 2017, p. 65).

**Methods**

Three units on the Japanese occupation of Korea comprise this project. They are designed for use in a high school social studies classroom using the Inquiry Design Model. Each unit corresponds to a major time period in the Japanese occupation of Korea. Unit one covers approximately 1876 to 1919. This includes the build-up to annexation as well as the first decade
of harsh militaristic rule. Unit two covers approximately 1919 to 1931. These twelve years are the “cultural rule” period, in which Japan relaxed military rule and took a relatively liberal approach to Korean rule. The final unit, unit three, covers the period from 1931 to 1945. This was the World War II or Fifteen-Year War era. Japanese expansionism, nationalism, and aggressive assimilation policies enforced upon the Koreans characterize it. Each lesson in the project centers on analysis of a wide variety of social studies sources.

As mentioned above, units designed with the Inquiry Design Model framework include the standards, a unit hook, a unit compelling question, three to four supporting questions, a summative performance task, and a call to student action (Grant, Swan, and Lee, 2014). The project’s first unit centers on the compelling question “Why did Japan annex Korea?” The unit’s three supporting questions break this down further. Supporting question one, which corresponds with lesson one, is, “What was Korea’s role in the Sino-Japanese and Russo-Japanese Wars?” This lesson emphasizes Korea’s critical role in Japanese geopolitical security. Supporting question two is, “How did Korea advance from a protectorate of Japan to a colony?” Here, the different contemporary Korean and Japanese accounts of the 1905-1910 period receive emphasis. Finally, the third supporting question is, “How competently was Korea ruled by Japan during the first decade?” This lesson focuses on the political, economic, and social aspects of the first decade of Japanese rule in Korea. The summative performance tasks consists of two options: an argument and an extension. In both, students construct an evidence-based answer to the unit’s compelling question. The argument for this unit was a 300-500 word essay and the extension was a news clip featuring the student as a newscaster, reporting as if it were 1910 and Japan had just annexed Korea. Students take action by posting their responses online to Japanese claims that Korea was annexed legally.
The project’s second unit builds directly upon unit one. Unit two covers the “cultural rule” period from 1919 to 1931. Its essential question is: “Can freedom exist under an oppressive regime?” The first lesson asks, “What was the March First Movement?” The March First Movement was, in many ways, a direct response to Japanese militarism during the occupation’s first decade. The protests resulted in policy changes from Japan, leading to limited Korean freedoms in the press and education. Lesson two, therefore, centers on the question, “Why did Japan implement the cultural rule policy (bunka seiji)?” In it, students examine the different factors that influenced Japan’s decision to implement cultural rule. Despite the freedoms of cultural rule, scholars debate whether the era represented overall liberation or continued oppression for Koreans. The third lesson engages students in this debate by asking, “Did freedom and oppression coexist under cultural rule?” The unit concludes with the summative assessment; the argument asks students to answer the compelling question in 400-700 words while the extension asks students to write a letter to the editor from a contemporary ethnic Korean’s point of view. Students extend beyond the classroom by filming a YouTube video to spread awareness of the March First Movement outside of East Asia.

Unfortunately, the cultural rule freedoms failed to last. The Fifteen-Year War, or World War II in Asia, represents the most aggressive point of Japanese assimilation and abuse of Koreans for wartime use. The unit forms around the compelling question “Does war justify extreme measures?” The first lesson supports this with the question, “Why and how did Japan’s Korea policy shift with the outbreak of the Fifteen Year War in Asia (World War II in Asia)?” This lesson covers how the Manchurian Incident of 1931 shifts Japan’s concept of Korea’s role in its growing empire as well as the aggressive assimilation policies of the era: mandatory Shinto worship, the name-changing policy, and the banning of the Korean language. The second
question asks, “How did World War II change how Koreans identified with the Japanese Empire?” A portion of Koreans positively identified with Japan during this time, seeing opportunity for themselves if Japan’s empire prospered and grew. The lesson is structured to help students work through any cognitive dissonance resulting from this counterintuitive concept. Finally, lesson three asks, “Was Japan’s wartime mobilization of Koreans justified?” Out of the entire project, this lesson plan undoubtedly deals with the most upsetting, difficult content. Several of the lesson’s featured sources detail the experiences of comfort women - women who were forced into sexual slavery for the Imperial Japanese Army. The unit concludes with two options for assessment; the argument is a 500-700 word essay responding to the unit compelling question and the extension is a short speech responding to the unit compelling question. Finally, students take action by proposing a solution to modern comfort women-based Korea-Japan tensions. Students are asked to post their proposals online in a blog post format. Through their informed action, students engage in a real-world, emotionally charged, and very current issue.

Results

The lesson plans that comprise the project form a part of the solution. Three interrelated research questions guide this project. The first is, “How can the chronic absence of substantive East Asian history be solved using developmentally appropriate methods?” The second is, “How can the Ohio Department of Education’s philosophy about civic competence be truly fulfilled in classrooms?” The third is, “How can the Japanese occupation of Korea be taught in a manner that is appropriate for high school classrooms?” The Inquiry Design Model is a secondary-level appropriate way to frame and organize the Japanese occupation of Korea. This resource for teachers on the occupation period is one small but significant step toward bringing more
substantive East Asian history into high school classrooms and filling the gap. An abundance of scholarly literature on the occupation exists; in contrast, unfortunately very few resources on it designed for high school use exist. For example, lessons by Ryan (2007) and Sill are available for free on the internet, but only cover the build-up to annexation. A brief lesson plan by Miller is easily accessible, but far from substantial. Finally, resources exist from Asia for Educators. They include excerpts from primary documents and document-based questions (DBQs). However, these do not include specific strategies for engaging students in the content. No comprehensive resources designed for high school social studies classrooms exist on the Japanese occupation of Korea. This project seeks to fill that gap by writing teacher and student-friendly units.

The nature of the topic itself helps answer or fulfill the second research question: “How can the Ohio Department of Education’s philosophy about civic competence be truly fulfilled in classrooms?” As stated earlier in this paper, the guiding philosophy of the Ohio Learning Standards for the Social Studies implies that for students to truly be civically competent, they must be globally aware. The Japanese occupation of Korea offers a perfect opportunity for full alignment of the Modern World History imperialism content statements and the Ohio Department of Education’s guiding philosophy about social studies education. Implicit in the philosophy is that social studies strands should be globally inclusive in content. To be globally inclusive of imperialism, the Japanese occupation of Korea must be taught. Japan is the only modern example of a non-white imperialist nation. Not only does the Japanese occupation of Korea offer a chance to examine the nuances of discrimination and race, but it also is incredibly pertinent to modern East Asian politics.
Finally, the units aim to be secondary student-friendly. The third research question is, “How can the Japanese occupation of Korea be taught in a manner that is appropriate for high school classrooms?” The units are organized using the Inquiry Design Model, a method based on the C3 Framework and designed for use in K-12 classrooms (C3 Teachers). A variety of pedagogical strategies are employed, many coming from the text *Bring Learning Alive!,* which details strategies appropriate for all age groups (Bower, Lobdell, and Owens, 2010).

The units are made for secondary students. However, they are explicitly designed for advanced, accelerated, or Honors students. Nearly all of the featured sources in the three units are text-based and advanced in reading level. In addition to this, much of the material is complex. The coexistence of freedom and oppression during cultural rule, for example, is the focus of unit two, lesson two and was rife with possible cognitive dissonance. The lesson plans in this project are not differentiated for lower-achieving students or those with special needs, for several reasons. For many groups of high school students, it is unreasonable to ask them to participate in these lessons as written. However, they can be made more friendly to all types of learners and students.

Incorporating principles of universal design for learning, especially multiple means of representation, would decrease many barriers. A teacher who wants to use this lesson plan but make it appropriate for her classroom of middle to low-achieving students would substitute several of the more difficult text-based featured sources for alternate means of representation. For example, the opening lesson of the project on Korea’s role in the Sino-Japanese and Russo-Japanese Wars could utilize maps, infographics, and videos instead of or in addition to excerpts from historian Andrew Gordon’s book. Especially on the Fifteen Year War era, multiple easily-accessible video resources are available on the Internet. Such sources were omitted from this
project, because it is written with accelerated, high-achieving, and Honors students in mind. They are written with a high aim and without specific differentiation; differentiation without a context is difficult and would lack a clear purpose. Instead, the units are written with a high aim because it is easier to modify lessons to an easier level than it is to modify them to a more advanced level.

For lower-achieving students, the reading level of the featured sources in each unit pose another high barrier to learning. Again, this is not explicitly accommodated within the project. However, accommodations can be made. Software like Rewordify.com is crucial. Instead of teachers searching for new sources, they can use the provided featured sources and Rewordify.com will simplify difficult vocabulary and sentences. Overall, it should lower the reading level, making the sources much more accessible to different types of students.

Finally, the everyday reality of teaching is that time is not one’s friend; there is simply never enough of it. In the average classroom, even an advanced one, there likely is inadequate time to work through all nine lessons that comprise this project. In a course such as an elective East Asian history class, it might be possible. For the average broad-coverage modern world history course, though, it may be impractical to teach all nine. With the time barrier in mind, all nine lesson plans are included in the project to not limit educators seeking to use this resource. The logic is to give teachers as many options as possible. Those wanting to utilize this resource can pick which specific lessons fit their own classroom needs and goals.

If a teacher wants to teach the entire occupation of Korea, but is limited on time, this project is still useful. The lesson plans are designed to flow together as a group of three in each unit. For the most comprehensive learning experience, this is ideal. However, the reality of limited time often does not allow for ideal. Lessons can still stand on their own. The teacher
might choose one lesson plan from each unit. If so, unit one, lesson two; unit two, lesson three; and unit three, lesson three are the most salient from each unit. Unit one’s second lesson features the strongest pedagogy of the unit; students must use higher order thinking skills when participating in a mock townhall debate on whether or not Korea should be annexed. Unit two’s third lesson centers on the coexistence of freedom and oppression. This is the most complex concept of unit two and an ongoing debate among scholars. Most importantly, it is a concept with which students can relate. Especially in the modern day, students are aware that each of us has both privileged and disadvantaged identities. Many will understand this about their own identities. Finally, unit three’s third lesson focuses on the atrocities Japan inflicted upon Korea during World War II. The comfort women of this era are one of the most emotionally charged sources of tension between Japan and Korea today. It remains an annually controversial topic; students in this lesson will experience authentic engagement in a modern real-world issue.

Implications

The units’ overarching themes of racism, colonialism, and oppression are ones which all students can understand. However, the Japanese occupation of Korea adds a distinct layer to the conversation as it contrasts sharply with typical American conceptions of race. The perspective on discrimination provided is distinctly East Asian. In the United States, racial narratives focus on white people versus people of color. The concept of tension and discrimination from two non-white groups is not native to our understanding of race or discrimination. These lessons could open the door to more nuanced, intersectional understandings of oppression.

The Japanese occupation of Korea as a classroom topic also provides a rare opportunity to privilege East Asian and East Asian American voices in the conversation. The racially-based tensions, past and present, between Koreans and Japanese people are ones with which East Asian
and East Asian American students are the most likely to have had experience. Out of all groups of students, it will be most native to their cultures and experiences. Simply put, no one understands it as well as they do. This creates a chance for East Asian and East Asian American students to be the “resident experts” on a race-based topic, which is a rare opportunity. In American conversations on race and racism, East Asian American experiences and voices are often excluded in favor of more high-profile tensions. These high-profile tensions and experiences matter, but East Asian Americans must also receive chances to speak on their experiences. The occupation’s unique nature provides for conversations on the intersectional nature of oppression as well as opportunities to empower East Asian and East Asian American voices.

Also, the mere inclusion of substantive East Asian history taught from an East Asian perspective empowers these students. Too often, East Asian history is only taught when Westerners are involved. For example, the Korean and Vietnam War will undoubtedly receive ample attention in any high school world history course. However, as mentioned earlier, these two countries are frequently reduced to potential victims of the “domino theory” and lands in which we question the necessity of American intervention. In contrast, in the Japanese occupation of Korea, the critical voices are East Asian people – Japanese and Koreans. Westerners and any non-East Asian people play relatively insignificant roles, and it would be difficult to twist the narrative to make it appear that they do. As discussed in the introduction, East Asian American students deserve opportunities to have their voices heard. Also, given the recent rise in hate crimes against Asian Americans and the renewed attention to their experiences, efforts to empower East Asian students are especially needed and timely.
Reflections on Learning

This project’s conception dates back to December of 2018, when I read the book *Pachinko* (2017) by Min Jin Lee. This was when I first learned that the Japanese occupation of Korea happened, and that Koreans were treated poorly during it. Having been fed strict narratives of racism as white versus people of color, it was difficult to understand that Koreans could be discriminated against by people so ethnically similar. The tragic but unique experience of Koreans under Japanese rule immediately fascinated me, and I wished I had learned of it sooner. Nearly two years later, in the fall of 2020, I took a historiography course and spent the semester researching the occupation for that class. Now, in the spring of 2021, the interest first sparked in December of 2018 has extended into a capstone Honors project. Throughout the entire experience, numerous lessons have been learned.

The first lesson came forward throughout the background research process that occurred during historiography. It is that discrimination and racial tensions extend far beyond the simple narrative of white people versus people of color. Numerous examples exist around the world of violent ethnic tensions between two non-white ethnic groups, and the occupation is one of them. Students in America and other Western countries need a more global understanding of racism and ethnic tensions. I learned this lesson personally, but plan on carrying it forward into my future classroom. It is ignorant to think, and teach our students, that racism can only exist between white people and people of color. This narrative is perhaps unintentional but created by lack of teaching more global examples of racial and ethnic tensions. I will intentionally teach a more complex and globally inclusive perspective on racial tensions.

Second, audience matters. This lesson was learned through the unit design process. One’s audience will and should influence the way information is presented. While I knew this already,
designing the units made it especially clear. During the background research process, I encountered many rich scholarly sources. They contained fascinating, esoteric information and analyses, which I anticipated sharing with students. However, it quickly became clear that much of that information and knowledge did not fit learning goals that were appropriate for a high school social studies classroom.

Third, clear goals are crucial to focused work and lesson plans. Goals as well as content must be appropriate for the audience. For high school students, this meant simplifying learning objectives I would expect of myself as an undergraduate student. For example, I might expect myself to know the nuances of Government-General relations with the Korean press under cultural rule. However, I would not expect high school students to learn this. While students are exposed to it through Yong-Jick Kim’s (2013) book chapter in unit two, lesson three, they are only asked to broadly understand and be able to explain the coexistence of freedom and oppression under cultural rule.

Clear goals ensure strong alignment of all aspects of a lesson and a unit. With such a vast amount of potential content on the occupation, it was critical that I wrote strong learning objectives and minded them through the design process. For example, the decision to include or exclude sources, or portions of them, was made based on whether or not the information would advance students toward the learning goals. All decisions were made with the learning objectives in mind.

The final lesson learned is that rich extensions of class work are feasible. Whether or not they occur is dependent upon the student’s willingness to complete extra work. When researching the occupation for historiography, I knew I wanted it to extend into my Honors project. However, I had significant doubts as to the feasibility of completing it in a semester and
was initially reluctant to try. Although I genuinely enjoy learning and extending it beyond the classroom, I might not have created the units without the requirement to complete an Honors project to graduate. After nearly completing the process, I can see that it was feasible for me intellectually and time management-wise from the beginning. The only barrier was my willingness to complete extra work.

Not only was it feasible, but the process has created several rich learning opportunities for me. These include a possibility of speaking at a conference and co-authoring a journal article. If I had remained hesitant, none of these opportunities would exist. This lesson matters on a personal level because my work ethic and sense of self-efficacy have been strengthened. However, it is even more important to my future students. Many of my students will wish to seek out opportunities for academic enrichment, such as dual enrollment courses, summer camps and seminars, and jobs or internships. Most will be capable of achieving such experiences, but the difference between whether or not they occur will lie in how much extra work they are willing to complete and how capable they believe they are. I plan on empowering my students to “go the extra mile” and seek enriching learning opportunities. Being able to speak from personal experience will increase will increase my credibility when trying to empower my students.

Overall, the process of completing my Honors project has left me with several key lessons that will be salient moving forward for both myself and my students. Just through the process of completing it, my self-efficacy has been increased and I know I can now better empower my students to seek extended learning opportunities. Studying a nuanced example of imperialism strengthened my resolve to teach globally inclusive narratives of history. Finally, the process of designing the units reminded me of the importance of audience and strong goals in
education. The units designed will serve high school students academically, and the lessons learned through creating them will serve me professionally.

| **Standards and Practices** | MWH.9-12.9: “Imperial expansion had political, economic, and social roots.”  
MWH.9-12.10: “Imperialism involved land acquisition, extraction of raw materials, spread of Western values and direct political control.”  
MWH.9-12.1: “The use of primary and secondary sources of information includes an examination of the credibility of each source.”  
MWH.9-12.2: “Historians develop theses and use evidence to support or refute positions.”  
MWH.9-12.3: “Historians analyze cause, effect, sequence, and correlation in historical events, including multiple causation and long- and short-term causal relations.” |

| Staging the Question | Students will view the map on the next page, showing the scope of the Japanese empire in 1914. The teacher should ask students what they notice that is different than expected about the map (that Korea and Japan are the same color). The teacher will read/review the news article linked on the next page with the class as well. The map will introduce students to the idea that Korea was once occupied by Japan, and the news article will show the continued relevance and controversy of this time period. |

### Summative Performance Task

**Argument**
Students will construct a brief written essay (300-500 words) answering the unit compelling question: Why did Japan annex Korea? Students should cite specific evidence from the sources in answering the question.

**Extension**
Students will film and edit a mock news clip, 3-5 minutes in length, featuring themselves as the newscaster. Students should report as if it were 1910 and they had just received word that Japan annexed Korea. In the clip, students should not only report but also answer the compelling question.

### Taking Informed Action

Students will write an individual response to Japan’s claims that the annexation of Korea was legal, detailed in the news article used in the unit staging the question. Students will decide their stance in agreement with, against, or in partial agreement with the sentiment expressed. Students will construct a blog post of 500-700 words and post it using a platform such as Wordpress, Google Sites or Wix.

The unit design template is by Grant, Swan, and Lee (2014) from the C3 Teachers. Grant, Swan, & Lee (2014). *IDM Working Blueprint Template*. C3 Teachers. [https://c3teachers.org/inquiry-design-model/](https://c3teachers.org/inquiry-design-model/)
Staging the Question

Map of Japanese Empire in 1914

Unit 1, Lesson 1

Note: Designed for a standard 50-minute class period

Objectives:
- SWBAT understand the Japanese motivation to annex Korea, including prior Japanese involvement in Korean affairs and the debate between protectorate versus colony.
- SWBAT construct an argument supported by evidence found in both primary and secondary sources.

Standards:
- MWH.9-12.9: “Imperial expansion had political, economic, and social roots.”
- MWH.9-12.1: “The use of primary and secondary sources of information includes an examination of the credibility of each source.”

Lesson compelling question: What was Korea’s role in the Sino-Japanese and Russo-Japanese Wars?

Hook (response group):

Time allotted: 5-7 minutes
- Students will be presented with the following quote, projected or written on the whiteboard and read aloud by the teacher:
  - “Korea is a dagger pointed at the heart of Japan.” -Major Jacob Meckel, Prussian military advisor to Japan, c. 1885-1888
- The teacher will ask students why Major Meckel might have said this to Japanese officials. The teacher should follow up with asking students if they think Korea truly posed a threat to Japan, and if so, why. To aid in the discussion, the teacher will display the map attached at the end of this lesson.

Body (30-35 minutes):
- MOTU source analysis demonstration (10 minutes): The teacher should project the following worksheet from the National Archives and Records Administration on the board. It lays out the MOTU method of source analysis developed by the NARA. Link here: https://www.archives.gov/files/education/lessons/worksheets/written_document_analysis_worksheet.pdf. The teacher will use a small portion of featured source 1, perhaps the first two paragraphs, to demonstrate how students should use this method to analyze sources.
- Small group MOTU source analysis (15-20 minutes): The teacher will split students into small groups of 2-4. Students will perform the MOTU source analysis method for each featured source of the lesson. The teacher should tell students they should pay particular attention, of course, to Korea’s significance in both wars. Students should be prepared to share out after completing the small group MOTU activity.
- Response groups (5-10 minutes): On the whiteboard or SmartBoard, the teacher will create two columns, one with the heading Sino-Japanese War and the other with Russo-Japanese War. Students will provide their responses on Korea’s role in each war, and the teacher will help clarify comments. As students provide responses, the teacher will write them on the board under the appropriate column. Once 3-5 answers have been provided, the teacher should move on to the next war.

Closure (10 minutes):
• **Large group debrief:** The teacher will add a “bottom line” to each war on the chart on the board, and a “bottom line” for the overall lesson. The teacher will ask students what they think the “bottom line” or most important reason for Korea’s involvement in the Sino-Japanese and Russo-Japanese Wars was. The teacher will fill in the “bottom line” sections with student responses. Finally, the teacher will wrap the lesson by asking students if they still think Korea was truly a dagger pointed at the heart of Japan. Students will complete the exit ticket, summarizing in approximately 2 sentences per war why the Korean peninsula was involved.

• The teacher should also assign homework for the following day: Complete MOTU analysis of the two featured sources for lesson two of the unit.

**Sources:**
Both excerpts taken from:

**Source 1 (pp. 119-120):**
"After the Li-Ito agreement in 1885, the Japanese government kept a low profile in Korea for nearly a decade. The Chinese gained control by stationing ‘advisors’ at the Korean court to reform the Korean military and communications network. In addition, Russian diplomats won increased influence at the court, where some Koreans viewed them as a counterforce to excessive Chinese authority. This, in turn, led the British to occupy a small island off the Korean coast. The British demanded that Russia pledge to respect Korean territorial ‘integrity’ before they withdrew in 1887. The United States also joined the contest for influence in Korea. Several Americans served as foreign affairs advisors to the throne from 1886 into the 1890s.

With foreign powers pressing from all directions, Korea’s own leaders desperately maneuvered to gain some breathing space and independence. This proved impossible. In the early 1890s, long-simmering peasant anger at economic distress and the foreign presence erupted in a major uprising, the Tonghak rebellion. In 1894, this led directly to a war between Qing dynasty China and Japan, fought in Korea.

The Tonghak was a religious movement whose adherents blamed their impoverished plight on both the Korean elite and foreigners – the Japanese in particular but the Chinese as well. By the spring of 1894, Tonghak rebels had taken control of much territory and a major provincial capital, and the Korean government asked China to send troops to put down the uprising.

The commitment of Chinese troops gave the Japanese government an opening it was hoping for, leading to the outbreak of the Sino-Japanese War of 1894-95. Japan’s military buildup had by now given it a rough naval parity with China. Yamagata Aritomo and other top leaders decided the time had come to secure the upper hand in Korea. In the name of ‘protecting Japanese residents,’ in June 1894 they sent eight thousand troops to Korea and demanded an equal voice with China in administering Korea’s internal affairs. The Chinese refused. Japan responded in July by seizing control of the Korean royal place and installing a pro-Japanese administration. It forced this government to announce the end to its tributary relationship with the Qing rulers and to demand the withdrawal of Chinese military forces from Korea. In the name of cooperation with this puppet Korean government, the Japanese military forces then in Korea attacked the Chinese military and several days later declared war on China.

The Sino-Japanese War was in this way a struggle for control of the Korean peninsula fought between Japan and the Qing rulers of China. It consisted of some land battles but
primarily naval engagements. It ended in complete Japanese victory by April 1895. In the peace treaty concluded at the Japanese port of Shimonoseki, Japan made clear its aspirations for an area of advantage well beyond Korea. It won control of Taiwan and some nearby islands, as well as the Liaodong peninsula. Taiwan indeed became a Japanese colony, although not at the simple stroke of a pen. Japan had to send an army of sixty thousand troops to put down fierce Taiwanese resistance to Japan’s initial colonial occupation, and forty-six hundred Japanese troops died from combat or disease.”

Source 2 (pp. 123-124):
“From 1895 through the early 1900s, Korea remained their primary strategic concern. The Shimonoseki treaty of 1895 forced China to recognize Korea as an ‘independent’ state. With this provision, the Japanese expected to keep the Chinese at bay. But the forced retrocession of the Liaodong peninsula immediately after the war also put at risk Japan’s position in Korea. Korea’s Queen Min, previously close to China, turned to Russia for support in countering Japan’s influence. But in October 1895, in an extraordinary act of insubordination, the Japanese envoy to Korea, Lieutenant General Miura Goro, and his legation staff brutally murdered the queen and several of her court ladies. The Japanese government subsequently recalled Miura to Japan and accused him of murder, but the courts deemed the evidence insufficient to even put him on trial.

Although not a party to the murderous conspiracy itself, the government in Tokyo supported the goal of maintaining the upper hand on the peninsula. In the following years, Japan tried to dominate the Korean government by stationing advisors in Seoul to administer Meiji-style reforms. But Korean leaders were unhappy with Japanese control and the direction of reforms. They continued to play foreign powers against each other by turning to Russia for help. Over the next decade, the Russians came to rival the Japanese position in Korea. They challenged it in Manchuria as well by seizing the leasehold for Dairen at the tip of the Liaodong peninsula in 1898. Japanese leaders responded with several initiatives to regain control in Korea and establish themselves as an imperial power in Asia. In 1900-01, Japan sent ten thousand troops to China – the largest single national contingent – to join the multinational force that put down the Boxer Rebellion...

In the wake of the Boxer uprising, the Japanese drew closer to the British, while the Russians kept their troops in Manchuria and sought to extract further exclusive concessions from China before leaving. The Japanese and British formalized their cooperative ties with an alliance in 1902. By this agreement, the British recognized Japan’s special interest in Korea. Each nation pledged to aid the other if Russia and a fourth party attacked either one. Such a combined attack never took place. Nonetheless, with a colony in Taiwan, troops in Peking, and an alliance with the British Japan had secured a place as one of Asia’s imperial powers.

Over the next several years, Japanese leaders sought above all to solidify hegemony in Korea. One option viewed with favor by Ito Hirobumi in particular was a diplomatic deal with the Russians. Japan would grant them primacy in Manchuria if they would retreat in Korea. Through 1903, the government negotiated in a halfhearted way with Russia. In fact, Japan was unwilling to concede full control of Manchuria to the Russians and the latter were equally insistent on maintain a Korean presence. In addition, political parties, journalists, and leading intellectuals, including a group of prominent Tokyo Imperial University professors, held rallies and issued increasingly forceful calls for war. This strengthened the hawkish voices among the Japanese negotiators...By February 1904, the Japanese government had decided to secure its
position in Korea as well as Manchuria by force. It declared war on Russia. This began the Russo-Japanese War, Japan’s second major military struggle over Korea in a decade…

In May 1905, the Japanese oligarchs secretly asked the American president, Theodore Roosevelt, to mediate. A treaty of peace was negotiated at Portsmouth, New Hampshire, and signed on September 5, 1905. The settlement reflected the uncertain military situation. The Japanese gained control of Russian railway lines in southern Manchuria and took over Russian leases in two Manchurian ports as well. They also won recognition of their exclusive rights in Korea. But aside from territorial rights on the southern half of the virtually uninhabited Sakhalin island, Japan emerged with no outright gains of land and no financial compensation. This contrasted sharply with the Sino-Japanese War. Fed a steady diet of news celebrating victories in battle, and unaware that Japan was militarily and economically stretched to the limit, public opinion at home was severely disappointed.

Nonetheless, Japan was now clearly in control of Korea. Its advisors, in fact, ran the government. The Japanese army, through the office of resident general, administered Korean foreign relations. The resident general increased his power in 1907 when Japan forced the Korean monarch to resign and disbanded the Korean army. Japan then annexed Korea outright as a colony in 1910. The position of resident general was replaced by that of governor general, appointed by the emperor. Until 1945, the colonial administration under the governor general held complete military, judicial, legislative, and civil authority in Korea.”

Map to be used in hook:

Objectives:
- SWBAT analyze primary sources to evaluate the bias, reliability, and value of a source.
- SWBAT describe and analyze how Imperial Japan transitioned from indirect control of Korea as a protectorate to direct control as a colony.
- SWBAT compare, evaluate, and reconcile potentially conflicting views and experiences – in this instance the Japanese and Korean views on events of the late 19th and early 20th centuries.

Standards:
MWH.9-12.10: “Imperialism involved land acquisition, extraction of raw materials, spread of Western values and direct political control.”
MWH.9-12.1: “The use of primary and secondary sources of information includes an examination of the credibility of each source.”
MWH.9-12.2: “Historians develop theses and use evidence to support or refute positions.”

Lesson compelling question: How did Korea transition from a protectorate of Japan to a colony?

Hook (5-10 minutes):
- Homework review/review for preview (5-10 minutes): The teacher should briefly review the MOTU source analysis homework with students. The teacher should review broadly the main points students should have covered in each category of the MOTU analysis for both sources. Teachers should ensure they cover several salient points in their review. First, the author of featured source A is Terauchi Masatake, who was the first Governor-General of Korea and known for his militaristic rule. He was also the War Minister of Japan during multiple cabinets and held the office of Prime Minister during World War I. There are multiple members of the Korean Mission to the Conference on Limitation of Armament. Their names can be found in the beginning of the document; one is Syngman Rhee, the eventual first President of South Korea. Also, the conference that the group was appealing to was the infamous Conference on Limitation of Armaments held in Washington, D.C. from 1921-1922. It is also known simply as the Washington Naval Conference.

Body (35 minutes):
- Concept Map activity (20 minutes): Students will be creating a concept map on the whiteboard detailing what they view as important points or moments in the transition of Korea from protectorate to colony of Japan. Each student will receive a dry-erase marker with which to write on the whiteboard. The teacher should separate the board horizontally, with the top half labeled as being dedicated to the Japanese view, and the bottom half labeled as being dedicated to the Korean view. During the activity, students will go up to the board and leave answers as they please – each student must answer once, but there is no limit. Students may write their own “independent” points or respond to/build off of other students’ points, showing the connection via arrows. Students could also link two points from other students and provide their own personal commentaries.
- Large group debrief (10 minutes): All students will return to their individual seats. The teacher will first circle/star points he or she finds especially important. The teacher will pose the following to students: “If you could narrow down the transition from protectorate to colony to 3 main points per side (Korean/Japanese), what would those points be?” Students will raise their hands to provide answers. As students provide
answers, the teacher will write them on the board. Finally, once all answers have been
provided and written the teacher should briefly verbally review them.

- **Response groups (5 minutes):** The teacher should pose questions along the following
lines: “What accounts for the differences between the Korean and Japanese accounts of
events? Is one side right or wrong? Can these accounts be said to complement each
other? Conflict with each other? Both? What is each side’s agenda?” Students will
voluntarily provide answers.

**Closure (10 minutes):**

- **Exit ticket and homework (10 minutes):** Students will complete an exit ticket by
writing or typing and submitting answers via an online learning platform like Google
Classroom. Students will summarize in 3 bullet points the transition from protectorate to
colony. Students should respond with what they personally view as the 3 main takeaways
from this time period.

- While students complete the exit ticket, the teacher should also assign homework for the
next day. Students should review MOTU sheets from all sources thus far. The teacher
should also tell students the following day will be a mock townhall argument. All
students should prepare a brief argument either for or against the annexation of Korea by
Japan. Students should be prepared to verbally defend their positions using specific
evidence from sources used thus far.

**Sources:**

**Source A:**

Excerpt taken from pp. 220 - 224

“Japan was again compelled to engage in a costly war, this time with Russia, largely on
account of Korean affairs. But Japan had now realised that Korea was not capable of governing
herself, and that the policy of maintaining her independence could not be pursued without certain
modifications. Indeed, as the Resident-General declared in a speech made in July 1907,
‘The identity of Korean and Japanese interests in the Far East and the paramount character of
Japanese interests in Korea will not permit Japan to leave Korea to the care of any other foreign
country: she must assume the charge herself.’

Thus Japan took the responsibility of intervention in Korean affairs, after having given
the Koreans ample opportunity to prove their fitness for self-government, and after having found
them wholly unprepared for the task. Subsequently to the outbreak of war with Russia, Japan, by
successive agreements, obtained entire control of Korea’s foreign affairs. This fact being
afterwards recognised by the other Treaty Powers, they duly withdrew their diplomatic
representatives from Seoul. With respect to domestic affairs, Japan has assumed advisory
supervision of the general administration, but, in military matters, if ‘the welfare of the Imperial
House or the territorial integrity of Korea’ is endangered by the aggression of a third Power, or
by internal disturbances, Japan is to have direct control…

In addition to assuming direct control of Korean affairs, the Resident-General,
representing the Japanese Government, commenced faithfully to exercise his advisory functions
in the general administration. As to the details of his procedure, he caused the Korean
Government to engage a number of Japanese advisers, councilors, or assistant-councilors, both
for the Imperial Household and for the various Departments of State, in addition to a financial
adviser and a diplomatic adviser, who had been engaged before the establishment of the
Residency-General. Technical experts were also engaged for the public works and for the model experimental farms where instruction was given in industry, agriculture, and forestry. In matters relating to the reform of local administration, it was arranged that the Vice-Residents of the Japanese local Residencies should act as councillors to Provincial Governors; and Finance Councillors were distributed among the thirteen provinces to act as advisers to the Provincial Tax Supervisors...For the administration of justice, a Japanese legal councillor, or assistant-councillor, was attached to each of the courts, local and high, in Seoul and to each of the courts in the Provincial Governments as well as to magistracies of prefectures and districts. Thus no radical changes were introduced into the old Korean administrative organisation. On the contrary, the Resident-General tried to improve the existing Korean administration by general guidance under the various Japanese advisory bodies. The Central Government had competence to enact any necessary laws and ordinances for reform measures, and to instruct Local Governments to act in accordance with advice, while local officials were expected to pay due attention to advice given by the Japanese councillors.

But the operation of this system proved unsatisfactory, owing to the fact that the Korean officials paid little respect to the advice given, so long as they were free to adopt or reject it at will. Moreover, the incapacity of Korean officials and the habitually crooked methods of the Korean Government greatly handicapped the success of the projected programme. Thus it resulted that advisory guidance had practically little or no effect in bringing about the desired changes in the old-time maladministration of affairs. So many evils and abuses had taken root that more direct management on the part of the Resident-General, together with some modifications in the Government organisation and the employment of capable officials, became vitally important, since otherwise the welfare and prosperity of the Korean people could not be promoted. These experiences and considerations compelled the conclusion of a new Agreement. It was signed on July 24, 1907. By it the Resident-General was given more direct participative power in the general administration. He acquired initiative as well as consultory competence to enact and enforce laws and ordinances, to appoint and remove Korean officials, and to place capable Japanese subjects in the ranks of Korean officialdom. The Agreement provided specially for differentiation of the Judiciary and the Executive, as much corruption existed under the old system which invested both the provincial governors and the district magistrates with judicial functions.”

Source B:

“The treaty terminating the war with Russia was consummated at Portsmouth in September, 1905, and its was no sooner signed and out of the way than Japan began her aggressive activities in Korea. A treaty establishing a protectorate by Japan over Korea was prepared and Marquis Ito was sent to Seoul to secure its signature. For days he importuned the Emperor and the cabinet ministers to carry out the will of his imperial autocratic master, but they flatly refused. There were stormy sessions. Threats and cajolery were used to no avail; finally it was apparent that more vigorous methods must be adopted.

The palace was a second time surrounded by Japanese troops and was invaded with swaggering officers and their conspicuously armed guards. The Emperor and the ministers had
been assembled at the peremptory order of Marquis Ito. They were argued with en masse with no result, and then the three ministers who were the most outspoken in their condemnation were taken out, one by one. Japanese officers returned, sheathing swords and buckling holsters, saying to those who still sat in council, ‘Now will you sign?’ The Emperor and his remaining ministers had every reason to believe that their absent colleagues had become martyrs to Korean freedom as had their beloved Queen Min. Still they stubbornly refused.

The details of this conference have been recorded in numerous historical works. They are common knowledge. The protectorate treaty never was signed or legally executed, although Japan announced to the world that it had been. Even if actually signed, it would still be invalid because of personal duress.

There were present at the opening of this conference on behalf of Korea the Emperor and his eight ministers: Hahn Kin-sul, premier; Park Chee-soon, vice premier and minister of foreign affairs; Min Young-kee; Lee Ha-young; Yi Won-yong; Yi Kun-tak; Yi She-yong; and Kwon Choong-hyun. The status of the ministers was, of course, advisory. The final decision and the execution of the document was rested with the Emperor. The Emperor did not sign, nor was he ever advised to sign by a majority of his ministry.

The Three Yi’s did sign. One of their rewards for this act of treachery to Korea was that Yi Won-yong was given the title of count, with a bribe of 1,000,000 yen ($500,000). It is claimed that Lee and Kwon consented without signing. Others claim that these two simply refused to participate. In any event, the Emperor, the premier, the minister of foreign affairs, and Minister Min did not sign or acquiesce in the protectorate in any manner or form, but were all outspoken and courageous in their denunciation and repudiation of the acts of the Japanese.

The Imperial Government of Japan reported this thing consummated on November 17, 1905, and the world for the time being accepted this misstatement as the truth. It was plausible enough, for the traitor, Yi Won-yong, fraudulently signing himself as acting minister of foreign affairs, although Park Che-soon was the minister, instructed Kim Yun-chung, another Korean traitor, then stationed at Washington as charge de affaires for Korea, to announce the treaty to the United States and to turn the legation over to the Japanese. This Kim did, and returning to Korea was rewarded by Japanese for his treachery by being made prefect of Chemulpo, later counsellor in Chula Province, and was given a vast estate of several thousand acres.

Secretary of State Root had no means of knowing, at the time, that Japan’s statement of the signing of the protectorate treaty was untrue, nor that Yi Won-yong and Kim Yun-chung had been bribed to misrepresent the facts to him, and accordingly recognized the Japanese protectorate of Korea and withdrew the diplomatic representatives of the United States to Korea. In the meantime the Emperor had become convinced by the attitude of Japan of its ultimate purposes and in October, 1905, had dispatched his faithful friend and confidant, Prof. Homer B. Hulbert, an American, to Washington with a protest to the United States and asking its aid and ‘good offices.’ Prof. Hulbert arrived in Washington almost on the very day it is alleged the treaty was signed. It was useless for him to attempt to get Kim Yun-chung, the acting chargé de affaires for Korea, to present the protest, because the chargé was in Japan’s pay, and he was delayed in seeing Secretary Root until after the formal recognition of the Japanese protectorate had taken place. He did finally see Secretary Root, however, but under the circumstances was not formally received as a representative of Korea. The protest of the Emperor was delivered to the State Department and simply became a part of its confidential files. The next day Prof. Hulbert received a cable from the Emperor denying the execution of the protectorate treaty and it was
promptly delivered to the State Department and it, too, became a part of the files of the department.

After the announcement of the protectorate the Emperor for all practical purposes was a Japanese prisoner, confined in his own country. No one, except that he was a pronounced pro-Japanese, was allowed to see him. Seasoned and experienced correspondents from the leading world’s newspapers were sent to interview him, but without success. Prof. Hulbert, his faithful friend, did manage to see him in spite of Japanese espionage, and the Emperor delivered to him credentials to the powers with which Korea had made treaties, reciting the fraudulent character of the protectorate and asking the ‘good offices’ of those nations to assist Korea in her predicament. However, Prof. Hulbert, alone and unaided, could not accomplish a great deal, except to persist in his efforts to inform the world, in season and out, of the fraudulent character of Japanese usurpation in Korea. This he did with a faithfulness and self-sacrifice that we may expect from a red-blooded American, fighting for the weak and oppressed.

Japan sought to, and for all practical purposes did, vitiate the credentials issued to Prof. Hulbert and the envoys to The Hague conference, by announcing the abdication of the Emperor who had signed the credentials. Those who believed the announcement, of course, considered the credentials automatically canceled. This announcement was made July 19, 1907, and five days later, on the 24th, the subsidized Korean traitor, Yi Won-yong, purporting to act for Korea, signed a treaty with Marquis Ito, representing Japan, turning over to Marquis Ito, as Japanese resident general the entire governmental functions of Korea, internal and otherwise.

It is impossible to believe, in view of the Emperor’s attitude and many public protests, that the Emperor ever actually and of his own volition consented to any of these acts that Japan announced that he had promulgated. In any event, on the theory that ‘dead men tell no tales,’ he was poisoned on January 24, 1919. His death was kept a secret or some days and finally it was officially announced that he had died of apoplexy.

The crown prince was an unfortunate — a mental deficient — and being born of Queen Min in those troublesome times preceding her murder he came into the world with no chance. The very terrors and ordeals through which his mother had passed were to shield him. He was born without means of ordinary comprehension and he believes to - day the irrefutable proof before the world by which it will condemn Japan's duplicity.

Japan did not balk at making use of this unfortunate to further her purposes. Late in August, 1907, after the Japanese had announced the abdication of Emperor Yi, the crown prince was crowned Emperor, ‘amid the sullen silence of a resentful people.’...

He was known throughout the world as the ‘puppet Emperor,’ and, of course, the Japanese did with him as they willed. Edicts were issued in his name that probably never saw, or, seeing them, could not comprehend beyond the bright red seals and yellow ribbon.

The first order was to disband the Korean army, small as it was and as helpless as it was, with the more numerous Japanese troops occupying all places of vantage. The different detachments were ordered to report at a given point ‘without arms,’ and the order of disbandment was read to them. Many of them refused and fought with bare hands. They were shot down, dying as a final protest against this usurpation of their country's freedom.

Eventually the Japanese tired of the red tape necessary to continue the form and pretense of a Korean Government with this unfortunate puppet Emperor and in 1910 came out boldly with their rescript of annexation.

Of course, this was their objective and their intention from the beginning. Yet up to the very day of annexation they had always denied it to the world. At each aggressive step plausible
excuses were give, and the nations of the world were reassured time and again that Japan had no intention of finally annexing Korea. Marquis Ito, the first governor general, characterized ‘all annexation talk as absurd’ and this cry was taken up and reiterated by all Japanese officials and diplomats with a perfect hypocrisy that misled the world.”
Unit 1, Lesson 2, Day 2

Note: Designed for use in a standard 50-minute class period

Objectives:
- SWBAT construct an argument supported by evidence found in both primary and secondary sources.
- SWBAT evaluate the validity of arguments based on evidence cited and logical strength.

Standards: MWH.9-12.2: “Historians develop theses and use evidence to support or refute positions.”
MWH.9-12.9: “Imperial expansion had political, economic, and social roots.”
MWH.9-12.10: “Imperialism involved land acquisition, extraction of raw materials, spread of Western values and direct political control.”

Lesson compelling question: How did Korea transition from a protectorate of Japan to a colony? Was it logical for Japan to directly annex Korea as a colony?

Hook (5-8 minutes):
- You-are-there/simulation (5-8 minutes): The teacher will ask students to imagine the following situation: They are in the year 1909 and are thoroughly informed of Japan’s activities in Korea over the past 15 years. Japanese officials are unsure whether Korea’s status as a protectorate will be adequate enough to ensure geopolitical security. As such, top officials have decided to host a townhall. Students will present arguments for or against Korea’s annexation as if they were presenting them to Prime Minister Katsura Taro, Korea’s resident-general Ito Hirobumi, or any grouping of high-ranking Japanese officials. The teacher will split students into two groups – group A will present arguments for either position, and group B will carefully listen and decide on a “wining” side. Group B will vote on whether or not they would annex Korea if they were Japanese officials, on the basis of their peers’ arguments. Students presenting in Group A must cite specific evidence from sources presented in lessons 1 and 2. The teacher should initially ask for volunteers for group A, but if too few students volunteer then he or she should choose students at random to even out the group numbers.

Body (30-35 minutes):
- Mock townhall discussion (30-35 minutes):
  - The teacher should have a podium, stand, or designated spot for each student in group A to stand while arguing their positions. Each student should be granted roughly an equal amount of time. If there are, for example, 10 students in group A then each student should receive approximately 3-4 minutes to make their cases. Regardless, students should have enough time to thoroughly develop a point but must do so concisely.
  - Students in group A must inform the teacher in advance of which side they plan to argue.
  - Students in group A will present their arguments, and the teacher will act as timekeeper. If possible, the arguments presented should alternate sides each time. When a student presents an argument against annexation, it should be followed by an argument for annexation, and so on.
  - While group A presents arguments, students in group B should be taking careful notes. They should note evidence cited, logical fallacies, strengths of students’ arguments, and the “bottom line” of why each presenter believes his or her position is correct.
  - After all students in group A have presented, students in group B should receive approximately 5 minutes to confer with one another and discuss a winner. The vote does
not need to be unanimous, but students do need at least a 2/3 majority (or similar appropriate ratio, depending on the number of group members).

**Closure (10 minutes):**

- **Large group debrief (10 minutes):** Students in group B will share their decision with the class. The group should have one spokesperson share the vote either for or against annexation. After sharing, the teacher should ask other students in group B to share why they chose to vote that way. If any students from group B did not vote in the same manner as the majority, they should also verbally share why.

- Finally, the teacher should ask students what they felt the strongest argument points were. Teachers should also ask students if and how any arguments presented changed or altered their personal opinions. Students should elaborate on how their opinions were altered (contrast between old and new) and what specifically in the argument altered their opinions.
Unit 1, Lesson 3

Note: Designed for use in a standard 50-minute class period

Objectives:

• SWBAT describe the main political, social, and economic characteristics of the first decade of Japanese rule in Korea.
• SWBAT explain the difference in treatment of Koreans and Japanese during the first decade of Japanese rule in Korea.
• SWBAT construct an argument supported by evidence found in both primary and secondary sources.
• SWBAT analyze primary sources to evaluate the bias, reliability, and value of a source.

Standards:
MWH.9-12.10: “Imperialism involved land acquisition, extraction of raw materials, spread of Western values and direct political control.”
D2.His.4.9-12: “Analyze complex and interacting factors that influenced the perspectives of people during different historical eras.”

Lesson compelling question: What were the political, social, and economic characteristics of the first decade of Japanese rule in Korea?

Hook (5-10 minutes):

• Post-it/whiteboard activity (5-10 minutes): Prior to class, students should have read all featured sources for the lesson and underlined/noted important points. At the beginning of class, each student will receive a dry-erase marker or write their answers on a Post-It note. Students should write directly on the board or on a Post-It one major point from the reading they found important. Students may write as many answers as they wish, but every student must supply at least one response.

Body (30-35 minutes):

• MOTU source analysis review (5 minutes): The teacher will briefly review each source with students using the MOTU method. The teacher will project a copy of the MOTU worksheet on the board, an annotate it either by typing on the document or writing using SmartBoard electronic pens. The teacher will review each letter of the MOTU acronym, and ask students for voluntary responses.
• Fishbowl discussion (25-30 minutes): Students will be split into two groups, and desks or chairs should be arranged so that one group of students can sit in the “in” circle that is actively discussing and the other group can sit in the “out” circle or group that is actively listening. To prepare for this discussion, the teacher should ask students to review important points they found in the readings. Students might also think of discussion questions they wish to pose. The teacher should begin the discussion by posing the question, “How competently was Korea ruled by Japan during the first decade?” Students must point to specific evidence in the sources during the discussion, and ensure that they cover political, social, and economic factors during the conversation. Finally, students should keep in mind the previous MOTU analysis activity just completed. Round 1 will consist of group 1 actively discussing for 8 minutes, then group 2. For round 2, the teacher should begin by posing the questions, “How does the first decade of Japanese rule of Korea compare and contrast with traditional examples of imperialism? How does it contrast with typical notions of race and discrimination?” Discussion of topics from the previous round may continue into this round as well. Each group will receive 5 minutes for discussion in round 2.
Closure (5 minutes):
- **Large group response (2-3 minutes):** The teacher will ask for brief student responses on the “main takeaway” from the lesson.
- **Exit ticket (remainder of class period):** Students will write a 3-4 sentence argument in response to the supporting question, making sure to address political, social, and economic aspects of Japanese rule in Korea. These will be turned in to the teacher before the class period ends, either on paper or digitally.

**Sources:**

**Source 1:**

Excerpt 1, taken from p. 64:
“Habeas corpus is unknown in Korea, and every man is considered guilty until he proves his innocence. The law courts in Korea are part of the administrative system under the Governor-General. The judiciary, instead of being independent and a bulwark of liberty for those oppressed by other branches of the administration, as it is in America and Great Britain, forms a part and parcel of the system. The judges, the nominees of the Governor-General, cannot be expected, under the circumstances, to be unbiased. They have the absolute authority to select the evidence they will admit. The defendant has no right to call witnesses on his own behalf. He may have a complete defense and not be allowed to present it. He can only make request that witnesses be called, and the judges grant the application or not as they see fit. The judges’ action is not subject to review by a higher court.”

Excerpt 2, taken from pp. 67-71
“A most serious phase in the matter of judicial administration in Korea is the fact that the system gives no assurance for justice to any one who may be caught in its toils. Nowhere in the whole process has there been any attempt to safeguard the innocent, but, on the other hand, there are six things that make it practically impossible to clear a person against whom a case has been made. They are as follows:

1. The right of the police to arrest without due process of law. No warrant is required for arrest. Neither the prisoner, his attorney, his family, nor his friends have any way of ascertaining the charge, if any, on which the arrest and detention is made. Bail is often not allowed, and not at all during the preliminary investigation. The right of habeas corpus is unknown.

2. Presumption of guilt. Instead of following the true legal maxim that ‘every man is considered innocent until proven guilt,’ the official and popular attitude is the very reverse of this, and the Japanese newspapers refer to the accused as criminals. The expression ‘proving the guilt’ of the accused is never heard. In case of acquittal, it is said that he ‘proved his innocence’ or was pardoned.

3. Right of counsel is denied. An accused person is not allowed to talk with a lawyer or with others about his defense until after the police investigation and the hearing before the procurator (prosecuting attorney) has been concluded. During this period of investigation the accused is in the hands of the police with all access to the outside world completely cut off, and the sole object of the police is to make a case that will insure conviction…”
4. Secret police investigation. Here is the very citadel of this iniquitous system. It is beyond dispute that the police use threats, deception and all forms of physical and mental torture to secure admissions of guilt or in their efforts to gain incriminating evidence against others. When such admission or evidence is obtained, it is reduced to writing, signed by the accused, and becomes the basis for inquiry both before the procurator and the trial judge. One would expect that the court would look upon such testimony with suspicion, and that unless it was confirmed or corroborated in open court, it would be thought and insufficient basis for conviction. On the contrary experience shows that it is almost impossible to get the judges to give credence to evidence tending to overthrow false admissions made under the pressure of the secret police investigation…

5. Collusion between police and procurator. The procurator acts as prosecuting attorney when the case is tried, but in advance of this the prisoners are brought before him for preliminary examination. After this examination he has the authority to reverse the police findings. However, the police report quoted above is authority for the statement that the police often serve as procurators. In such cases the hearing must be mere empty form. A Japanese lawyer in the course of his argument on a very important case said: ‘This case convinces me that the police and procurators are one and the same.’…

6. Biased judges. The process verbal from the police court and procurator is used as evidence on the trial before the judges. Judges are required to familiarize themselves with this record before the hearing begins. Thus they form their opinions before the defendant or his counsel can be heard…

To this must be added the fact that the accused has no right to set up and develop his defense in open court as has been referred to. We already have a fairly good outline of the Japanese legal system in Korea. If the whole system is thus deficient in theory, what could be expected in the way of practical results? Is it any wonder that the Koreans look upon the courts as machinery of oppression? The judicial power given to the police to execute judgments without trial on minor offenses is known as ‘Summary Judgment.’ The following table will indicate the proportion of the number of cases handled by the police in this fashion.

- In 1913 there were 21,483 convictions without a trial out of 36,953.
- In 1914 there were 32,333 convictions without a trial out of 48,763.
- In 1915 there were 41,236 convictions without a trial out of 59,436.
- In 1916 there were 56,013 convictions without a trial out of 81,139.”

Excerpt 3, taken from pp. 125 – 127:

“With this policy in view, the intellectual suppression of the Korean people has been as systematically carried out as political or economic subjugation. One of the first things the Terauchi administration did after the annexation was to collect all books of Korean history and biographies of illustrious Koreans from schools, libraries, and private homes and to burn them. Priceless treasures of historical records were thus destroyed by this needless vandalism of the Japanese. All Korean periodical literature – from local newspapers to scientific journals – has been completely stamped out. In true Japanese fashion the Government does not say that the Koreans shall not publish anything for themselves. But they lay down such rules and regulations as make it impossible for a Korean to start a publication of any kind. To start a publication,
whether a newspaper, magazine or book, one must obtain permission from the censor, which is next to impossible. If this difficulty is overcome, the publisher must deposit a certain sum of money with the police to meet the contingency of a fine. When an issue of a magazine is to be printed, two galley proofs must be sent to the censor and his stamp of approval obtained on each page before it can finally go to the press. If the censor has overlooked anything, the entire issue, after printing, is suppressed. Every attempt made by Koreans at publication fails because of this official control.”

**Source 2:**

Excerpted from p. 382:

“The reality was an education based on segregation between the Japanese and the Koreans, with the latter being denied access to quality educational opportunities and post-secondary education. In August 1911, following the example of the colonial education policy in Taiwan, an educational ordinance established separate school systems for Koreans and Japanese on the peninsula, with Korean common and higher common schools the equivalent respectively of primary and junior high schools in Japan. Unlike the six-year elementary schools of Japan, the ‘common’ (elementary) schools in Korea provided only four or five years of schooling. Also, whereas Japan’s secondary schools offered five years of training, Korea’s secondary schools, called ‘higher common schools’, offered only four years for boys and three years for girls.¹⁵

The purpose of colonial education in Korea is also reflected in the type of schools offered to Koreans: common schools focused on Japanese language training and the inculcation of duty as colonial subjects; vocational education in the secondary schools aimed at the creation of semi-skilled employees in the agricultural, commercial and industrial sectors; two-year technical colleges (senmon gakko) trained persons to acquire limited technical skills to occupy middle-management positions. University education was not accessible to Koreans initially, until Keijo Imperial University opened in Seoul in 1924. As the only four-year institute of higher education in the colony catering mostly to Japanese nationals, it also accommodated Koreans. However, the admission of Korean students was strongly restricted to between one-quarter and one-third of the total number of students. For example, the total enrolment of the Imperial University in 1934 in the 10 years since its establishment was 930, of which Koreans comprised only 32%.¹⁶

Segregated schools underscored the difference in status between the colonisers and the colonised. Educational policy considered advanced training unsuitable for colonial subjects and stressed primary Japanese language and vocational skills, thus supporting an economic policy that required a skilled workforce.¹⁷ At the same time, Japanese language education became compulsory in all the schools, while Korean language and literature classes were deliberately reduced or abolished. All schools in Korea also required students to take ethics courses that taught the ‘concept of loyalty to the Emperor and the state’ in order to turn Koreans into loyal subjects of the Japanese empire.

**Source 3:**

Excerpt 1, taken from pp. 82-83

“The idea that Korean assimilation would be easy gained a strong following at this time. Ukita Kazutami, editor of the magazine *Taiyō* (The Sun) who was a leading voice on Japanese imperialism, wrote that the differences in religion, race, customs, and habits prevented the Irish from assimilating with the English; the people of Posen (Poznan, in present-day Poland), Alsace, and Lorraine from assimilating with the Germans; and the Poles and Finns from assimilating with the Russians. The case of the Japanese and the Koreans, he asserted, was different, as the two peoples have been of the same race and of the same culture for centuries. He predicted that the Japanese would have relatively few problems in assimilating the Korean people, and that the relationship would evolve peacefully, like the relationship between England and Scotland, rather than become estranged, as with England and Ireland.³

Some observers noted resemblances between Japan’s tasks in Korea and those the Meiji government faced after it replaced the Tokugawa regime. Count Hayashi Tadasu, an active participant in the Meiji government’s diplomatic circles, put forth one such argument. Hayashi recalled the transition from Tokugawa to Meiji, a process he witnessed from its inception. Both situations, he began, required people to upgrade their dress, their living styles, and their eating habits. The inferior Korean people, he cautioned, also faced the challenge of assuming a ‘Japanese style’—they must adopt ‘Japanese spirit and thought.’ The historic similarities that the Korean and Japanese shared strengthened Japan’s chances of success with assimilation. Hayashi concluded, ‘If the Japanese failed to assimilate the Koreans there must be something particularly inferior with our political skills.'⁴

Others argued the merits of assimilation by drawing on the historical roots that the two peoples allegedly shared. Kita Sadakichi, employed by the Education Ministry, justified Korean assimilation by claiming Japan’s success in assimilating the Ainu, a people he argued to be now ‘almost indistinguishable’ from Yamato Japanese. This experience, he predicted, would be valuable to Japanese assimilation of Koreans. Kita’s most important work, however, traced the shared origins of the Japanese and Korean peoples. He explained that assimilation was appropriate because it represented a return to the historical, and natural, relationship that the two peoples once shared. Writing for the journal *Minzoku to rekishi* (Ethos and History) he argued the Yamato people’s origins to be a result of the ‘fusion’ (*yūgō*) of several lesser peoples.⁵ These peoples were absorbed by the Tenson people, the alleged descendents of Japan’s sun-goddess (Amaterasu Ōmikami). The Japanese and Korean peoples, Kita reported, evolved from these roots: their differences were a ‘small branch’ rather than a ‘large branch’ division; they were ethnic rather than racial. He estimated that no two peoples shared as close a relationship as the Koreans and the Japanese. In fact, he surmised, it would not be incorrect to consider them the same people.

³ Ukita Kazutami, “Kankoku heigō no kōka ikan” (What Are the Effects of Korean Annexation?), Taiyō (October 1, 1910). Marius B. Jansen offers biographical information on Ukita in his “Japanese Imperialism: Late Meiji Perspectives,” in *The Japanese Colonial Empire,*
ed. Myers and Peattie (61–79), 73. Nitobe Inazō offered a similar comparison in December 1919 by writing “to an English student of colonization it will be highly interesting to watch the development of Korea to a Wales or—to an Ireland.” Nitobe Inazō, “Japanese Colonization,” Nitobe Inazō zenshū, vol. 23, 120.

4 Hayashi’s comments were included in a longer article titled “Heigō go no Chōsen tōchi mondai” (Korean Administration Issues Following Annexation), Taiyō (October 1, 1910): 77–78.

5 Kita Sadakichi, “Kankoku no heigō to kokushi” (National History and Korean Annexation) (Tokyo: Sansëido, 1910); “Chōsen minzoku to wa nan zoya” (What Is the Korean Race), Minzoku to rekishi (June 1919): 1–13; and “Nissen ryōminzoku dōgenron” (The Same Origin Theory of the Korean and Japanese Races), Minzoku to rekishi (January 1921): 3–39. See also Duus, The Abacas and the Sword, 415–17.”

Excerpt 2, taken from pp. 90-91

“Japanese residents in Korea offered similar images of the Korean as primitive. Kubo Takeshi, who taught at Keijō medical school, contributed more than three hundred pages of medical research on Koreans to the Korean Medical Journal (Chōsen igakkai zasshi), the organ of the Korean Medical Association (Chōsen igakkai) founded in 1911. Kubo’s research on the Korean anatomy depicted the people as weak in the physiological characteristics of the civilized, yet strong in those of the uncivilized. While their development in “expressive movement” (hyōjō undō) muscles remained inferior, the muscles required for basic survival—those for hearing and smelling—remained superior, when compared to those of the Japanese.26 Many of his results boldly generalized the physiological construction of the Korean people based on autopsies performed on the limited number of cadavers that a local prison provided him. His attempt to characterize his Korean students accordingly—he accused them of stealing a skull bone based on his theory that the Korean head shape made them more prone to criminal activity—led to their boycott of his class.27

The Koreans’ backwardness was reflected in their daily life. Nakajima Motojirō, also writing for the Korean Medical Journal, attributed the habit of Korean women carrying heavy loads on their heads to their pelvic bone being smaller in diameter than that expected for women their size.28 Koreans also lacked the standards of hygiene and cleanliness acceptable to civilized people. Toriga Ramon, who authored a 1914 guidebook for potential Japanese migrants to Korea titled Chōsen e iku hito ni (To People Going to Korea), advised his readers to expect Korean inns, like Korean houses, to be ‘dirty.’29 Hara Sōichirō criticized Korean houses as “narrow and suffering” (semakurushii). He added: ‘Japanese houses are small when compared to European houses. But when I see Korean houses I have to sink to another level in poverty [binjyaku].’30

Both Toriga and Hara cited the Korean lack of spirit (tamashii). Toriga believed this to be a characteristic shared by other underdeveloped peoples: in Japan there is a Japanese spirit, in Russia a Russian spirit, and in America an American spirit. It would sound strange (hibiki ga warui) to consider an Egyptian, Indian, or Chinese spirit. He then questioned whether there was a Korean spirit.

26 Both studies appeared in Kubo Takeshi, “Chōsenjin no jinshu kaibōgakuteki kenkyū” (Research on the Korean Racial Anatomy), Chōsen igakkai zasshi 22 (July 1918): 52–86, 146–53. His research was also published in Chōsen oyobi Manshū, giving him a larger reader audience.
“Japanese discussion on assimilation, often incorrectly associated with Japan’s wartime imperialist policies, preceded Korean annexation. Japanese debated the policy’s merits and demerits in 1895 after Taiwan was absorbed into the empire; discussion in 1910 considered the pace and direction to which the colonial administration would push Korean assimilation. Japan’s ‘uniqueness’ as a colonial power was in its attempts to assimilate an ethnically similar people amid the unbridled land grabbing that characterized the period that Eric Hobsbawm famously dubbed the ‘Age of Empire’ (1875–1914). Yet, Japanese were inspired by British, Prussian, and French efforts in their peripheral territories, rather than these states’ efforts in their external possessions. A survey of Meiji-era discourse on assimilation policy reveals Japan’s views of ‘colonized’ to consist of a rather broad set of examples, with the English formation of the United Kingdom, the French annexation of Algeria, and the Prussian incorporation of Alsace and Lorraine serving as the most popular examples. The Japanese recognized assimilation to be the governing policy in territories such as Scotland and Wales, territories generally not treated in the contemporary literature as ‘colonies.’ They revised pre-annexation images that saw Koreans as foreign to argue that the similarities shared by the two peoples made assimilation more appropriate in Korea than in other European situations. Such discussions were required to address the more difficult question of whether assimilation was indeed the most appropriate policy for the Korean situation.

Excerpt 3, taken from pp. 16-17

## Unit Two

### Inquiry Design Model (IDM) Blueprint™

<table>
<thead>
<tr>
<th>Compelling Question</th>
<th>Can freedom exist under an oppressive regime?</th>
</tr>
</thead>
</table>

### Standards and Practices

- MWH.9-12.10: “Imperialism involved land acquisition, extraction of raw materials, spread of Western values and direct political control.”
- MWH.9-12.11: “The consequences of imperialism were viewed differently by the colonizers and the colonized.”
- MWH.9-12.1: “The use of primary and secondary sources of information includes an examination of the credibility of each source.”
- MWH.9-12.2: “Historians develop theses and use evidence to support or refute positions.”
- MWH.9-12.3: “Historians analyze cause, effect, sequence, and correlation in historical events, including multiple causation and long- and short-term causal relations.”
- D2.His.4.9-12. “Analyze complex and interacting factors that influenced the perspectives of people during different historical eras.”

### Staging the Question

The teacher will play a news clip on the centennial celebration of the March 1st movement and explain that clearly this day is important to Korea’s current national identity. Koreans view it as a pivotal moment and significant first step toward eventual liberation in 1945. The teacher will tell students that the March 1st movement was important, and did lead to freedoms. The teacher will explain to students that the new unit will focus on the extent of such freedoms, and whether freedom can truly exist for people governed by an oppressive regime like Imperial Japan.

### Supporting Question 1

What was the March 1st movement?

### Supporting Question 2

Why did Japan implement the cultural rule policy (bunka seiji)?

### Supporting Question 3

Did freedom and oppression coexist under cultural rule?

### Formative Performance Task

Students will participate in jigsaw groups to perform MOTU analysis on the featured sources. Depending on class size, there should be two groups (or any even number). Group 1’s sources (A and B) focus on the events of the March 1st movement and its purpose. Group 2’s sources (C and D) focus on the Japanese government’s initial reactions to the movement.

Students will individually read the sources and perform MOTU analysis in a manner of their choosing. Students will then participate in a writing for understanding exercise, during which they will use evidence from the sources to answer the lesson supporting question: Why did Japan implement the cultural rule policy (bunka seiji)?

Students will argue one of two assigned positions in small groups of 4. The activity consists of two rounds; round 1 is two students arguing their positions and debating while the other two group members take notes. In round 2, students will switch roles. Position A is that the cultural rule period represented an overall increase in freedoms for Koreans which outweighed any limitations. Position B
is that the cultural rule period was overall more oppressive than it was liberating.

### Summative Performance Task

**Argument**

Students will construct a short-written essay (400-700 words) answering the unit compelling question: Can freedom exist under an oppressive regime? Students should cite specific evidence from the sources in their essays.
<table>
<thead>
<tr>
<th>Extension</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students will write a letter to the editor as if they were an ethnic Korean living in Korea during the cultural rule period. Students will express their viewpoint on whether cultural rule has been more liberating or restricting for Koreans, as if from a contemporary Korean perspective. Within the letter, students should answer the compelling question and cite specific evidence from the unit featured sources. This letter should be 400-700 words in length.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Taking Informed Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>As a class, students will design, film, and edit a video (5-10 minutes in length) designed to inform the general public about the March 1st movement and to commemorate it. This video should consist of general information and facts, but also student commentary on the movement. Once completed, the video should be posted to YouTube by the teacher. The purpose is to give students an opportunity to responsibly use their digital platform as well as attempt to make the March 1st movement more widely known outside of South Korea, where it is a national holiday.</td>
</tr>
</tbody>
</table>

**Staging the Question**

The teacher will show the video clip linked below:

The teacher and the class will also read the following article, to contrast with how South Koreans view the movement. The teacher may elect to have students individually read the article, and then as a class discuss how it contrasts with the modern South Korean view of the day.

If desired, the teacher may also display the images in this USA Today article for more examples of how South Koreans today celebrate the March 1st Movement.

Finally, the teacher will say/pose the following to students (use this as a general outline or guide):

- The March 1st Movement is clearly an important piece to South Korea’s national identity today. The video made it clear that it is a source of pride, and South Koreans today view it as a pivotal moment and a significant first step toward eventual liberation in 1945. Modern North Koreans have a contrasting view, but clearly it was a significant event. The movement it started did lead to some changes that involved freedoms. We will be studying the extent of these freedoms, and asking ourselves: how free can a people be under an oppressive regime like Imperial Japan?
Unit 2, Lesson 1

Objectives

- SWBAT explain why the first decade of Japanese colonial rule in Korea resulted in the March 1st movement.
- SWBAT describe the events of the March 1st movement as well as the Japanese government’s initial reaction.

Standards:

- MWH.9-12.11: “The consequences of imperialism were viewed differently by the colonizers and the colonized.”
- MWH.9-12.1: “The use of primary and secondary sources of information includes an examination of the credibility of each source.”
- D2.His.4.9-12. “Analyze complex and interacting factors that influenced the perspectives of people during different historical eras.”
- D2.His.5.9-12. “Analyze how historical contexts shaped and continue to shape people’s perspectives.”

Lesson compelling question: What was the March 1st (Sam-il) Movement?

Hook (5-10 minutes):

- Provocative proposition/simulation (5-10 minutes): The teacher will pose the following question to students: How far would you be willing to go for freedom?

  Then, the teacher will pose the following scenario to students:

  Imagine you are a Korean teenager living in Seoul, renamed Keijo, in 1919. During all of your adolescence, the Governor-General of Korea has been Terauchi Masatake. You are frustrated with the Terauchi administration’s military rule, the hypocrisy of Japan, and the apathy of foreign powers. The Japanese government was insulted by the rejection of the racial equality clause at the League of Nations yet they treat your people as subhuman. The Americans have refused to help Korea. There seems to be no foreseeable end in sight to Japanese rule if things continue as they are. One day in February, you hear that a group of people are planning a large protest against Japanese rule and will be demanding Korean independence. This will take place in Seoul, not far from where you live. With the knowledge and understanding you gained from the previous unit in mind, what might motivate you to participate in such a moment? What might stop you? Would you attend the protest, if you were in this situation?

  The teacher will pause to give students a few moments to collect their thoughts, and then take student responses. Students should verbally share their answers with the class. After listening to several student responses, the teacher should follow up with the following statement, or one similar: “Clearly you all have a wide variety of ideas on what actions you would take. Some of you indicated you would attend the protest, despite the possible consequences of torture or jail. If your entire life was spent under harsh military rule, you might have had enough and wanted to take action. Well, some Koreans actually did exactly this on March 1, 1919.”

Body (30-35 minutes):

- Jigsaw groups (30-35 minutes): The teacher will split students into two groups of roughly equal size. Students in the same group should move their chairs or change desks to sit near one another. If the class is large, students should be split into any even number of groups. Group 1 (or half the total groups) will be responsible for performing MOTU
analysis for sources A and B. Group 2 (or the other half of the total groups) will be responsible for performing MOTU analysis for sources B and C. The teacher should inform students that the main theme of Group 1’s sources is the events of the March 1st movement in Korea, while the main theme of Group 2’s sources is Japan’s initial response to the protests.

- Students will receive ten minutes to read their sources and begin MOTU analysis individually. The teacher may project a timer onto the whiteboard so students are aware of how much time remains for individual work. Students should complete as much MOTU analysis for each source as they are able in the ten minutes.

- When the ten minutes are up, the teacher should verbally alert the students and refresh them on directions. Students will work with their group members to complete the rest of the MOTU analysis for each source. Students should fill in worksheets either physically or digitally. Students will receive ten to fifteen minutes (depending on student progress) to complete MOTU analysis for each assigned source with their group members. Students should be made aware that the MOTU sheets they complete with their group members will be turned in for a grade on accuracy and attention to detail. Students should be prepared to share out/peer teach. Group members should pick one spokesperson per source.

- Once the ten (or fifteen) minutes are up, the teacher should once again verbally alert students. Students will move on to sharing the findings of their group/peer teaching. Teachers should allot approximately ten minutes for this portion of the activity. Group 1 should start with the peer-teaching of MOTU analysis for source A, then move on to source B. Students taking on the role of peer-teacher should move to the front of the classroom and the teacher should project a blank MOTU analysis sheet on the whiteboard. The student should fill in main points of each section of MOTU analysis they share by writing on the whiteboard with a dry-erase marker, or using a stylus pen if the whiteboard is interactive.

Closure (5 minutes):

- Exit ticket (5 minutes): Students will fill out an exit ticket, answering the following: Briefly summarize the events and purpose of the March 1st movement, as well as Japan’s initial response. If possible, this can be typed and turned in on a digital learning management system such as Google Classroom. If not, students may write this on a sheet of paper and turn it into the teacher.

- Final wrap up/preview for tomorrow (remainder of class period/while students complete exit tickets): As students are finishing their exit tickets and final details of MOTU analysis sheets, the teacher will verbally summarize the day. Students examined the March 1st movement, which began as a protest in Seoul against the Japanese rule of Korea. Participants advocated for Korean national self-determination. Students also examined the short-term Japanese response to the March 1st movement, which included arresting protestors, beating protestors, and burning villages suspected of being involved in independence activity. The teacher will tell students that they have examined Japan’s short-term response, and the cruelty of it. However, tomorrow the class will be looking at Japan’s long-term response, which differed quite significantly from the short-term.

- Before exiting the room, students should turn in their exit slips, either on a digital platform or by handing their physical exit slips to the teacher. Also, students should turn in their MOTU analysis sheets. Again, these can be physically handed to the teacher if
paper copies are utilized. If not, students should turn them in on a digital learning management system, such as Google Classroom.

“Never has men’s merit toward the progress of democratic principles and against brutal force of militaristic aggression failed in the human history. It is so with the assurance of the Allied Victory against defeating forces of Germany and Japan. It is so with the belief of Koreans for the achievement of their long fight for regaining freedom from the Japanese.

After ten year bitter experience of two-fold pressure, political and economic, under the subjugation of Japan by her treacheries of protectorate and annexation in 1905 and 1910 respectively, 25 million Koreans were united as one men in expressing their aspiration for the national independence of Korea on March First 1919/

On that day, thirty three leaders chosen from three principal religions – Christian Churches, Chuntokio Sect and Buddhist Temples met together at Myung Wall Kwan a Korean restaurant in the heart of Seoul, the capital of Korea, and signed the Declaration of Independence. Mr. Son pyung Hee read this historical document before them, and they shouted “Mansei” three times for the independence of Korea. Mr. Son bravely announced to General Terauchi, then Governor – General of Korea through telephone about what they had done. Afterwar thirty three were arrested by the Japanese police and thrown into prison.

Simultaneously, at the Pagoda Park, a crowd [sic] of 100000 people gathered together under the leadership of young leaders. A musical concert was opened with singing of Korean anthem. When the music came to its end, a large Korean national flag was unfurled at the top of musical hall, and shower of leaflets on which was printed the Declaration of Independence fell on the crowd [sic]. The people received these leaflets with thundering cheers. Then the whole crowd [sic] marched up to the Union Square of Chongo where they devided [sic] into five groups in a most orderly manner.

First group proceeded toward the Tuksoo Palace to pay their last homage to the Ex-emperor whose remains were then lying in state. At the palace gate, patriotic speeches were delivered to mass. Another group went eastward to the Changtuk Palace where Emperor Yung Hee or the son of Ex-Emperor lived. They informed him what the movement ment [sic]. One group marched to the old Legation Quarters, where copies of Declaration of Independence were delivered to the American, French, Russian, and British Consul – Generals with compliments of Korean people. One group proceeded northward to the Kyungpok Palace where a new magnificent building was being built for the Japanese government. At the front of this Palace, the leaders also delivered patriotic speeches in the sense of protesting the Japanese rule and reminding the people of their old free days. Another group or the last group took their course southward toward the office of the Japanese Governor-General. When they reached the edge of the old Japanese concession, they were received by the Japanese troops who were waiting for them with brutal treatment.
Practically, all the processions were headed by school boys and girls who did nothing but singing their songs of independence, hoisting the Korean flags and shouting “Mansei”. Yet they were attacked by the Japanese police and soldiers and treated with most inhuman brutality. Hundreds of boys and girls were arrested and thrown into prison and underwent unspeakable tortures. In their savage manner of the Japanese authorities, young girls were undressed and lashed to the utmost sense of shamefulness. Many of leaders were killed instantly at the points of Japanese coward [sic] and bayonet. This was the first scene of March First at Seoul, and similar demonstrations and programs were held on the same day at different [sic] cities, towns and villages throughout Korea. Later Koreans in Manchuria and Siberia held such demonstrations in the sense of showing their sympathy to their kindreds in Korea. So March First means to Koreans the rebirth of national spirit, the rebuilding of national unity and the resourceful force of justice against brutality and inhumanity done to them by the Japanese war-lords.”

Source B:

“We herewith proclaim the independence of Korea and the liberty of the Korean people. We tell it to the world in witness of the equality of all nations and we pass it on to our posterity as their inherent right.

We make this proclamation, having back of us our 5000 years of history, and 20,000,000 of a united loyal people. We take this step to insure our children for all time to come, personal liberty in accord with the awakening consciousness of the new era. This is the clear leading of God, the moving principle of the present age, the whole human race’s just claim. It is something that cannot be stamped out, or stifled, or gagged, or suppressed by any means.

Victims of an older age, when brute force and the spirit of plunder ruled, we have come after these long thousands of years to experience the agony of ten years of foreign oppression, with every loss to the right to live, every restriction of freedom of thought, every damage done to the dignity of life, every opportunity lost for a share in the intelligent advance of the age in which we live.

Assuredly, if the defects of the past are to be rectified, if the agony of the present is to be unloosed, if the future oppression is to be avoided, if thought is to be set free, if right of action is to be given a place, if we are to attain any way of progress, if we are to deliver our children from the painful, shameful heritage, if we are to leave blessing and happiness intact for those who succeed us, the first of all necessary things is the clear-cut independence of our people. What cannot our twenty millions do, every man with sword in heart, in this day when human nature and conscience are making a stand for truth and right? What barrier can we not beak, what purpose can we not accomplish?

We have no desire to accuse Japan of breaking many solemn treaties since 1636, nor to single out specially the teachers in the schools or government officials who treat the heritage of our ancestors as a colony of their own, and our people and their civilization as a nation of savages, finding delight only in beating us down and bringing us under their heel.

We have no wish to find special fault with Japan’s lack of fairness or her contempt of our civilization and the principles on which her state rests; we, who have a greater cause to reprimand ourselves, need not spend precious time in finding fault with others; neither need we,
who require so urgently to build for the future, spend useless hours over what is past and gone. Our urgent need today is the settling up of this house of ours and not a discussion of who has broken it down, or what has caused its ruin. Our work is to clear the future of defects in accord with the earnest dictates of conscience. Let us not be filled with bitterness or resentment over past agonies or past occasions for anger.

Our part is to influence the Japanese Government, dominated as it is by the old idea of brute force which thinks to run counter to reason and universal law, so that it will change, act honestly and in accord with the principles of right and truth.

The result of annexation, brought about without any conference with the Korean people, is that the Japanese, indifferent to us, use every kind of partiality for their own, and by a false set of figures show a profit and loss account between us two peoples most untrue, digging a trench of everlasting resentment deeper and deeper the farther they go.

Ought not the way of enlightened courage to be to correct the evils of the past by ways that are sincere, and by true sympathy and friendly feeling make a new world in which the two peoples will be equally blessed?

To bind by force twenty millions of resentful Koreans will mean not only loss of peace forever for this part of the Far East, but will also increase the ever-growing suspicion of four hundred millions of Chinese – upon whom depends the anger or safety of the Far East – besides strengthening the hatred of Japan. From this all the rest of the East will suffer. Today Korean independence will mean not only daily life and happiness for us, but also it would mean Japan’s departure from an evil way and exaltation to the place of true protector of the East, so that China, too, even in her dreams, would put all fear of Japan aside. This thought comes form no minor resentment, but from a large hope for the future welfare and blessing of mankind.

A new era wakes before our eyes, the old world of force is gone, and the new world of righteousness and truth is here. Out of the experience and travail of the old world arises this light on life’s affairs. The insects stifled by the foe and snow of winter awake at this time with the breezes of spring and the soft light of the sun upon them.

It is the day of the restoration of all things on the full tide of which we set forth, without delay or fear. We desire a full measure of satisfaction in the way of liberty and the pursuit of happiness, and an opportunity to develop what is in us for the glory of our people.

We awake now from the old world with its darkened conditions in full determination and one heart and one mind, with right on our side, along with the forces of nature, to a new life. May all the ancestors to the thousands and ten thousand generations aid us from within and all the force of the world aid us from without, and let the day we take hold be the day of our attainment. In this hope we go forward.

THREE ITEMS OF AGREEMENT

1. THIS WORK OF HOURS IS IN BEHALF OF TRUTH, RELIGION AND LIFE, UNDERTAKEN AT THE REQUEST OF OUR PEOPLE, IN ORDER TO MAKE KNOWN THEIR DESIRE FOR LIBERTY. LET NO VIOLENCE BE DONE TO ANYONE.

2. LET THOSE WHO FOLLOW US, EVERY MAN, ALL THE TIME, EVERY HOUR, SHOW FORTH WITH GLADNESS THIS SAME MIND.

3. LET ALL THINGS BE DONE DECENTLY AND IN ORDER, SO THAT OUR BEHAVIOUR TO THE VERY END MAY BE HONORABLE AND UPRIGHT.

The 4252rd Year of the Kingdom of Korea, 3rd Month.
Representatives of the People.

Excerpt taken from pp. 233-238

“The following description of three devastated villages in the Suwon district, given by an American who visited them, furnishes a vivid picture of what has been going on in the remote parts of Korea ever since March 1, 1919.

Chai-Amm-Ni

On Thursday, April 17, news was brought to Seoul by a foreigner that a most terrible tragedy had occurred in a small village some fifty li (seventeen miles) south of Suwon. The story was that a number of Christians had been shut up in a church, then fired upon by the soldiers, and when all were either wounded or dead, the church was set on fire insuring their complete destruction. Such a story seemed almost too terrible to be true, and being of such a serious nature, I determined to verify it by a personal visit. On the following day I took the train to Suwon, and from there cycled to within a few miles of the village; knowing the strenuous objections that would be made to my visit, I made a detour of several miles over a mountain pass, to avoid the police and gendarme station which I knew was near the village…

The appearance of the village was one of absolute desolation; about eight houses remained; the rest (thirty-one) with the church had all been burned to the ground. All that remained were the stone jars of pickles and other edibles; these stood in perfect order among the ruins. The people were scattered about sitting on mats, or straw; some had already improvised little shelters on the adjoining hillside, where they sat in silence looking down in bewilderment at the remains of their happy homes. They seemed bereft of speech; they were probably trying to fathom why this terrible judgment should overtake them, and why they should suddenly become widows and their children orphans. There they sat, helpless and forlorn, entirely overcome by the calamity that had overtaken them.

Before the long the Government party left the village, and when the officers were well out of sight, the tongues of some of these poor frightened people loosened, and they revealed to me the story of the outrage, which follows:

On Thursday, April 15, early in the afternoon, some soldiers had entered the village and had given orders that all adult male Christians and members of the Chuntokyo (Heavenly Way Society) were to assemble in the church as a lecture was to be given. In all some twenty-nine men went to the church as ordered and sat down wondering what was to happen. They soon found out the nature of the plot as the soldiers immediately surrounded the church and fired into it through the paper windows. When most of the Koreans had been either killed or wounded, the Japanese soldiers cold-bloodedly set fire to the thatch and wooden building which readily blazed. Some tried to make their escape by rushing out, but were immediately bayonetted or shot. Six
bodies were found outside the church, having tried in vain to escape. Two women, whose husbands had been ordered to the church, being alarmed at the sound of firing, went to see what was happening to their husbands, and tried to get through the soldiers to the church. Both were brutally murdered. One was a young woman of nineteen – she was bayonetted to death; the other was a woman of over forty – she was shot. Both were Christians. The soldiers then set the village on fire and left...

Su-Chon

The hamlet of Su-chon is beautifully situated in a pretty valley some four or five miles from Chai-amm-ni, where the previously reported massacre occurred. But the hand of the despoiler had been there, and his finger prints, black and brutal, lay heavily upon the landscape. The narrow streets were lined with ash heaps; out of forty-two cottages eight alone remained. Little attempts had been made to clear away the debris by the survivors, for they had no sense of security of life and property, and they apparently feared that any attempt to gather their things together would only bring fresh disasters...

The following is the story of the destruction of the village:

On April 6, before daybreak, while all were sleeping, some soldiers had entered the village and had gone from house to house firing the thatched roofs, which quickly caught and destroyed the houses. The people rushed out and found the whole village blazing. Some tried to put out the fire, but were soon stopped by the soldiers who shot at them, stabbed them with their bayonets or beat them. They were compelled to stand by and watch their village burn to ashes. After completing this nefarious work, the soldiers left them to their fate. I was informed that only one man was killed, but that many were seriously injured. I inquired if the wind had spread the fire from house to house. The reply was that the village was on fire at several places at the same time, and that the soldiers carried matches and set fire to the thatch of many houses...

Wha-Su-Ri

Wha-su-ri must have been a picturesque village before the barbarous troops of His Majesty’s Government transformed it into an ash-heap. The village is surrounded by wooded hills, which slope towards the valley of fertile paddy fields. In the center of the village there had been a lovely ‘country residence,’ which had a tiled roof and gateway. Now it is nothing but a huge heap of broken tile, dirt and brick…Out of some forty odd houses eighteen remained. No wind had spread the fire; something more sure, more definite, more cruel – the hands of Japanese troops whose hearts must have been filled with murder...

The following is the story of the burning of the village:

On April 11, some time before daybreak, the villages were suddenly aroused out of their sleep by the sound of firing and the smell of burning. Running into the open they found soldiers and police firing the houses and shooting and beating the people. Leaving everything, they fled for their lives, old and young, the mothers with their babies at their breasts, and the fathers with the younger children – all of them fled to the hills. But before they could make good their escape, many were murdered, shot by the soldiers, wounded and beaten, while a number were arrested and taken to jail.”

Students should analyze the images on pp. 15-19 and pp. 24-37.
Unit 2, Lesson 2

Objectives:
- SWBAT explain why Japan implemented the cultural rule policy in Korea.
- SWBAT evaluate the appropriateness of cultural rule as a policy in Japanese occupied Korea.
- SWBAT construct an argument supported by evidence found in both primary and secondary sources.

Standards:
- MWH.9-12.10: “Imperialism involved land acquisition, extraction of raw materials, spread of Western values and direct political control.”
- MWH.9-12.11: “The consequences of imperialism were viewed differently by the colonizers and the colonized.”
- MWH.9-12.3: “Historians analyze cause, effect, sequence, and correlation in historical events, including multiple causation and long- and short-term causal relations.”

Lesson compelling question: Why did Japan implement the cultural rule policy?

Hook (5 minutes):
- Review for preview (5 minutes): The teacher will ask the students what the main focus of the previous day was, using the following prompts:
  - In just a few sentences, can anyone summarize what we learned yesterday? (Looking for answers similar to/containing: We learned about the March 1st movement, when thousands of Koreans protested Japanese rule in Seoul and demanded independence. The movement spread throughout the country and was a result primarily of the harsh militaristic rule of the first decade of Japanese rule. Japan initially responded with brutality.)
  - Why might the March 1st movement be a major problem for the Japanese government? (Looking for answers similar to/containing: The March 1st movement showed very clearly to Japan that their current approach to ruling Korea was not working. Koreans were clearly very unhappy. While Japan could have continued in their previous manner, they would have run the risk of increasing Korean frustration and resistance.)
  - The teacher should share with students that the bottom line for the Japanese government after the March 1st movement is that Korean policy clearly needs to change. Continuing military rule was simply not an option; they very much needed to change course. So today, the class will look at how that happened.

Body (35-40 minutes):
- Instructions: The teacher should begin by previewing the day verbally and giving students instructions. The teacher will tell students that they will be reading the sources individually and performing MOTU analysis individually. Students will receive 15 minutes to read individually and perform MOTU analysis as they read. Students will have a choice of how to perform MOTU analysis – they can either fill in a MOTU worksheet from the National Archives and Records Administration or annotate the document with notes on MOTU components. This can be done either physically or digitally using a highlighting and annotating Chrome extension such as Weava. After receiving time to read and perform MOTU analysis, students will receive 20-25 minutes to write a brief essay.
Independent reading/MOTU source analysis (15 minutes): Students will receive 15 minutes to read the sources and perform MOTU analysis in a manner of their choosing. The teacher should project a timer onto the whiteboard/SmartBoard to assist students with pacing. The teacher should tell students that once they finish reading, they will be writing an extended response/brief essay answering the lesson compelling question. The lesson compelling question is: Why did Japan implement the cultural rule policy?

Writing for understanding (20-25 minutes): Students will write a brief essay (~300-500 words) in response to the lesson compelling question. Students should cite specific evidence from the sources and aim for quality over quantity when developing supporting points to their arguments.

Closure (5 minutes):

- Students should finish writing their final thoughts and submit them, if completed digitally. If written physically, the teacher should collect them.
- The teacher should verbally summarize the day. Students read sources independently on various reasons and motivations Imperial Japan had for implementing the cultural rule policy in Korea. The teacher should reassure students that despite not verbally discussing sources, they will remain important throughout the remainder of the unit. The teacher should tell students that the following day’s lesson will focus on freedoms and limitations Koreans experienced under cultural rule. Students will want to keep in mind Japanese motivations as they read about and discuss the next day’s topic.
- The teacher should assign homework for the following day: Students should read the sources for lesson 3, and perform MOTU analysis as they see fit (annotating, filling out a worksheet, etc.). When reading, students should keep in mind lesson three’s compelling question: Did freedom and oppression coexist under cultural rule?

Excerpt 1, taken from pp. 112-113

“News of the government-general’s harsh reaction to the Korean independence movement quickly spread throughout the empire and beyond. Criticism from abroad took a number of forms. Some critics specifically targeted Japan’s colonial policy; others equated the harsh reaction by the Japanese to their uncivilized nature as a people. Criticism by Japanese also focused on their country’s assimilation policy. While some faulted contradictions in the approach—assimilation rhetoric and segregation practice—others cast blame on the Korean people. Their “cacophony” (sōjō) demonstrations proved them to be unworthy of assimilation as Japanese. Dissention appeared even among Koreans who used the Japanese media to criticize Koreans who had encouraged an activity that held so little promise of success.³

Criticism by acting British consul in Korea, General William M. Royds, faulted Japanese assimilation rhetoric rather than Japanese effort:

The Japanese policy at present openly aims at depriving the Coreans of even their own language and customs, and their total assimilation by Japan, and their deliberate attempt
to enforce this policy by every available means is the cause of the universal hatred in which the Japanese are held throughout the land.

Royds’s advice reflected disdain for the brutal administration to which Japan subjected Koreans during its initial decade of colonial rule: ‘It seems evident that a few reasonable concessions and a more sympathetic attitude would do more to restore quiet and contentment than an attempt to stamp out the dissatisfaction by force.’

Some in the United States Congress believed that Japanese behavior demonstrated this people to be racially inferior, particularly after receiving news that Japanese had burned Koreans in Christian churches. George W. Norris, a senator from Nebraska, used Japan’s barbaric behavior to justify attitudes against the United States joining the League of Nations. After reviewing Japan’s history of deception in Korea that led to annexation, he presented an incriminating account of Japan’s handling of the March First Movement. Norris characterized the plight of Korea—a country ‘on the eve of a great upheaval for Christianity and civilization when the Japanese took possession’—as a case of pagan Japanese persecution of Korean Christians. This alone, he claimed, made Japan’s crimes much more heinous than the other atrocities conducted by other colonial powers at this time. The Korean case, claimed Norris, illustrated why the League of Nations treaty needed amendment before the United States could join. To accept the treaty as proposed would ‘put the clock of civilization back a thousand years,’ as was now happening in Korea.

3 Yun Ch’iho notes his interview with the Osaka Mainichi shinbun on why he refused to participate in the March First Movement in his Yun Ch’iho ilgi, vol. 7 (March 2, 1919).
4 Quoted in Ku, Korea Under Colonialism, 138. See also Nagata, Nihon no Chōsen kankei to kokusai kankei, chapter 7, for a review of the U.S. response to Japan’s handling of the Korean independence movement.”

Excerpt 2, taken from pp. 123-125

“As Japanese adjusted their images of the Korean people, the government-general gradually introduced policy revisions. Discussion on reforms began soon after the March First Movement was quelled. Prime Minister Hara Takashi, one of Japan’s foremost advocates of assimilation, took the lead in pushing these reforms. His statements blurred divisions between Japan’s homeland and colonial subjects, whom he felt should be accorded equal positions in Japan’s extended community.

Hara contributed one of his earliest public statements on assimilation to Itō Hirobumi’s ‘secret papers’ (discussed in chapter 2). The deputy foreign minister made generous use of the European example in his arguments. Taiwan should be incorporated not as a ‘colony’ in the British model, but as an extension of the homeland. Japanese administration policy should assimilate the Taiwanese as Japanese, as seen in German-controlled Alsace and Lorraine and in French Algeria. The cultural heritage shared by the Japanese and the Taiwanese rendered this policy appropriate. To implement this policy, Hara advised as follows: Japan’s legal system being extended to the island, its governor general receiving orders from a Tokyo-based Taiwan administrative minister (Taiwan jimu daijin), and Japanese institutions holding jurisdiction over
their respective counterparts in the colony. He thus advised that Taiwan’s administration be organized as extensions of the capital, just like Japan’s other prefectures.  

Hara placed blame for the March First disturbances squarely on military rule and, specifically, the barriers it erected to block integration of Korean and Japanese. In a 1919 opinion paper (ikensho), the prime minister defined the government-general’s role as promoting integration not only in schools and workplaces, but also in the two people’s living arrangements…

Hara specifically targeted the education system that segregated Koreans from Japanese. One cannot expect a people to change, he stressed, while administering them as fools. Differences that the government-general had created in the two systems nurtured the discriminative attitude to which Japanese stubbornly clung. Hara further recommended that Koreans be taught their history to allow them to understand the progress made by the Japanese, and to be able to compare the past decade to the centuries of stagnation that their ancestors endured under Korean rule.

The prime minister’s most difficult decision rested on his choice of Hasegawa’s replacement. The anti-Japanese demonstrations eliminated any chance of a civilian assuming this post—his first choice had been the present vice governor general and adopted son of Yamagata Aritomo, Yosaburō—as his selection required the army faction (Yamagata, Terauchi, Hasegawa, and Tanaka)’s backing. The new governor general also had to be distanced from this group to signal to Koreans and the critical international community Japan’s willingness to push reform. His ultimate selection, Saitō Makoto, was different in a number of ways from other governor generals. First, Saitō was from the navy rather than the army. Also, Saitō was retired at the time of his appointment and thus technically civilian. However, after the appointment Hara had the admiral’s name returned to the active roster to conform to the existing Organic Regulation of the Korean Government-General.

Saitō also spoke excellent English, a talent that proved indispensable. It opened a direct line of communication with Korea’s foreign residents, and thus an indirect line with their governments, to sell his reforms.

33 Hara Takashi, “Taiwan mondai futa an” (Two Proposals for the Taiwan Problem), in Hisho ruisan, ed. Itō et al., 32–34.

38 Hara changed this legislation to allow for a civilian governor general a week later. However, army generals dominated this post until Japan’s retreat from the peninsula in 1945. See Dong, “Japanese Colonial Policy in Korea,” 248–49.”

Excerpt 3, taken from pp. 126-128
“From his first days in office, Saitō maintained that he intended to honor the initial intention of annexation as articulated in the Rescript issued by the Meiji Emperor in 1910. In his 1921 New Year’s address Saitō vowed that his administration would continue with the fundamental plan of Korean administration that remains unchanged, namely to honor the imperial words of ‘impartial humaneness (isshi dōjin), to integrate Korea into the general world situation, and to imperialize our 20 million brethren (dōhō) while constructing a paradise of peace over the 3,000 ri of rivers and mountains.\(^{45}\)

He anchored his reforms with what came to be known as ‘cultural policy’ (bunka seiji), a policy with five fundamental goals: the maintenance of public peace, the spread of education, the promotion of local rule, the development of industry and transportation, and the improvement of health. These goals sought to enhance the development of the peninsula and the prosperity of its people, both prerequisites to the Korean people assuming a status of equality with their Japanese counterparts in preparation for assimilation.\(^{46}\)

Publication legislation reforms constituted just one of the many reforms that the government-general would introduce in the years that followed the March First demonstrations. A 1920 report summarized the twenty-four reforms that it had enacted to date, and eight new reforms planned for implementation in the near future.\(^{50}\) Many suggested the influence of Prime Minister Hara Takashi’s opinion paper, but few reached the level of integration that Hara had recommended at this time. The reforms first eliminated important physical symbols of Japanese power that distinguished Japanese from Korean. They banned uniforms for most Japanese government-general officials. Although it was not specifically stated, these officials would presumably be disarmed of their swords, as well. The hated kenpeitai, the gendarmes who were most responsible for Japan’s botched handling of the independence movement, were exiled to northern border patrol. A second round of reforms encouraged Japanese with pay incentives to learn Korean. These developments relaxed two barriers—power symbols and language—to encourage greater interaction between Koreans and Japanese. By revising the nationality laws (minseikihō) the administration also hoped to make it easier for Koreans and Japanese to intermarry. Other measures sought to erase existing differences in the way colonized and colonizers were treated. Bureaucrats would now be paid under the same salary scale, regardless of ethnic origin. In its revisions of the police department, the administration announced that Japanese had eliminated the title of “Chōsenjin junsaho” (Korean patrol assistant) to erase Korean-Japanese distinction. Finally, Japanese ended the whipping of Korean prisoners, a punishment originally believed by the Japanese to be fitting to their cultural level (mindo); the ban would equalize Korean-Japanese punishment.

The reforms also targeted Korean education, both classroom and social. We do not see efforts made to integrate Koreans and Japanese. Rather, the reforms increased opportunity while maintaining (and even fortifying) segregation. The high enthusiasm that Koreans showed for this education encouraged the government-general to increase the number of elementary schools (from 556 to 870) as well to strengthen male and female higher education. It also vowed to add classes in the sciences and to upgrade English from an elective to a required class. Most important, the administration promised to examine the possibility of extending Korean education to six years, the number of years then required of Japanese children. The reforms also emphasized social education. The most visible change was its reforming publication legislation
to permit three new vernacular newspapers: the Tonga’ ilbo, the Chosŏn ilbo, and the Chungang ilbo. This revision ignited an active print culture that oversaw publication of numerous journals and magazines of various genres that lasted up into the outbreak of war in the late 1930s. The Japanese headed a second element of social education as ‘Facilities to promote Japanese-Korean harmony’ (Naisen yūwa no tame no shisetsu), and listed four areas to be targeted to ‘gain [Japanese] acceptance (ryōkai) of Koreans, and Korean understanding of Japan’: bringing Korean teachers and public officials to Japan, introducing Korea to Japanese people through movies, organizing public seminars for Koreans on Japan, and promoting ways in which Japanese could observe Korea and Koreans.

45 Saitō Makoto, “Chōsen tōchi ni tsuite” (Concerning Korean Administration), in Saitō Makoto monjo, vol. 2 (January 1921), 424
46 Saitō Makoto, “Chōsen no tōchi” (Korean Administration), Chōsen (January 1921): 3–7. The term culture was a buzzword frequently heard in the homeland, as well. Sugimori Kōjirō contrasted it with militarism in his definition of the purpose of culturalism—freeing the people from the sufferings of narrow-minded patriotism. Sugimori Kōjirō, “Gendai keimō undō no ichi hyōgō” (The Slogan of the Contemporary Enlightenment Movement), which appeared in “Bunka seisaku no kenkyū” (The Study of Culture Lifestyle), Fujin kōron (June 1922): 33. Komagame Takeshi contends that bunka (culture) replaced bunmei (civilization) in textbooks with little apparent change in meaning in his meaning in his Shokuminchi keikoku Nihon no bunka tōchi, 203.

50 For the text of the reforms see “Chōsen shisei no kaizen” (Reforms in Korean Administration), Saitō Makoto monjo, vol. 1, 73–141.”

Source B:
Excerpt taken from pp. 385-387

“Rattled by the scale and intensity of the March First Uprising, Governors-General Admiral Saito Makoto (1919–1927, 1929–1931), General Yamanashi Hanzo (1927–1929) and General Ugaki Kazushige (1927, 1931–1936) parcelled out limited freedoms to the Koreans in education, print and political organisation, hoping to undercut the militancy of a growing nationalist movement. The administrative policies known as Cultural Rule came into effect after the nationwide uprising. The conciliatory policy implemented in the name of Cultural Rule lasted until the late 1930s. The Japanese were especially disturbed by the fact that many Koreans educated by the Japanese under their system had masterminded the uprising. Subtle policies were implemented that aimed to deliberately dismantle the independence movement and thereby undermine any effort by the Koreans to connect to their heritage. While physically this was possible in the short term, the long-term goal of the Japanese colonial authorities was to utilise Colonial education in order to water down any intellectual movement that might critically evaluate the prevailing system of governance. In the end education in colonial Korea was rendered subservient to political expedience and symbolic displays of power.

Amid the social and political climate born of Cultural Rule, the colonial authorities acknowledged the continued demands for better education by the Koreans.28 Schools existed
prior to colonisation, but they did not always have the integrative function characteristic of schools in the West. Missionaries introduced the kind of schooling that was a crucible of common culture in nation-states in the West prior to Japanese colonisation, and such Western-style schooling would have fomented a popular demand eclipsing virtually all other traditional forms of education on the Korean peninsula. The authorities saw it as an opportunity to use expansion of modern schooling – symbolic of ushering in modernity on the Korean peninsula – as justification for the enterprise of colonial subjugation and their presence in Korea. Schools thus were an efficient means to convince the Koreans that it would be self-defeating to reject Japanese colonial rule as long as Imperial Japan stood for modernity itself.  

In 1922 nominal equality was given by the educational ordinance, placing Korean ordinary and higher common schools on the same level as Japanese elementary and secondary schools. Thus six years of education in the common schools, five years in boys’ higher common schools and four years in girls’ higher common schools were provided. Also, segregated schools for Japanese and Koreans were restructured into a single school system from the secondary school level. At the same time, educational facilities in Korea were expanded. Under the slogan ‘san-men ikko’ (one school for every three districts), the Government-General inaugurated a programme of expanding the public common school system, particularly in rural areas.

As noted earlier, prior to the March First Uprising in 1919, public schools had difficulty in recruiting students. The situation quickly changed by the early 1920s, judging from a multitude of sources. The most evident is the increased usage of the terms kyoyukyeol (education fever), hakkyoyeol (school fever), hyanghakyeol (fervour to study) in public documents and newspapers. These terms mainly reflect the sudden increase in enrolment. Noteworthy is the fact that in the aftermath of the March First Uprising, the enrolment rate in the common schools climbed sharply, from 17.7% in urban areas and 2.6% in rural areas in 1915 to 33.8% and 16.2% respectively by 1926. By 1933 there were 680,000 students enrolled in 2271 elementary schools, while 35,000 students attended 579 rudimentary village schools in rural areas. Vocational education expanded as well from 21 schools with 1872 students in 1919 to 52 schools with 9220 students in 1935. Also, in response to the indigenous movement to set up a national university, the Japanese established Keijo Imperial University as a state-run university in 1924.

The reason for the turnaround can be attributed to a couple of factors. First, in the aftermath of the failed March First Uprising, the Koreans felt the need to be enlightened to face up to the Japanese rulers. Koreans engaged in the independence movement at various levels saw that nationalistic fervour alone was not sufficient in the fight for independence. Koreans had to develop forms of social consciousness appropriate to their historical situation in which their culture not only served to define them as distinct from and opposed to the Japanese but also provided a potential basis for uniting in the struggle for independence. Schools, even under Japanese management, were seen as necessary for educating the general public to eventually become critical of the given situation and assess their position. Second, the schools became the conduit through which Koreans climbed up the social ladder regardless of their class origin. For instance, modern school education became a necessary means to becoming a civil servant, which was regarded as a prestigious occupation. The modern school in effect dismantled the established class system, opening the possibility of children of lower social strata gaining access to occupations formerly denied to them through education. In short, the first factor diminished the mental reluctance against public schools, while the second factor provided the practical motivation. The most fundamental alteration underlying these specific changes is the shift of the
central focus in social consciousness as a whole, from tenaciously clinging to Korean traditional and cultural values based on the old order, to one that was both more pragmatic and realistic.

Note: The following excerpt is Richard Devine’s translation of the Governor-General Hasegawa Yoshimichi’s Personal Recommendations, written in 1919, found on pp. 532-540.

Personal Recommendations

“It is a source of great shame that the recent disturbances broke out while I occupied the important post of governor general of Korea. The immediate cause of these riots lay in the fact that dissident Koreans living abroad, influenced by the upheavals occurring in the world at large and resurgent movements for liberation, fomented subversive activities overseas. Son Pyong-hui, the former head of Ch’ondogyo, took advantage of this situation to achieve his long-held ambitions, and rallied followers of Ch’ondogyo, Christians, and students with a call for ethnic self-determination. From various quarters people joined the movement, dazzled by beautiful-sounding words such as ‘independence’ and carried along by the Korean tendency to follow the crowd. Yet while the riots were due in substantial measure to such factors, the main reason is to be found in the pent-up anger of the Koreans regarding the overly demanding and intrusive nature of the new [colonial] government and the social discrimination they have experienced. This is indeed deplorable. During the past eight years of [Japanese] rule in Korea, we have pursued a policy of assimilation and have not willfully adopted policies that are unfair to the Koreans. Nevertheless, should these troubles result in the general populace harboring the conviction that the new government cannot be trusted, it will be a source of grave concern for governance in the future. It is essential to investigate the situation and carry out reforms in administration so that the anxieties of the people are relieved and they are led in a positive direction. I here present my views for your perusal.
1. What we should strive to accomplish
The policy of assimilation has been fixed since the time of annexation, and various measures have been based on it. With the rise of the independence movement and student participation therein, people have come to criticize this policy and call for change. But as the policy has been in effect for only ten years, it would be overly hasty to judge it a success or failure at this point.

The relationship between Korea and Japan (naichi) differs from that between the powers and their colonies. This situation must be considered from a political standpoint. Korea is Japan's base for development on the continent and the perimeter of defense for the home islands. A firm solidarity founded on harmonious unity is a prerequisite for the survival of the Empire. Even if assimilation entails many difficulties, diligent effort will obtain the goal. Such effort will redound to the honor of the Japanese people. Do not the accomplishments of the past nine years offer cause for hope?

Obsequiousness and suspicious ingratitude are part of the traditional Korean character. If we allow them a measure of self-government without checking this tendency, it is sure to be a source of trouble for the Empire in the future. Nevertheless, they have several thousand years of history and ethnic tradition. Even though we, Japanese and Koreans, may be of the same race and culture, it is impossible to expect assimilation to be accomplished in one day even if we rely on the authority of the new laws [promulgated by the Government General]. Thus, while basing our administrative policy on the principle of assimilation, we should adopt a gradualist approach rather than try to eradicate forcibly [the barriers to assimilation]. Although this may seem abundantly clear, those people charged with the actual work of implementing assimilation are apt to seek hasty results. Reflection on the past record deepens my conviction about this matter. There are also many lessons to be learned from the recent uprising.

I believe that as an immediate step we should (1) strengthen the economic ties linking Koreans and Japanese, making them indissoluble, and (2) promote schools and social education, further opportunities for Koreans and Japanese to study together and the spread of the Japanese language, encourage immigration from the home islands, and open the door to mixed marriages. This will lead naturally to a unification of ways of thinking. Although we have made considerable effort toward these objectives up to now, we have not given sufficient attention to the problem of social education. Similarly the matter of immigration has been left up to the Oriental Development Company, and the administration has not undertaken any specific action. But we should not leave immigration just to the Oriental Development Company. We should facilitate investment in Korea by removing all barriers that may presently hinder it, encourage the growth of business enterprises by expanding subsidies to them, and thereby have Korea lead the way to the development of capitalist enterprise in the home islands. If, together with this we encourage immigration of people of the educated class, it is sure to have a positive effect as regards the policy of assimilation. Mixed marriages involve many problems, it is true, but as a legal code common to both Korea and the home islands has been promulgated, revision of the Family Registration Law should be undertaken so as to ease the conditions for such marriages. (This matter is under discussion.)

The Oriental Development Company (Toyo Takushoku Kaisha i was a semi-governmental agency established in 1908 with the purpose of acquiring and developing agricultural land in Korea. As part of that policy it also fostered the immigration of Japanese settlers.”
Unit 2, Lesson 3

Objectives:
- SWBAT explain how the post-March 1st cultural rule (*bunka seiji*) in Korea resulted in both new freedoms and continued oppression for Koreans.
- SWBAT evaluate, synthesize, and reconcile potentially conflicting views and experiences. This includes both historians’ interpretations and the views of people who experienced the events studied.
- SWBAT construct an argument supported by evidence found in both primary and secondary sources.

Standards:
- MWH.9-12.11: “The consequences of imperialism were viewed differently by the colonizers and the colonized.”
- MWH.9-12.1: “The use of primary and secondary sources of information includes an examination of the credibility of each source.”
- MWH.9-12.2: “Historians develop theses and use evidence to support or refute positions.”
- D2.His.4.9-12. “Analyze complex and interacting factors that influenced the perspectives of people during different historical eras.”

Lesson compelling question: Did freedom and oppression coexist under cultural rule?

Hook (5 minutes):
- Analogy/comparison to personal experiences (5 minutes): The teacher will ask students to recall a moment or period in their life in which they felt both restricted and free. Students may think of a time when freedom and oppression coexisted in the same moment or time period. Potential student responses include: ability to do more as an older teenager (later curfew, fewer rules, etc.) but more responsibility (pay own gas/bills), ability to spend more personal time as they wish during quarantine but restriction on overall movement, and freedom in applying to/going to college but now bound with responsibility of paying loans and obtaining a degree. Student responses could involve a broad range of experiences and topics. For all responses, though, the teacher should emphasize that in those moments students were not entirely oppressed nor entirely free – the two states coexisted. The same, in many ways, can be said for Korea under cultural rule. Koreans experienced many freedoms but also continued restriction and oppression.

Body (40 minutes):
- The teacher should assign roles for the discussion. Students will need to argue one of two positions. Position A is that the cultural rule period represented an overall increase in freedoms for Koreans which outweighed any limitations. Position B is that the cultural rule period was overall more oppressive than it was liberating. The teacher will assign one half of the room to argue position A in small groups, and the other half to argue position B. The teacher will then divide students into small groups of four students each; each group should contain two students arguing position A and two position B.
- Individual review (5 minutes): Students will rearrange their seating, if necessary, to be near their group members. Before discussing, students will receive 5 minutes to silently review the sources and the MOTU analyses they performed for homework.
- Response groups (20 minutes): There will be two ten-minute rounds to the response groups. The teacher should project a timer onto the board so students are aware of pacing. During the first round, two students (out of the group of four) assigned opposing
positions will debate their positions and arguments. While two students are actively
discussing, the other two students should take careful notes on the discussion and
arguments. These notes should contain information about what was said, but also
students’ perceptions about the strength of arguments presented. When the first ten
minutes are over, the teacher should verbally announce this to the class. The teacher
should tell the class to switch positions. Then, the two students who were observing will
actively argue their assigned positions while the two students who already argued will
take notes.

- **Debrief (5 minutes):** In their small groups, students will discuss notes they took.
Students should focus on arguments made as well as the strength of them. If a student
believes that an argument was weak or strong, he or she should state specific reasons
why. Based on this discussion, the group will come up with a position in response to the
lesson compelling question. Students are no longer bound to their assigned positions.
Groups’ positions can be either A or B, discussed above, or one in-between. Groups
should be prepared to support their positions with evidence from the sources.

- **Share out (10 minutes):** One spokesperson from each group will verbally share their
  group’s consensus with the class. The spokesperson should share the group’s position as
  well as evidence the group discussed in support of that position. As students share, the
teacher should write responses on the whiteboard. Alternatively, the teacher might project
a document on the board and type students’ responses in as they speak. Once all groups
have shared their responses, the teacher should move on to the closure but leave the
responses either written or projected onto the whiteboard.

**Closure (5 minutes):**

- **Large group response (5 minutes):** The teacher should pose the following to students:
  “Bottom line, what do you all think? Did Koreans find more freedoms than oppression
during the cultural rule period? Does any continued oppression cancel and outweigh the
freedoms?” Students will voluntarily share their answers. If students do not do so, the
teacher should ask those who share to explain why they believe what they do. During the
discussion, the teacher should emphasize the complexity of the time period and that there
are no right answers. Students are free to take whatever position they choose on any
issue, as long as it is supported by evidence.

Excerpt taken from pp. 183-184

“Partly in response to these events in China, Japanese political leaders undertook
relatively conciliatory efforts to protect economic interest in China for much of the 1920s. In
similar fashion, Prime Minister Hara Kei decided that simple repression was the wrong way to
sustain colonial rule in Korea. The overall goal of Hara’s policies was to assimilate Koreans into
Japan not as colonial subjects, but as a relatively equal people who were to be integrated with
Japanese through shared neighborhoods, schools, and even intermarriage. In the wake of the
March 1 protests, he appointed a new governor general, Admiral Saito Makoto, with a mission to
restore ‘harmony between Japan and Korea.’ Saito’s new departures came to be called ‘cultural
rule.’ The essence of his program was a strategy of divide and rule. Colonial administrators were
charged to support cooperative Korean leaders and organizations, while isolating and suppressing any sign of anti-Japanese activity.

‘Cultural rule’ has often been dismissed as cosmetic reform that masked unrelenting authoritarian control. After Saito’s arrival, the Japanese quickly and dramatically quadrupled the number of police stations and substations in just one year. The police developed a huge network of spies and informers throughout Korea. In the name of economic development, colonial administrators funded improved irrigation, and production did expand, but most of the increase was exported to Japan. Per capita rice consumption in Korea actually declined.

But Governor General Saito’s reforms were slightly more than window dressing. Saito gradually expanded the number of public schools for Koreans. He recruited more Koreans into the colonial administration. He narrowed the inequality between their wages and those of the Japanese. Koreans were permitted to publish books, magazines, and newspapers more extensively than before. Colonial administrators allowed a much wider range of Korean organizations to carry on activities. Korean people founded thousands of new education and religious groups, youth groups, and organizations of farmers and laborers. A small number of Korean capitalists were given new economic opportunities.

Even if policies of cultural rule and assimilation had been widely and consistently implemented, it is hard to imagine they would have brought Koreans and Japanese into a happy state of unity. Precisely because they understood this, it would seem, the colonial rules continued policies of intensive censorship and surveillance. Those who challenged Japanese rule even slightly were jailed and tortured. Nonetheless, nationalist political activities continued, either openly in subtle disguise or in secret. If anything, the space opened by cultural rule offered the subject population a chance to improvise a Korean-inflected modernity. As in Japan (although in a more tightly constrained fashion), a newly diverse and energetic modern cultural life – cinema, radio, and literature – flourished throughout the 1920s and into the early 1930s.”

Excerpt taken from pp. 206-208

“One peculiar feature of Japanese rule in Korea, which is found in no other country in the world, is its spy system. It is incredible from a Westerner’s point of view. It is true, none the less. In Korea everyone must be registered and is given a number, which is known to the police. Every time he leaves his village or town he must register at the police station and state fully the business he intends to transact and his destination. The policeman telephones to this place, and if the registrant’s actions are in any way at variance with his report, he is liable to arrest and mistreatment. A strict classification is kept on the basis of a man’s education, influence, position etc. As soon as a man begins to show ability or qualities of leadership, he is put in class ‘a,’ detectives are set on his trail, and from thenceforth he becomes a marked man hounded wherever he goes…Officially authorized spies are stationed in every town and village; they force their presence even into private household parties. Their acts are backed by the Japanese gendarmerie, and woe to the native who dares to resent their intrusion! He will be charged with treason as opposing the Government authorities! The Japanese enlist as sub-spies a large number of the
worst scoundrels in the country. These incorrigibles are paid good salaries, and in many cases given rewards for the merit of their work; not infrequently the well-to-do natives are blackmailed by these spies, and the Government winks at the crime.

Such abuse of the method might naturally be expected, but the worst feature of it all is that it is often used as a machine by the Government in relentlessly crushing out the spirit of nationalism. If a Korean is suspected of keeping alive the spirit of his forefathers, the Government instructs its spies to bring certain charges against him. Upon the testimony of the spies, he will be imprisoned, his property will be confiscated, and he will be punished in such a way as to be disabled for life; or he may even be executed on the charge of treason. Like the medieval ‘Ironwoman’ that crushed its victims without bloodshed, this spy system of the Japanese administration in Korea removes from the country the ablest and best educated Koreans without technically violating the regulations of the colonial policy of the Japanese Empire. Indeed, Baron Saito, the new Governor-General, admitted the cynical truth when he said recently to an _Asahi_ representative that all the Koreans of sufficient intelligence or force of character to lead their countrymen to higher things are either in prison or in exile.”

Excerpt 1, taken from pp. 76-77

“The third governor-general, Saitō Makoto (1919–27), instituted a new policy of cultural rule (bunka seiji) in 1920 that lasted for a decade. Cultural rule introduced a new era that permitted the rebirth of Korean newspapers and political magazines. Governor-General Saitō recognized the fact that the total absence of indigenous, political, social, and media rights in Korea was not so much a sign of success, but rather a major cause of the failure of former Governors General Terauchi and Hasegawa’s administrations. Japanese rule was, according to Governor-General Saitō, moving toward a stage of civilized rule owing to his own new benevolent decision. As a result of this decision Saitō revived the vernacular press in the early 1920s to address key issues of colonial society. This tentative liberal policy of the colonial authorities, however, gradually turned more and more into a sophisticated system of manipulation and control by the end of the decade.

How to interpret the give-and-take between vernacular discursive space and colonial repression has always been a difficult issue. Robinson (1984) argued that in the end the cultural nationalists were co-opted by the colonial authorities. More recently in looking at the 1930s Robinson and Shin have argued that Korea developed a kind of ‘colonial modernity’ that ‘produced cosmopolitanism without political emancipation.’ In the cracks between the official ideology of cultural rule and the growing vociferous demands of the colonial residents, the vernacular media in the 1920s could plant nationalist views on various colonial issues. In fact, through the contentious battle against the colonial authorities, nationalist cultural elites constituted at that time what could be termed a public sphere. Though vernacular newspapers existed throughout the period of Japanese colonial rule, the incipient public sphere of the 1920s should not be interpreted as part of the linear and unbroken development of modernity through colonialism. The severity of official censorship was heavier and more extensive not only before but also after the period of cultural rule. The media, thus, lost their initial critical function and became truly ‘colonized’ by 1926, which in turn led to the demise of the colonial public sphere.
Excerpt 2, taken from pp. 81-84

“Saito’s cultural rule policy was a compromise measure to handle the colonial crisis and earn the favor of the Korean population while continuing to maintain a firm grip on Korea. In December 1919, Saito’s colonial administration decided to give permits to Koreans to publish vernacular newspapers, thinking that the increasing discontent of the colonial population would have been detected earlier if the colonial society had had the ‘safety valve’ of vernacular media...

Governor-General Saito recognized that he needed a grand plan to propagate his new governing doctrine and to further implement a reform agenda.

Some prominent Japanese, such as Yoshino Sakuzo of Tokyo Imperial University, blamed the military rule of former Governor-General Hasegawa for the March First demonstrations; even Japanese Prime Minister Hara recognized the need for a change in Japanese ruling methods in Korea. The failures of the old colonial administration were closely studied, and it became increasingly clear that colonial rule could not be based on force alone. The cultural rule proclaimed by the governor-general laid claim to civilized government, putting great emphasis on the equal treatment of Koreans and Japanese, the extension of Japanese rule to Korea, and permanent peace of the Far East. This policy, however, simply masked the ruling ideology that had always been premised on assimilation. The colonialists’ strategy was basically designed as a two-level strategy. The surface level being a doctrine of cultural politics or ‘civilized rule,’ such as suggested by the reform measures of the new governor-general. The hidden level, which was never officially acknowledged, was a project of building hegemony and co-opting Korean elites through incentives and manipulation. Japan’s covert project for building cultural hegemony has been understood and criticized by nationalist historians as a policy of ‘divide and rule,’ or as a policy of ‘appeasement and manipulation.’ What these analysts often do not notice is that this two-level policy was not a contradiction, but rather something that was consciously designed to make up for the weakness of the cultural rule doctrine.

Saito’s communication policy stemmed from his grand strategy to establish long-term colonial rule on the basis of persuasion and consent. First and foremost this hegemonic strategy was designed to establish a governing coalition that incorporated some pro-Japanese Korean elites. Propagation of communication either favorable to or positive of the colonial ruling ideology was considered to be a vitally important part of Governor-General Saito’s ruling strategy. Saito worked on propaganda activities by personally attending and summoning local magnates to offer propaganda seminars. Nationally well-known figures such as Pak Yonghyo, Yun Ch’iho, and Song Pyongjun were often selected as guest speakers and used as unofficial Korean spokesmen for the colonial government. Initial efforts to create pro-Japanese public opinion by holding political propaganda seminars did not show much success owing to the lack of the speakers’ influence on the native population. However, the colonial authorities continued to resort to similar methods in the 1920s by covertly influencing conservative local magnates.

The colonial government understood the importance of rural areas where the majority of the population remained in a traditional life style, and it tried every means available to separate local publics from the influence of the national anti-colonial movements. Governor-General Saito himself made regular ‘propaganda trips’ to the provinces. In his eight years in office, Saito...
paid visits to the provinces thirty-five times, spending 171 days. During these visits Saito met and explained cultural rule to various opinion leaders of the provinces, such as landlords, literati, evangelists, and local magnates.  

Lastly, manipulating cleavages of class and ideology was an unwritten policy of Saito’s colonial rule in Korea. The favored allies sought by the colonial government were reactionary, conservative forces: the landlord class, the literati, peddlers, former government officials, and the yangban from the last years of the Choson Dynasty. Creation of pro-Japanese groups from among these social allies was an essential measure on which the colonial government in Korea relied. As a result, these pro-Japanese elements acquired important influence in colonial society particularly at times of political crisis. Among the pro-Japanese groups sponsored by the colonial government, early key examples are the School Spirit Society (Kyop’ unghoe), the National Society (Kungmin Hyophoe), and the Comrades of Greater East Asia (Taedong Tongjihoe).

13 Kim Kyuhwan, Ilche ūi tae-Han ŏllon, 169. Cultural politics were devised as a part of a defensive scheme to handle the crisis situation create by the March First movement. Hence, it is important to understand how the sense of colonial crisis affected Governor-General Saitō’s rule in the 1920s. For the 1919 crisis, see Kang Tongjin, ‘Munhwajuŭi ūi kibon sŏngkyŏk,’ 166–67.

15 Pak Ch’ansŭng, Han’guk kŭndae chŏngch’i sasangsa yŏn’gu, 317; Han Paeho, ‘Samil undong chikhue Chosŏn,’ 82–83.

16 The covert strategy of cultural politics was a hegemony building project. An important aspect of hegemony is that its intellectual and moral leadership is ‘objectified in and exercised through’ civil society and not led directly by the state. Joseph Femia, Gramsci’s Political Thought, 24.

17 Those who assert the importance of the ‘divide and rule’ strategy of Governor-General Saitō understand some aspect of ‘hegemony building’ of Saitō’s cultural rule. But hegemony building is a distinct phenomenon constituted by complicated and systematic efforts to form a network of diverse social allies. Collaboration is one element of the grand project, but cannot be identified with the whole project.

18 Kim Kyuhwan, Ilche ūi tae-Han ŏllon, 189.

19 Kang Tongin, Ilche ūi Han’guk ch’imnyak, 26.

20 Ibid, 36-37.

23 Itinerant peddlers (pobusang) were organized on a national basis and used by conservative forces from the late nineteenth century to break up ‘progressive’ political movements.”

Excerpt 3, taken from pp. 84-85

“Although a new era for Korean nationalism had begun when the Saito administration allowed the publication of three vernacular newspapers in 1920: The Tonga ilbo (East Asia daily, the Choson ilbo (Daily), and the Sisa sinmun, there was no ‘liberal’ change of regulations and laws in regulating media and publication. The colonial government did, however, loosen its policy of banning all vernacular newspapers and political magazines. ‘Print capitalism,’ which Anderson (1991) identified as the chief impetus to the spread of nationalism in countries around the world, had developed in late nineteenth-century Korea, before being cut off by Japanese repression in 1910. Japan’s new policy on publication freed cultural nationalists to once again embark on a reformist project. Newspapers were most important for the formation of public
opinion because they cut across all walks of life and served to overcome or confirm misgivings and skepticism about the leadership of national figures.

The corresponding increase of social communication in the 1920s was phenomenal. Among the various new magazines published in the 1920’s were Kaebok (creation) published by the Ch’ondoyo church, Asong (Our voice) of the Korean Youth League, and Ch’ongch’im (Youth) edited by Ch’oe Namson. In the first three years of the cultural rule (1920-1923) some seven thousand organizations were created. Among the daily newspapers in colonial Korea, the most widely read was the Tonga ilbo with thirty-seven thousand subscribers. The official government gazette, the Maeil sinbo, had a circulation of only about twenty-three thousand. The circulation of the Choson ilbo and Choson chungang was about twenty-three thousand and fourteen thousand respectively. The total number of subscriptions to the four major newspapers steadily increased until 1929 when it reached one hundred thousand within the national population of twenty million. As in the period before 1910, newspapers were the heart of the nationalist revival in the period after 1920.

Ch’ŏng Chinsŏk, Han’guk ǒllon sa, 553.”

Excerpt 1, taken from pp. 3484-386
“The birth of Korean New Women was not just a natural reaction caused by centuries of Confucian patriarchal oppression. The movement was a product of the complicated meeting of Confucian patriarchy, the expansion of women’s modern education, the spread of the ideas of Christianity and Western feminism and the imposition of several foreign governments’ imperial power.

Here, an important point must be made. The colonial experience of Korea was significantly different from that of other countries colonized directly by Western imperialists who brought concepts of modernity with their intrusion. Korea, from the end of the nineteenth century to the early twentieth century, experienced imperialism in two forms: the collapse of traditional feudal ideology in the face of Western imperial modernity, and the loss of land and independence through Japanese imperialism…

It is the resultant separation of, on the one hand, cultural intrusion by Western imperialists into Korea’s feudal social order from, on the other, direct colonization by Japan that distinguishes the Korean case from that of most other colonized countries. It is a separation that has had an important effect on the birth of the Korean New Women’s movement. The largely favorable view of Western religion in Korea is one product of this separation. Haseuk La explains this tendency: ‘In the case of Korea, Christianity is commonly viewed as being separate from imperialism, as Korea was occupied by Japan which was a non-Christian country. Therefore, Koreans could not make sense of the symbiotic relationship between Korean Christianity and Western imperialism; rather, they evaluated Christianity as contributing to the build up of Korean nationalism.’

It was possible, consequently, for Christianity to influence Korean women and the women’s movement without provoking a resistance derived from their nationalist consciousness.
At the end of the nineteenth century, when Western imperialism penetrated Korean society in the name of modernization, it shook the cultural foundations of Confucian patriarchy and its caste system, which were the two central pillars of the Korean feudal system. The subsequent conflict between modernity and tradition was unavoidable. In this conflict, women’s status was picked out by many Koreans as the divisive feature that distinguished an oppressive traditional culture from an emancipatory modern culture. In 1888, Younghyo Park, the modernizing protagonist of a failed coup against the Korean dynastic regime, insisted on the prohibition of early marriage and polygamy, and the abolition of the law prohibiting women to remarry. Early marriage, concubinage, and the prohibition of women’s remarriage in particular became targets of modernizing intellectuals’ criticism of Confucian patriarchy.

In the middle of this nineteenth-century and early twentieth-century reform movement, many women challenged the traditional women’s consent to male dominance and set up new counter-hegemonic discourses. Christianity especially influenced Korean women. Even though Christianity was a patriarchal religion in its Western context, some Korean women found a liberating discourse within it: men and women were equal under God. Korean women reformers found they could use this discourse to attack Confucianism’s naturalization of an unequal relationship between men and women...

Another way in which Christianity planted the early seeds in the 1920s New Women’s movement was by playing a leading role in the expansion of women’s education. While the first state-sponsored public school for girls was not opened by 1908 and only three private schools for girls existed in Seoul at the time, Protestants had already built 732 elementary schools, nineteen middle and high schools and one university around Korea. Before 1905, 174 schools for girls were founded by Protestants, and women students comprised 30 per cent of the total 18,000 students attending Protestant schools in 1905. This notable increase in women’s schools and women students signified not only the success of a Protestant strategy to spread Christianity through education, but also the growth of the strong desire of Korean women to liberate themselves through the education provided by these non-Confucian religious institutions.

13 Lee analyses the important roles missionaries played as pioneers in opening the Korean market to imperial interests in contrast to the way they are usually seen. He emphasises the American missionaries’ nationalism by discussing a US marine who was also a teacher and who hoisted the Stars and Stripes along with Korean flags in a missionary school. He criticises the educational work of missionaries because it made Koreans worship Western imperialists and Westernisation. See Haesuk Lee, ‘What Did American Missionaries in the Early Days Do?’, in Correcting 37 Events of Our History, ed. the Institute of Historical Problems (Yoksa Bipyong Press, Seoul, 1993), pp. 23–5.

Excerpt 2, taken from pp. 387-388

“One crucial commonality of Korean New Women, especially these three prominent New Women, Haseuk La, Wonju Kim and Myungsoon Kim, was their studies in Japan. All three studied in Japan around the same time (La, 1910-13, W. Kim, 191?; M. Kim, 191?). This was a
time when Japan was establishing its colonial rule in Korea; but it was also a time when many Japanese feminists were engaged in the debate over their own construction of ‘the New Women’. By 1910, the Japanese were instituting a centralized, mobilizing, nationalist, oligarchic state which pursued rapid industrialization at the same time as it was modernizing its military. In a Japanese context, the ideas of the New Women seemed to have two major aspects. On the one hand, the term denoted a group of women who asserted their own new self-identity and sexuality. Hiratsuka Raicho, in 1910 the first Japanese women to identify herself as a New Woman, made no secret of her self-conscious absorption of ideas from Western liberal feminism. On the other hand, Japanese feminist advocates for the New Women saw them as offering a new ideal type of women in Japanese society. Thus, the New Women did not represent only one ideological tendency for the movement’s Japanese supporters.

Excerpt 3, taken from p. 393

“Haejung Cho defines the era from 1900 to 1920 as a time when Korean liberal idealism strengthened progressivism, while she sees the era after the mid 1920s as a conservative era, when traditionalists re-emerged to oppose the products of the preceding progressive era. This change in the 1920s was related to a change in the thinking of Korea’s colonized intellectuals. After colonization, Japanese imperialists practiced a modernization policy in its Korean colony. This served to rob any Korean male intellectuals of their will for modernization, which they had believed to be the only way to empower Koreans. These male intellectuals searched for an alternative way of bringing about their intellectual nationalist restoration. Thus, it was in the 1920s that many once progressive intellectuals came to believe that through deconstructing tradition as a national cultural root and symbol, the New Women’s challenge to Confucian patriarchy could weaken the Korean nation’s power to stand against Japan.

65 Jongwon Lee, ‘Role Conflict for New Women’, p. 74.”

Excerpt 4, taken from p. 395

“From the mid 1920s, many nationalists who had previously advocated women’s education as integral to Korea’s modernity began to oppose the ideology and practices of New Women. Only a decade earlier they had welcomed challenges to Korean patriarchy as a modern nation-revitalizing discourse, especially with regard to women’s matters. By contrast, in the mid 1920s, in their revised nationalist discourse aimed now against Japanese colonialism, tradition was reformulated and revalued. For instance, Gwangsu Lee, a famous male novelist and an influential enlightenment activist during the early years of the Japanese era, after 1910, asserted that Koreans could have self-control only through self-enlightenment and called for the destruction of traditional morality. In his first novel *Mu Jong* (Without Love), published serially in *Maeil Sinbo* (Maeil Newspaper) during 1917, Gwangsu Lee criticized the absurdity of the existing marriage system and its perspective on love. He claimed that ‘the relation between wife and husband in Korea was a permanent illicit union’ and the old perspective of chastity was ‘a kind of religious superstition’. However, by the 1920s he had changed his opinion. He began now to celebrate motherhood and to criticize married women who had paid occupations. In his later novel, *Huk* (The Soil), published in 1932, he described a man’s conflict in choosing between the traditional woman, because he admired naïve women who maintained traditional
Gwangsu Lee’s reaction reflected the redirection of Korean nationalists’ discourse. Under colonialism, male nationalists thought that the New Women’s direct denial of existing patriarchy and sexual morality might cause the collapse of Korean tradition and solidarity.

Excerpt 1, taken from pp. 221-222

“...A re-examination of political life in colonial Korea would further move us beyond such a dichotomy and allow us to explore the possibility that critical public spaces emerged not only within but between national and imperial communities. I illustrate my point by using the case of the citizens’ movement for public electricity (*denki fueika undo*). Launched by urban residents across Korea in the late 1920s and early 1930s, this movement aimed to reduce public utility bills by bringing electricity under the direct management of each municipality, rather than leave it in the hands of a corporate monopoly.16 Pivotal to the municipalization campaign was the role of Korean and Japanese members of the recently installed city assemblies, who constituted a small but influential local bourgeoisie. Conventionally viewed by scholars of Korea as handmaidens of state bureaucracy, these civilian elites led the campaign with new authority and awareness as representatives of the ‘people’, as they performed an intermediary function of channelling public opinion to the state and putting ‘the state in touch with the needs of society’.17 In bringing the daily concerns of local residents into public and policy debates, the assemblymen adopted a shared language of common good to challenge the state-sanctioned corporate monopoly on public utilities and the authoritarian structure of governance more broadly. And, while the assemblymen clashed viciously over strategies to realize their vision, with each camp claiming to represent the popular will, they shaped and spread the concept of a public and publicness (Japanese: *kokyosei*, Korean: *konggongsong*) in the process.

16For a study on consumer agitation over water rates in London in the 1880s, a period of transition from private to public ownership, that provides a fascinating parallel with the municipalization campaign in Seoul, see Vanessa Taylor and Frank Trentmann, ‘Liquid Politics: Water and the Politics of Everyday Life in the Modern City,’ *Past and Present*, no. 211 (May 2011).

Excerpt 2, taken from pp. 223-224

At the end of the 1920s Korea's political landscape was in a state of flux. Having created the Sin'ganhoe (New Korea Society) as a united front of nationalist activity in 1927, Korean moderates and radicals clashed over its leadership, its regional branches soon falling into the latter's control.20 As the nationalist movement gravitated towards the left, the colonial regime flexed its muscles, dealing a devastating blow to the communists and socialists, who were
detained or driven across the northern border into Manchuria and the Chinese interior. For those who stayed in Korea and out of jail, however, political life began to take a different turn. In 1929 Saito Makoto, governor-general of Korea in 1919-27 and 1929-31, returned from a conference in Geneva to assume his short second tenure. As a fitting conclusion to his 'cultural rule', Saito enacted a second round of local government reforms to invest the existing advisory councils with legislative authority and to create new assemblies at provincial, municipal and selected town or village levels. City assemblies, the most important units of local governance, were now permitted to legislate on the general economic and educational affairs of the municipality. A fair ethnic representation was also ensured by the stipulation that the number of Japanese and Korean members could not be less than a quarter each of the overall quota.21

As a result of these reforms, Korean interest and participation in local politics showed a visible increase in the 1930s. To be sure, voting qualifications remained unrevised and the electorate small: even in May 1935 only 4.63 per cent of the local population (Japanese: 12.3 per cent; Koreans: 2.4 per cent) were eligible for the city assembly elections held in fourteen cities.22

But, when limiting our focus to those who did run for office, we find that Koreans fared rather well, taking much greater strides than their Japanese counterparts. Between 1930 and 1940 the total number of Japanese office-holders, including officials and employees of the government-general and local assemblies, rose by 75 per cent (from 40,398 to 70,845), whereas that of their Korean counterparts rose by 129 per cent (from 24,675 to 56,503). In 1930, 8,637 Japanese and 7,628 Koreans served in city and provincial assemblies and on school boards, but their numbers became more or less equal by 1940 (Japanese: 20,938; Koreans: 20,501).23 In ensuring a certain balance of power between Japanese and Korean delegates, these statistics suggest, the new system of legislative assemblies undercut the settlers’ ability to dominate local politics.

23 Namiki Masato, ‘Shokuminchiki Chosenjin no seiji sanka nit suite: kaihogoshi tono kanren ni oite’ [Political Participation of Koreans in the Colonial Period: Its Relationship with Post-Liberation History], Chosenshi Kenyukai Rombunshu, xxxi (1993), 35.”

Excerpt 3, taken from pp. 244-246

“Nevertheless, the cacophony of voices of the 'people' channelled by the city assemblymen, community heads and the media finally moved the local authorities to begin a new round of negotiations with Keijo Electric. After a series of protracted discussions (whose details were never publicly disclosed) between the governor of Kyonggi province and Keijo Electric's managing director, Musha Renzo, by the spring of 1932 the company executives had come to accept as a compromise much of what was outlined in the alternative proposal.118 The colonial government extended the company's franchise as planned from July 1932 to August 1935 but, in
accordance with the proposal, the headquarters of Keijo Electric was moved from Tokyo to Seoul in May 1932. As token compensation, Keijo Electric also donated a million yen to Seoul and a hundred thousand yen to other cities, towns and villages where the company had branches.\footnote{Ibid., 10 Apr. 1932; Choson ilbo, 29 Apr. 1932} Moreover, the company agreed to reduce gas and electricity prices as far as possible at each review.\footnote{Son, Ilche kangjomgi tossi sahoesang yon’gu, 427-9. The one million yen was used to build a low-fee clinic and a residents’ hall.} Short of achieving the goal of municipalization, the residents’ movement managed to win significant concessions, at least from the standpoint of gradualists within the city assembly.

Not only did the campaign manage to exert pressure on Keijo Electric to respond to public opinion, it also compelled the colonial state to look at itself ‘through the eyes of the public’.\footnote{Bhattacharya, ‘Notes towards a Conception of the Colonial Public’, 156.} The advocates of municipal electricity continually enjoined the quasi-state Keijo Electric to focus on community (Japanese: kokyo, Korean: konggong) rather than corporate interests, urging greater self-awareness as a company in charge of managing utilities that affected the daily lives of residents. That the campaign enabled the voice of the people to be heard, as the chief of the Electricity Section of the government-general’s Communications Bureau later acknowledged, served to shake up the entire industry and its supervising state authorities by ‘awakening’ them to the fundamental ‘mission of electricity as a public utility’.\footnote{Chosen no denki jigyo o kataru, ed. Sasaki 200.} In arguing that city planning must proceed in dialogue with public opinion, the residents’ campaign for municipalization broadly served as a referendum on the colonial state’s exercise of power.\footnote{Chosen no denki jigyo o kataru, ed. Sasaki 200.} And, as the ultimate outcome of the campaign showed, the colonial government made significant concessions to the power of public opinion that problematized governing processes over which the state authority had hitherto exercised a near-monopoly.

\footnote{118 Ibid., 10 Apr. 1932; Choson ilbo, 29 Apr. 1932} \footnote{119 Son, Ilche kangjomgi tossi sahoesang yon’gu, 427-9. The one million yen was used to build a low-fee clinic and a residents’ hall.} \footnote{120 Choson ilbo, 29 Ap. 1932. The Seoul Chamber of Commerce and Industry also appears to have responded to the residents’ campaign by requesting a reduction in price at the time of Keijo Electric’s Review in May 1935, stressing ‘the urgent need’ to reduce the charges for household usage and small factory operations in Seoul: Keijo Shoko Kaigishio, Chosen Keizai geppo, ccxxxiii(1935), 95-6.} \footnote{121 Bhattacharya, ‘Notes towards a Conception of the Colonial Public’, 156.} \footnote{122 Chosen no denki jigyo o kataru, ed. Sasaki 200.} \footnote{123 The campaign also affected the way the colonial administration managed society. New awareness of the need to incorporate civilians into the governing process translated into a ‘corporatist’ approach adopted by the government-general to manage local communities in the 1930s. Gi-Wook Shin and Do-Hyu Han, ‘Colonial Corporatism: The Rural Revitalization Campaign, 1932-1940,’ in Shin and Robinson (eds.), Colonial Modernity in Korea.”

| **Standards and Practices** | **MWH.9-12.10:** “Imperialism involved land acquisition, extraction of raw materials, spread of Western values and direct political control.”  
**MWH.9-12.11:** “The consequences of imperialism were viewed differently by the colonizers and the colonized.”  
**MWH.9-12.1:** “The use of primary and secondary sources of information includes an examination of the credibility of each source.”  
**MWH.9-12.2:** “Historians develop theses and use evidence to support or refute positions.”  
**MWH.9-12.3:** “Historians analyze cause, effect, sequence, and correlation in historical events, including multiple causation and long- and short-term causal relations.” |
| **Staging the Question** | Students will read a CBS News article about the ongoing controversy between Japan and South Korea over the issue of World War II-era Korean “comfort women.” After individually reading the news article, the teacher will share an image of the comfort woman memorial statue in Seoul with the students. As a large group, the teacher will lead the class in informal verbal MOTU analysis for each source. The main point is for students to understand how salient the issues stemming from this era still are to Japan and South Korea. |

The unit design template is by Grant, Swan, and Lee (2014) from the C3 Teachers. Grant, Swan, & Lee (2014). *IDM Working Blueprint Template*. C3 Teachers. [https://c3teachers.org/inquiry-design-model/](https://c3teachers.org/inquiry-design-model/)
Staging the Question

Students will read the article linked here.

Students will view the following image of a comfort woman memorial statue in Korea. The teacher should note to the class that it was placed in front of the Japanese embassy in Seoul in 2011 by Korean activists who wanted to shame Japan for its lack of official apology on the issue.

![Comfort Woman Memorial Statue](https://www.wsj.com/articles/japan-and-korea-have-long-disputed-comfort-women-1451337632)

After viewing the article and the photo, the class as a whole will analyze both using the MOTU framework. This may be done informally and verbally, or written out on the board if the teacher wishes. The main idea is to understand that this issue remains a salient source of disagreement between the two countries today.
Unit 3, Lesson 1

Objectives:
- SWBAT evaluate Japan’s reasons for changing Korean policy beginning in 1931.
- SWBAT understand the World War II era Japanese policies which are the basis of modern tensions between Korea and Japan.
- SWBAT construct an argument supported by evidence found in both primary and secondary sources.

Standards:
MWH.9-12.10: “Imperialism involved land acquisition, extraction of raw materials, spread of Western values and direct political control.”
MWH.9-12.2: “Historians develop theses and use evidence to support or refute positions.”
MWH.9-12.3: “Historians analyze cause, effect, sequence, and correlation in historical events, including multiple causation and long- and short-term causal relations.”

Lesson compelling question: Why and how did Japan’s Korea policy shift with the outbreak of the Fifteen Year War in Asia (World War II in Asia)?

Hook (5-8 minutes):
- Making inferences/predictions (5-8 minutes): Prior to class, the teacher will make the following mini-source available to students. This should be done by projecting it onto the whiteboard. The teacher should also make the text available to students via an online learning management system, such as Google Classroom. The teacher will tell students they will be reading a source about the outbreak of the Fifteen Year War in Asia, beginning with Japan’s invasion of Manchuria in 1931. Students will be given approximately 1 minute to read independently and silently. (See under “Text for hook” after the closure in this lesson plan.)
  - After the time is up for students to read, the teacher will pose the following questions to students.
    - Why did Japan invade Manchuria?
    - Based on Japan’s invasion of Manchuria and the outbreak of the Fifteen Year War, can you infer how Korean policy will be affected?
  - Students will voluntarily supply responses. After 4-6 responses have been shared, the teacher will move on to the main body of the lesson.

Body (30 minutes):
- Jigsaw groups (30 minutes total):
  - The teacher will begin by splitting the class into four groups. The number of groups will vary depending on class size, but each group should have approximately 3-5 members. If class sizes are larger, the teacher may create additional groups and assign the same source(s) to two different groups. After splitting the class into groups, the teacher will verbally give directions. The teacher should also project directions and a general outline for the day on the whiteboard so students may follow along.
  - Each group will be assigned either one or two of the featured sources for the lesson. Group 1 will be assigned source A, group 2 source B, group 3 source C, and group 4 sources D and E. Students will receive 15 minutes to complete MOTU analysis for their assigned source. Groups should choose a spokesperson and be prepared to peer teach/share out upon completion.
• **Peer teach/share out (15 minutes):** When the 15 minutes are up, the teacher will verbally alert the students. Each spokesperson will share out/peer teach by standing near the whiteboard (or another appropriate location near the front of the room) and verbally sharing his or her group’s answers. The teacher should project blank MOTU worksheets on the whiteboard, one for each group. While the spokesperson is peer teaching, another student from the group should be typing in his or her peer’s answers. The worksheet should be projected onto the whiteboard as the student is typing, so it is updated in real time. Each group should receive adequate time to share its answers.

**Closure (10 minutes):**

- **Large group debrief (5 minutes):** The teacher should keep the MOTU analyses projected on the board. The teacher will briefly review each group’s analysis. The teacher will bring it into view on the whiteboard and ask students to verbally share what they believe is the most important takeaway from each source. After all sources have been reviewed, the teacher will introduce the exit ticket.

- **Exit ticket (5 minutes):** The students will answer the lesson compelling question on an exit ticket, either by writing it on a piece of paper or typing and submitting it digitally via an online LMS. Answers should be 3-5 sentences. Regardless of format, students must be sure to submit the exit tickets to the teacher before the end of the class period. Finally, the teacher will assign homework for the following day. Student should read lesson 2’s featured sources and analyze each using the MOTU framework.

**Text for hook:**

“The Permanent Conflict in Manchuria

The industrial development of Japan is, of course, built on iron and coal. She secures an important share of these essentials from Manchuria. For instance, probably half of the pig iron imported into Japan comes from Manchuria, and imports are roughly one-fourth of local Japanese production. In the case of coal, Manchuria’s production is about a fourth of Japan’s. Of the Manchurian coal perhaps a third is exported to Japan. While the supply of these materials is important in peace time, in case of war Japan’s other foreign sources might be cut off; then the Manchurian coal and iron would be indispensable.

When Japan counts up her reserves of iron and coal she becomes more and convinced than ever that her very life depends on the control of the Manchurian mines and the transportation facilities which will bring their output to her shores. At the present rate of consumption the iron ore reserves in Japan are entirely inadequate. If domestic ore alone were used to manufacture the iron and steel consumed annually in Japan, the estimated utilizable ore would be exhausted in thirteen years and the total reserves, including low grade ores, in about twenty-five years.”

**Sources:**

**Source A:**

Excerpt 1, taken from p. 196:
“As they developed policies for the new Manchurian state, Japan’s rulers also revised their strategies toward the older colonies of Korea and Taiwan. They no longer believed it enough to seek local stability and local profits. They redefined these colonies as places where human and material resources should be mobilized to support the expanding empire. In Korea beginning in 1931, Ugaki Kazushige took office as governor general. He launched ambitious and harsh economic and social policies. The colonial regime took a more aggressive stance toward northern Korea’s forest resources after the takeover of adjacent Manchuria. Colonial officials and private Japanese interests treated the rich forests on both sides of this border as a single region, and they harvested vast tracts of timber for processing in state-owned lumber yards as well as private pulp factories. Considerable deforestation resulted.¹⁴

Ugaki’s regime also encouraged Japanese industrialists to invest in the mining of strategic ore and metals, electric power generation, chemical (explosives) and fertilizer production, and the production of iron and steel. Some Korean entrepreneurs were able to found profitable industries as well. But regardless of the ownership, most industries drew on Korea’s inexpensive labor supply to feed products and resources to Japan’s own increasingly militarized economy. To mobilize human resources, Ugaki pushed forward an increasingly coercive program of ethnic assimilation in the schools. He expanded compulsory Japanese-language instruction and sharply limited the teaching of Korean language in schools. By the late 1930s, Korean had been banned entirely.¹⁴

Excerpt 2, taken from p. 200:

“The military also supported several new business combines in hopes of nurturing sympathetic private sector allies, especially in the development of Manchuria. These were called the ‘new zaibatsu,’ a group of conglomerates centered in heavy and chemical industries. They benefited greatly from military demand, and some, such as Chisso Chemical Fertilizer and Showa Denko, grew to be industry leaders and survived the war. The new zaibatsu were particularly dominant in Korea. But they did not have their own banks; in fact, the established old zaibatsu constituted the major source of direct investment in Manchuria throughout the 1930s.

In this fashion, industrialists old and new followed the flag and moved into business in Manchuria in close collaboration with the military and civilian bureaucracy. In addition to zaibatsu funding, development in Manchuria and Korea relied on what officials called ‘comprehensive technology.’ The term reflected a desire to rationalize economic life through massive engineering projects. The Sup’ung Dam, built on the Yalu River between Korea and Manchuria, was the largest dam in Asia when completed in 1943. It generated electricity for the growing colonial chemical industry. The colonial laborers who built such dams faced not only grueling hours and unhygienic conditions, but also strict surveillance by management and police who feared subversion or resistance. The afterlives of these projects were significant: Bureaucrats and engineers who cut their teeth in the colonies went on to build dams in Japan and Southeast Asia after the war.²¹ The Sup’ung Dam today adorns North Korea’s national seal.

Excerpt 3, taken from p. 201
“Under Governor General Ugaki, the colonial regime in Korea implemented a similarly named Rural Revitalization program to identify model villages, which would take the lead in projects to raise output and reduce social tensions, and thereby increase the loyalty of Korean subjects. Some Koreans had already been organizing campaigns for ‘rural regeneration’ with a stress on traditional values of frugality or filial piety. The state project of Rural Revitalization dissolved these private efforts, but it incorporated many of their initiatives. As in Japan’s home islands, one finds a transwar process here. The regime of Park Chung Hee (1963-1979) undertook projects of rural reform with a similar focus on both economic improvements and ‘traditional’ values. The combination of a traditionalist rhetoric of rural solidarity and modernizing strategies of better farm management was a striking feature of the drive to revitalize rural Japan and its Korean colony. This mix echoed social reform projects of earlier decades. As in the 1920s, the rural reformers offered particular hopes to women and promised them new roles. Women were exhorted to improve kitchen design and hygiene and to organize everyday life more efficiently and scientifically. These responsibilities amounted to a significant public role in the community. Many in Japan and some in Korea responded to the campaigns with enthusiasm.

Source B:
Excerpt 1, taken from p. 141:

“Japan’s mounting crisis on the Asian continent initiated yet another review of its Korean administrative policies. Aware of the Korean Peninsula’s strategically critical geographic location, the Japanese government realized that success on the Asian continent could not be realized without Korean support and cooperation. In 1938 the government-general produced an extensive report that advised measures to strengthen Naisen ittai (Japan-Korea, one body). The report, distributed just over a year after the Japanese military’s July 1937 encounter with the Chinese at the Marco Polo Bridge, introduced measures required for Japan to realize a ‘complete strengthening’ of Korean assimilation in accordance with the circumstances of the times.”

Excerpt 2, taken from pp. 146-148:

“Vice Governor General Ōno Rokuichirō headed the committee designated to draft policy recommendations to be included in this second document. This committee consisted of distinguished Japanese and Koreans in the areas of business, education, and government administration. The contents of the Counterplan Proposal indicated the growing crisis in northern China that had evolved from the Marco Polo Incident, a relatively minor confrontation between Japanese and Chinese troops that escalated into a prolonged battle. The strategic proximity of the Korean Peninsula resting between the Asian continent and the Japanese archipelago required the Japanese government to more closely integrate the Korean people into its empire. The consequences of failure would be most critical to the empire’s future.

The Counterplan Proposal addressed a major concern emphasized in two reports penned just after Sunjong’s 1926 funeral: the futility of expecting Koreans to assimilate as Japanese
should they be provided access to their traditional culture, including the Korean language-based media. The situation of the times no longer afforded the luxury of gradual assimilation, but required procedures that expedited the process. The first chapter of the Counterplan Proposal quoted from the 1910 Imperial Rescript on annexation. It then projected the extent to which the Korean people must be assimilated, before concluding by detailing how Koreans and Japanese would benefit from a closer relationship:

The roots (konpon) of [Japan’s] administration of Korea are grounded in the sacred words isshi dōnin (imperial benevolence) extended to our peninsula brothers. It aims to bathe them in the immeasurable imperial favors (kōtaku), to attain in both name and reality (meijitsu) their complete imperialization (teikoku kōminka). Leaving not the slightest gap, we will forge a Japanese-Korean unified body to confront future complications initiated by the circumstances of the times (jikyoku). Together we will advance the mission of realizing the great spirit (taiseishin) of international brotherhood (hakkō ichiū) from a commissary base to be established [in Korea] to assist in the Empire’s continental management.

The Counterplan Proposal centered on three broad areas: education, participation, and unity. It encouraged the administration to provide the Korean people with proper ‘guidance and enlightenment’ (shido keihatsu). It advised ways to strengthen Korean links with Japan by engaging their participation in nation-building activities, specifically highlighting holidays and Japanese calendar use. It proposed ways for the government-general to forge ties between Koreans and other peoples of Japan’s continental empire, particularly with Manchurians and Chinese.

Education facilities again provided the most important places to disseminate to Koreans the spirit that the present circumstances required. The Counterplan Proposal advised that this instruction be based on three fundamental principles: clarification (meichō) of the national polity, endurance (ninku) of Naisen ittai, and discipline. The instruction was to emphasize history, particularly the diplomatic, cultural, and blood connections that the Japanese and Korean peoples have shared from ancient times. It would encourage national language acquisition. And it would foster within Korea’s youth the ‘spirit of industry and patriotism.’ The Counterplan Proposal called for an expansion of education facilities to ‘allow everyone to attend school,’ and suggested ways to engage Koreans further in social education activities. Museums should be built, movies produced, and seminars organized to educate Korean adults. This instruction aimed to provide means for the Korean people to ‘rationalize their lifestyles and soften (yūka) their [Korean] mannerisms.’

A third area that the Counterplan Proposal targeted was imperial unification. Its authors recognized the need to establish links not just between Japanese and Koreans, but also between Koreans and continental Asians, devoting far greater attention to this latter concern. It advised that ties be established through educational and cultural exchanges between instructors at universities and professional schools, students and youth leagues, as well as information disseminated through the media and exhibitions. These suggestions depicted Koreans serving as living testaments of Japanese success, a display to allow the Chinese and Manchurians the opportunity to view their potential development should they choose to cooperate.

See note 86, chap. 4.
Strengthening Japanese-Korean ties contributed to the military role that the Japanese envisioned the Korean Peninsula assuming. The Counterplan Proposal revealed ideas on how Korea’s northern provinces could serve the Japanese military. The region contained valuable coal mines and industrial facilities that the enemy might target for bombing. Fortifying this region militarily both protected this critical resource and strengthened the Japanese war-waging capacity on the Asian continent. The Counterplan Proposal envisioned the militarization of this region strengthening the Japanese capacity to ‘distribute weapons in a flash’ to troops fighting in China.28

Implied, but not directly stated, was the importance of the empire gaining Korean cooperation and establishing military facilities on the peninsula. The Japanese could not expect to succeed on the Asian continent unless it tamed this region, often described as wild and uncivilized; it harbored many insubordinate (futei) Koreans.29

See, for example, Kitakan Sanjin (probably a pseudonym), who offers this description in his “Chōsen no futei senjin” (Korea’s Lawless Koreans), Chōsen oyobi Manshū (November 1921): 81–82; and Pak Sanghŭi, “Chōsen sehokujin no tokushitsu” (Unique Characteristics of the Northwestern Korean), in Chōsen oyobi Chōsen minzoku (Korea and the Korean Race), edited by Chōsen oyobi Chōsen minzoku, 112–23 (Chōsen shisō tsūshinsha, 1927). I describe these images in ‘Images of the North in Occupied Korea.’”

Ch. 11: Becoming Japanese
Excerpt 1, taken from p. 112
“Kang Sang’uk [Kang Sang Wook]
(m) b. 1935, physicist, North P’yongan Province:
The Japanese in almost every community set up Shinto shrines high on the hill and once a month they held a ceremony there. They ordered everyone, Japanese and Korean, to attend and bow to the gods of Shinto. The one in Kanggye city was quite large. Even though my family was Christian, I went along with the school group. We went during class hours and we kids trooped along without thinking too much about it.

Each village was supposed to have a shrine, but many villages were too small to bother with. Our ancestral village of Toktari never had Japanese people or a Shinto shrine. It was simply too small.

One Christian seminary told its people not to bow to the shrines and consequently they suffered continual persecution. Many others did as they were told in order to survive. As a child, I didn’t notice all this. Mostly I played happily, drawing airplanes, drawing maps with different colors.

What did the shrine look like? As you waked up the hill, before you got to the shrine itself you came to a red torii gate, just standing there. I mean, usually a gate serves as an opening
in a wall, but there never was a wall, just the gate. It was big – wide enough for several of us to walk through side by side.

Farther up the hill, in a clearing where all of us could stand, was a little house very much like a small Buddhist temple, with the doors closed. From a building next door, the priest came out dressed in full regalia – very impressive, great robes and scepter – and he stood in front of the shrine. My teacher told us that inside was a statue of one of their goddesses, Amatersau Omikami, the sun goddess, but I actually never saw inside. It was like the Holy of Holies, very sacred. The priest shouted, ‘Bow,’ and we all bent over from the waist with flat backs, and that’s it, that’s all. It was over. What took so long was you had to climb the hill and then walk back down.”

Excerpt 2, taken from p. 113:
“YI OKPUN, (f) b. 1914, housewife, Kyonggi Province:
Of course we had to go to the shrine on Namsan (South Mountain). The head of our neighborhood group was Japanese; that’s why we had to do everything he said. If we didn’t go, we didn’t get any food ration. We didn’t go alone. A whole group went – our whole neighborhood cell, about ten households, you know. Even with my babies, I had to take the streetcar, then walk all the way up the hill. It was hard.
We had to go up a lot, sometimes once a week, certainly two or three times a month. The ceremony took about, let’s see, thirty minutes. They pour some water, you clap your hands, then you come down and get the food ration stamps.
Later when we changed our name, I just followed whatever my husband said. I didn’t care. Just get the food ration card!”

Excerpt 3, taken from pp. 115-116
“KANG SANG’UK [KANG SANG WOOK],
(m) b. 1935, physicist, North P’yongan Province:
We lived in many different towns and I attended many different schools, but it was always the same. Every morning of every school day, sun, rain, or snow, we began with an assembly on the school grounds for attendance and announcements. Every single day the principal gave a homily and we all bowed east toward Tokyo and the Emperor and shouted ‘Tenno Heika Ban Zai’ – ‘Long Live the Emperor.’ About five or six times a year, on very exceptional occasions, they brought out a special scroll containing the Emperor’s proclamation. Two such days were December 8 for the Declaration of the Second World War, and in April for Education Day.

The principal stood in front of us on a podium. The vice principal brought out the scroll in its lacquer box, elegantly wrapped with the chrysanthemum seal of the Japanese Emperor. He held the box high above his bowed head, eyes averted, wearing white gloves so his hands would not even touch the box. The principal, also wearing white gloves, received the scroll and read it reverently, then returned it to the vice principal. All of us kids were supposed to bow our heads and not look upon the sacred words of the Emperor, but of course we peeked.
Each of these special days had its own speech and we had to memorize them in civics class. The proclamations, of course, were totally serious. Ch’in omoni (‘We the Emperor, consider’) wa ga (‘our’) k’o so k’o so (‘divine imperial ancestors’).
But kids, you. Know, are not the least bit impressed with speeches, and we made games out of them. We stood facing each other with great ceremony, arms crossed over our chest, intoning heavily ‘Ch’in omoni,’ throwing our arms wide to embrace the universe ‘waaaaaa ga’
and, surprise! One kid would quickly reach over and tickle the other under his outstretched arms ‘k'o so k'o so, k'o so k'o so.’ Gales of laughter!

When I was about nine and in fourth grade, we lived in Kanggye and actually had Japanese neighbors who also had fourth- and fifth-grade children, just like us. We became good friends, exchanged comic books, and went to each other’s birthday parties. On rainy days we’d play marbles, and then we found out that in their own Japanese schools the kids also poked fun at the Emperor’s speeches, but they, of course, didn’t dare do it in public. They even did some things we hadn’t thought of.”

Excerpt 4, taken from pp. 117-118

“PAKSONG’IL,
(m) b. 1917, farmer/fisherman, South Kyongsang Province:

I got beaten up many times by the Japanese because I resisted changing my name to Japanese. Everybody around me changed theirs, but I had lost my grandfather and then my father, and had taken over the responsibility of eldest son. That is why I tried not to change my name. But I got tired of being so badly beaten.

Out of desperation, I wrote to my aunt in Seoul, the one who had been arrested for the Independence demonstration. I asked her, should I do it? By return mail, she said, ‘Do you have two fathers? If you have two fathers, then change your name to the name of your Japanese father.’ She was furious!

So I held out a while longer, but I couldn’t stand any more persecution. I finally changed my name to Otake. The O in Chinese characters is Korean Tae, the first syllable of the place where I was born. The take, meaning bamboo, is for the huge bamboo grove behind our house. So my name signified that I was born in Taebyon township in the house with the bamboo grove in back.”

Excerpt 1, taken from pp. 391-392

“As the Pacific war escalated, the Japanese stepped up their efforts to obliterate the colonial subjects’ collective Korean identity altogether. Governor-General Minami Jiro, who took office from 1936 to 1942, imposed new rules on the Koreans such as the obligatory recitation of the ‘Pledge of Imperial Subjects’ (1937), the compulsory use of Japanese language (1938), and mandatory worship at Shinto Shrines (1939). Koreans were forced to recite the ‘Pledge of Imperial Subjects’, which included such phrases as: ‘We are the subjects of the Great Japanese Empire’ and ‘We are fully loyal to the Emperor’. The ‘Pledge of Imperial Subjects’ had to be recited not only in schools but also in public whenever the Koreans received food rations or purchased train tickets. Also, the Korean colonial subjects were forced to accept Japanese as the national language; while Japanese language programmes expanded and strengthened, limited Korean language courses that had been offered as elective in the schools were dropped altogether from the school curriculum by 1938. It should also be noted that despite the fact that graduation from Japanese public schools was a prerequisite for economic advancement, Koreans continued to patronise, in large numbers, private schools run by Koreans or by Western missionaries. But near the end of the war many such schools were forcibly
closed down, and in the surviving schools the Korean teachers were replaced by Japanese counterparts.

The most egregious example of the assimilation policy is the ‘Name Change Order’ issued in February 1940 by which Koreans were forced to take Japanese names within six months of the proclamation. Those Koreans who retained their Korean names were not allowed to enroll at school, were refused service at government offices, and were excluded from the lists for food rations and other supplies. Faced with such compulsion, many Koreans ended up complying with the Name Change Order. Such a radical policy was deemed to be symbolically significant in the war effort, binding the fate of the colony with that of the empire.

Under the General Mobilisation Order, the education sector in colonial Korea was transformed to meet the needs of the changing situation. The 1938 Educational Ordinance set forth three agendas: ‘clarifying the national polity’ (kokutai meijing), ‘Japan and Korea as one body’ (naisen ittai), and ‘growing stronger by overcoming hardship’ (ninku danren). These were unequivocally expressed in the ‘Pledge of Imperial Subjects’ that the Japanese forced students to memorise and recite daily in unison in all the schools.

50 Kada Tetsuji, Shokumin seisaku [Colonial Policy] (Tokyo: Daimondon sha, 1942). Such an openly declared assimilation policy of the Chosen Shotoku is displayed exhaustively in Tetsuji’s work.
51 Sawayanagi Masataro, Chosen kyoiku wa Nihongo fukyu ni zenyoku o keichu subeshi [Korea’s Education should Concert its Efforts to Adopt Japanese], in Sawayanagi masataro zenshu [Sawayanagi Masataro papers series], vol. 8 (Tokyo: Kokudosha, 1976). The justification by the colonial authorities for the forced use of the Japanese language in schools is documented in Masataro’s papers.

Naoki Mizuno (Kyoto: Jimbin Shoin, 2004), 35–77. Until the late 1930s, Koreans were not allowed to have Japanese names even if they chose to, as the colonial authorities preferred to be able to distinguish the heritage of its citizens by their names on paper. The drastic change in policy was intended to dismantle the traditional Korean family structure and at the same time to accelerate the assimilation process with the escalation of war.

Excerpt 1, taken from pp. 608-609

“The purpose of State Shinto was to unify the Japanese people ‘in a single cult’ with the emperor as head priest, and to have them worship his ancestors and the illustrious dead as national deities. All the Shinto shrines were assigned an official rank within the single hierarchy, with Ise Jingu (Grand Shrine), dedicated to sun-goddess Amaterasu, the mythic ancestor of the emperors, at the top. All the people of Japan at birth were organized to be parishioners of local shrines, and each household was to install taima, or the ‘divided spirit,’ of the Ise deities in its house altar, thereby becoming a branch of Ise Grand Shrine. State Shinto proved effective in instilling a sense of patriotism and loyalty to the emperor. It is natural therefore that the Japanese rulers erected Shinto shrines in its occupied territories both to promote loyalty to the emperor and symbolize the subjugation of the population. In 1925 the Japanese built a jingu, the highest in the shrine hierarchy, in Seoul as ‘the great source of transplanting the national manners’ and made it the sanctuary of Amaterasu and Emperor Meiji (Figure 1). Under the umbrella of Chosen (Korea) Jingu in Seoul, about 1,140 Shinto shrines had been erected throughout the Korean peninsula by the end of the colonial regime in 1945.

Excerpt 2, taken from pp. 611-613

“However, as Japan prepared to invade mainland China, Japanese militarists and ultranationalists had been instilling a war psychology and demanding unconditional loyalty. In early 1935, royalists in the Japanese government and military launched the movement for ‘the Clarification of the National Essence,’ an ultra-nationalist campaign to mobilize the nation under the emperor’s supreme authority. The ‘national essence’ (kokutai) meant the theocratic ideal that the emperor ‘rules eternally according to the divine oracle of the imperial ancestors.’ They condemned the idea that the emperor was a constitutional entity who should exercise his sovereignty legally, and depicted him as a supra-legal god-man who commanded absolute loyalty. In the wave of nationalistic-militarist fervor, the movement to build Shinto shrines and the demand to attend the Shinto rites intensified throughout Japan and its occupied territories (Figure 2).

The effect of this excitement was even more keenly felt in colonies than in Japan proper. No wonder, then, that an unmistakable change in the Japanese colonial officials’ attitude came in the fall of 1935. In September 1935, the Government-General ordered provincial governors to require all students to attend shrine exercises; governors had little choice but to comply. This insistence upon attendance accompanied a change in the nature of shrine ceremonies that
Christian students had to attend. To this point, the ceremonies that they were urged to attend had been memorial services in honor of the war dead. Now, they were ordered to participate in the Shinto shrine rites and perform obeisance to the kami or spirits residing there. Missionaries, in their capacity as school principals were ordered to go to State Shinto shrines. Since all State Shinto shrines were branches of a single imperial cult, a refusal to do obeisance at Shinto shrines or any question about the appropriateness of the rites was considered lèse-majesté. Any unyielding Korean should expect imprisonment and brutal punishment, and any uncompromising missionary was likely to be deported.

The loyalty of the occupied population was always a matter of concern, and the patriotic ceremonies could be used both to enhance patriotism and to ferret out any malcontents. Moreover, the mission schools were far more influential in Korea than in Japan. The missionaries had founded dozens of middle schools, and Korean Christians, under their guidance, had established hundreds of primary schools, long before the Japanese took control of Korea. Such schools were among the earliest modern educational institutions for Koreans. In 1923, thirteen years after the annexation, 58,017 Korean children were attending 920 church primary schools and 7,816 students were studying at 54 secondary mission schools. In comparison, the Japanese government had established a complete public school system in Japan proper; there were only a handful of Christian schools that ‘might be left out of account.’ Therefore, one can understand why the colonial authorities in Korea, under pressure from militarists, Shinto royalists, and the nationalistic Japanese press in Korea, came to insist on missionary students’ obeisance to Shinto.

The missionary schools under the auspices of the American Northern Presbyterian Mission, and especially those in Pyongyang, became the points of collision as the imperial cult intensified. There were several reasons for that confrontation. First, the Korean students were the main target of assimilation policy and patriotic indoctrination. The Japanese wanted to Japanize Korea by making the Koreans loyal Japanese, but they found it extremely difficult to change the mind and attitude of the adults. Thus they wanted the younger generation of Koreans to have an intellectual comprehension of the need for the union of the two nations and to see their responsibility as Japanese subjects. The worship of Japanese gods was ‘the most important feature’ in the assimilationist campaign. This meant that the worship of the imperial ancestors was, according to a Japanese official, ‘the basis of moral virtue’ of Japan and hence ‘must be inculcated in the minds of all the students.’ Therefore, Japanese authorities made imperial worship a required part of the curriculum, and kept a watchful eye on the Shinto observation of Korean students.

Unit 3, Lesson 2

Objectives:
- SWBAT understand, evaluate, and synthesize the varying ways Koreans identified with the Japanese empire during World War II.
- SWBAT compare, evaluate, and reconcile potentially conflicting views and experiences. This includes both historians’ interpretations and the views of people who experienced the events studied.

Standards:
MWH.9-12.11: “The consequences of imperialism were viewed differently by the colonizers and the colonized.”
MWH.9-12.1: “The use of primary and secondary sources of information includes an examination of the credibility of each source.”
MWH.9-12.2: “Historians develop theses and use evidence to support or refute positions.”

Lesson compelling question: How did World War II change how Koreans identified with the Japanese empire?

Hook (5-10 minutes):
- Review (5-10 minutes): The teacher will begin class by reviewing the previous night’s homework with students. The teacher will verbally review MOTU analysis for each assigned source with students. The teacher will begin with source A, and prompt a different student to respond with his or her answers for each category of MOTU. The teacher will do the same for source B. As the teacher reviews, students should have their completed MOTU analyses in front of them (physical or digital) to check their work and add notes if necessary. Once the teacher has reviewed both featured sources for the lesson, he or she will move on to the body.

Body (35 minutes):
- Writing for understanding (20 minutes): Students will receive 20 minutes to individually construct a short essay length response to the lesson compelling question: How did World War II change how Koreans identified with the Japanese empire? Student answers should be approximately 300-500 words. Depending on the classroom, students may type this in a Google or Word Document and submit it digitally via an online LMS. Alternatively, students may write this out by hand. The teacher should provide paper for students to write on if this option is chosen. In their responses, students should specifically address how they think Koreans identified before the war, and how that changed (if they think it did) during the war. Students should explain their reasoning and cite specific evidence from the lesson featured sources in their responses. When finished, the completed short essays should be turned into the teacher (either digitally or physically).
- Small group simulation/analogy (15 minutes): After students complete their short essays, the teacher will split the class into small groups of 2-3 people. Group members will debate whether they would identify with the Japanese empire or with an independent Korea if they were ethnic Koreans living in Korea during this time period. Groups will receive 6 minutes for each group member to share his or her individual argument. Group members should cite specific evidence from the sources and may reference any material or concepts from previous lessons or units. Groups will then receive 4 minutes to decide on a consensus to share with the class. The teacher should verbally alert the class when each of these time stamps has passed.
• After the first 10 minute section of the activity is over, groups will share out with the class. One person from each group will share his or her group’s consensus on how they would identify if they were an ethnic Korean living in Korea during this time period. Each group should receive a chance to share. Group spokespeople should cite specific evidence from the lesson sources and may reference any material or concepts from previous lessons and units as appropriate. If they do not do so, the teacher should prompt students to cite evidence and explain their group’s reasoning.

Closure (5 minutes):
• Exit ticket: The students will complete an exit ticket, answering the lesson compelling question: How did World War II change how Koreans identified with the Japanese empire? Students may complete this either digitally through an online LMS or physically by writing answers on a piece of paper. Students’ answers should be approximately 2-3 sentences in length.
• Assigning homework/previewing next lesson: The teacher will also assign homework for the following day. Students should read/view all of the featured sources for lesson 3. Students should analyze them using the MOTU framework and record their answers. The teacher will tell students that they will be participating in a Socratic seminar the next day, so students should read their sources with particular care.

Excerpt 1, taken from p. 486:
“The maturation of the Korean publishing industry took place a time when the outbreak of war in the mainland would have a profound impact on the Korean peninsula. In Japan, World War II is often called the Pacific War or the Fifteen Year War, because the hostilities began with the Japanese invasion of Manchuria in September 1931. The establishment of the puppet state Manchukuo in 1932 by the Japanese initially elicited a wide range of reactions from Korean intellectuals. While some leading Koreans from the beginning supported the Japanese military expansion, there was also a sense that a protracted war between Japan and China could eventually lead to Korean independence. Yet, as Han To-yn and Kim Chae-yong suggests, an important turning point in moving Korean intellectuals towards active collaboration with the Japanese empire may have been the collapse of key Chinese cities in late 1938. When Paek Ch’ol (1908–85), one of the most renowned literary critics of the colonial period, heard about the news and saw photographs of the rapid fall of Chinese cities like Beijing, Shanghai and Nanjing, he exclaimed, ‘My body trembled from excitement as our horizon suddenly became refreshingly clear’, and he argued that Korean intellectuals who were critical of this event were being far too shortsighted. Paek further remarked, ‘We may disregard everything else, but just the fact that the feudal castle gates have collapsed gives this event more than enough historical significance – since it’s already a crumbling castle gate, the faster it falls the quicker history will progress’. This sense that Japan’s stunning successes in China signified the emergence of a new East Asian world order would convince many Koreans that resistance was ultimately futile. Instead of being critics of the colonial state, increasing numbers of colonial intellectuals became active supporters of
Japan’s effort to build a New Order in East Asia.

The war on the mainland would have a major impact on colonial publications starting with the first outbreak of hostilities in the early 1930s. Even though print production steadily grew throughout the 1930s, strict censorship continued to limit expression and the relatively liberal period of the 1920s would quickly come to an end. The second outbreak of hostilities in 1937 further transformed the peninsula and inaugurated the total mobilisation of the colonial population for the war effort. Increasing paper shortages and wartime censorship policies forced the closure in 1940 of the two major privately owned vernacular language newspapers, the Choson ilbo and the Tonga ilbo. The considerable diversity of publications that could be found throughout the 1920s and 1930s would disappear all together in the early 1940s. Only a few vernacular journals and the Maeil sinbo newspaper, which was the official organ of the colonial state, would continue to publish until the end of the war in 1945. However, despite the contraction in the number of publications, the volume of production in the 1940s continued to be significant and some titles recorded circulation figures that far exceeded those that could be found in previous decades.

12 Paek Ch’ol, “Si daejok unyonui suri” (Accepting the circumstances of the age), Choson ilbo (2–7 December 1938), cited in Han To-yon and Kim Chae-yong, “Ch’inil munhagwa kundaesong” (Collaborator literature and modernity), p.37.

13 The Japanese colonial administration began to mobilise the Korean population for its expanded war effort with the passage of the Kukkach’ongdongwonbop or the National General Mobilisation Law in 1938 and intensified the process of assimilating Koreans into the Japanese empire. For more on the mobilization of Koreans during the late colonial period see Carter J. Eckert, “Total War, Industrialisation, and Social Change in Late Colonial Korea”, in Peter Duus, Ramon H. Myers and Mark R. Peattie (eds), The Japanese Wartime Empire, 1931-1945 (Princeton, NJ: Princeton University Press, 1996), pp. 3-39; Ch’oe Yu-ri, Ilche malgi sikminji chibaejongch’aegyon’gu (Research on late colonial policies of control) (Seoul: Kukhakcharyowon, 1997).

Excerpt 2, taken from pp. 487-88

“One frequent theme in late colonial visual culture is the appearance of maps and images that portray the expansion of the Japanese empire and Japan’s progress in waging the Pacific War. What may be particularly noteworthy is that maps of Korea and Japan often show the two countries as one contiguous geopolitical entity and distinguished from the rest of the Japanese empire. Examples include the December 1942 cover of The Light of the Peninsula that shows a young school-boy examining a map of East Asia and the October 1942 cover of The Light of Korea that shows a close-up of the northern border. In both cases, Korea and Japan are the same colour red and distinguished from the rest of the map. Such maps encouraged the idea that Koreans and Japanese belong to the same contiguous nation, despite the obvious disparities that existed between the colony and the metropole. Maps and images of Manchuria occupied an especially prominent position in late colonial publications, and they drew attention to the ‘northern frontier’ as a space to be defended for the security of the peninsula as well as a site of economic opportunity for Koreans. The Japanese expansion into Manchuria coincided with the large-scale immigration of Koreans, who numbered approximately one million in 1930 and 1.5
96

96

million in 1945.19 Manchuria would provide a new start for displaced Koreans, especially tenant farmers forced off their land with the consolidation of agricultural land into large land holdings. 18 Pandojigwang (The light of the peninsula) (December 1942); Chogwang (The light of Korea) (October 1942).
19 For more on Korean migration to Manchuria see Hyun Ok Park, Two Dreams in One Bed: Empire, Social Life, and the Origins of the North Korean Revolution (Durham, NC: Duke University Press, 2005).”

Excerpt 3, taken from p. 489-492

“The reconfiguration of the geopolitical space under Japanese rule was not the only change depicted in the visual culture of colonial Korea. Colonial ideologues placed considerable effort in reinventing the colonial subject into an individual who was fully capable of meeting the demands of the empire. The reshaping of colonial subjectivities and notions of beauty took place at the most fundamental level with new aesthetics for appreciating the body. Working men were often drawn shirtless and in muscular form, such as in the October 1941 edition of New Era (Fig. 2).27

These images projected a sense of virility and masculinity. Perhaps more significantly, they portrayed the common workers as powerful individuals who had the capacity to build an empire. Men were also shown exercising in military drills and presented in a dynamic and forceful manner, such as the hundreds of prone exercising men on the August 1943 cover of The Light of Korea and the hundreds of shirtless men shown exercising in the photo insert of the same issue.28 This focus on depicting strong and healthy men was juxtaposed in the colonial media with the images of Korean men lined up for health inspections by the colonial authorities.29 In many ways, these pictures of the Japanese colonisers measuring the health and determining the ‘fitness’ of their Korean subjects to serve the Japanese empire sent the message that Korean men must strengthen and beautify their bodies to meet the criteria of the Japanese to become ‘First Class Imperial Citizens’. While Korean men were encouraged to work in factories and mines to serve the empire, the ultimate model for emulation was the military man dressed in full military gear. Pictures of soldiers often showed them fully equipped and standing guard ready to defend the nation. A common theme in the visual culture of late colonial Korea is that of a fully dressed soldier standing in stark contrast next to his traditionally dressed family.30 Such symbolic contrasts between the generations reinforced the message that the soldier represents the New Man who belongs to a new generation of Koreans who had refashioned their identities to dedicate themselves to the wellbeing of the nation.

The men were not the only colonial subjects who underwent a transformation within the colonial media, for there were also a number of new strategies for portraying women. Korean women had a dual mission in the late colonial period. While women maintained their traditional role of homemakers, they were also encouraged to labour in the factories for the war effort. The traditional role of women, such as taking care of the children and the home, continued to appear frequently in the colonial media. In that sense, the traditional ways of appreciating the beauty and purity of women did not disappear. Yet the visual representations of traditional woman in late colonial Korea often portrayed them waving Japanese flags (Fig. 3) or saving money for the war effort. Thus, the existing symbols of female femininity may have been retained, but a new layer of wartime symbols was fused into the images. The women of late colonial Korea were also
represented in non-traditional roles, such as factory workers and military nurses. These working women were presented in dynamic ways that underlined their important duties as individuals who could meet both the demands of the family and the state. 

27 Sinsidae (New era) (October 1941).
28 Chogwang (The light of Korea) (November 1943).
29 One example is a photograph of a physical examination for naval recruiting where bodies are being measured for fitness in the October 1943 issue of The Light of Korea.
30 Chogwang (The light of Korea) (November 1943)."

Excerpt 4, taken from pp. 494-495

The Japanese army began to accept volunteer Koreans in 1938 soon after the outbreak of the Second Sino-Japanese War, and in May 1942 they announced that the conscription of Korean soldiers would begin in 1944. The start of the compulsory draft in Korea triggered numerous outpourings of ‘gratitude’ for allowing Koreans to enter the Japanese Army, and large public ceremonies were held to celebrate the event. A wide variety of visual images were utilised to mobilise support for the conscription of Koreans. The Maeil sinbo carried a series of advertisements during the summer of 1943 under the caption ‘I will accept your call’. The drawings depict many of the themes that were common during the late colonial period, such as a young Korean soldier standing next to his traditionally dressed parents on 6 August 1943 and an image of a marching soldier with full military gear on 4 August 1943. The photomontages that show large enthusiastic crowds cheering the departing troops were frequently deployed to mobilise Koreans. A two-page pictorial in the September 1943 edition of The Light of the Peninsula is entitled, ‘The Glorious Morning when the Army’s Gates of Honor Opened’. The caption raves about the honour that has been bestowed upon the Korean people, because Korean men were now considered full members of the Japanese military, which further implied that Koreans would be treated just like the Japanese once they passed through the threshold of the ‘Gates of Honor’. The portal imagery can again be found in The Light of Korea in the slogan, ‘From the school gates to the army gates’. In essence, the public spectacles that celebrated the opening of the gates to the military served as a metaphorical rite of passage that colonial subjects had to go through to become fully formed modern subjects in the eyes of the colonisers.

While the mass gatherings in support of the military draft dominated the public lives of Koreans, the visual images of the late colonial period also portrayed the transformation of their individual private lives. The colonial state attempted to control the domestic realm of its subjects by portraying individuals who showed loyalty to the empire and welcomed the militarisation of colonial society. Representations of everyday life became permeated by the symbols of the Japanese empire, such as a baby holding a toy warplane emblazoned with a Japanese flag on the cover of the March 1942 issue of The Light of the Peninsula. The invasion of the everyday by the symbolic reminders of the colonial state served to normalize the totalitarian culture of the late colonial period and urged Koreans to show patriotism for the nation, even though it had been absorbed into the larger Japanese empire. The children in particular became the objects of colonial propaganda, for one frequent theme among late colonial publications was that of children playing with a toy airplane juxtaposed with photographs of warplanes flying overhead. Pictures of soldiers interacting with children or farm women looking up at passing warplanes are yet more examples of how the symbols of the empire’s military expansion became portrayed as a normal part of the daily routine of Koreans. Thus, the Japanese empire
attempted to dominate almost every aspect of the lives of its colonial subjects, and the wartime mobilization of the population encouraged the reinvention of both public and private life in late colonial Korea.

33 Korean volunteers began to be accepted into the Japanese army after February 22, 1938. The numbers enlisted remained started in the hundreds but eventually reached 6300 by 1943. Tens of thousands of Koreans were drafted once conscription started in September 1944. Yet few Koreans were actually sent to the warfront before Japan’s surrender on August 1945 because of the length of time required to train new recruits. Miyata Setsuko, *Chosonminjunggwa hwangminhwa chongch’ae* (The Korean people and policies to create ‘imperial citizens’), trans. Yi Hyong-nam (Seoul: Ilchogak, 1997), pp. 42, 154-7.

34 *Pandojigwang* (The light of the peninsula) (September 1943).

35 The institution of military conscription led to increased calls for allowing Koreans the voting franchise, for Koreans argued that they now paid both regular taxes and the ‘blood tax’. For more on the relationship between military conscription and calls for equality among Korean collaborators see Miyata Setsuko, *Chosonminjunggwa hwangminhwa chongch’ae*. A law was passed in April 1945 that granted the vote to Korean colonial subjects, but it was never implemented before the end of the war. Even had the law been instituted, the property restrictions would have given the vote to approximately 2.3% of Koreans. Ch’oe Yu-ri, *Ilche malgi sikminji chibaejongch’aegyon’gu* (Research on late colonial policies of control), p. 245.

Excerpt 1, taken from p. 173:

“The Japanese (and Koreans) recognized the 1931 Manchurian Incident as being instrumental in changing Korean perceptions toward Japanese rule. A number of changes accompanied this event. Japan’s expansion onto the Asian continent increased Korean economic opportunity both in Korea and in Manchuria as the government-general placed stronger emphasis on industry. Increased opportunity, along with stronger assimilation rhetoric, encouraged Koreans to consider their ethnic (Korean) identity in a broader racial (Asian or ‘yellow’) context. The present Korean government investigation into the ‘pro-Japanese’ actions of these Koreans condemns those it identifies to be ‘pro-Japanese’ Koreans for their traitorous actions to the Korean state and people: rather than join other Koreans in the fight for Korean liberation, these Koreans profited from Japanese colonial rule. Contributors to this discussion must consider the circumstances under which all Koreans made their life choices. With the world quickly moving toward war, did it make more sense for Korea to seek independence or to seek autonomy within the context of a greater East Asian alliance?”

Excerpt 2, taken from p. 188:
“From 1937, war escalation forced the government-general to once again reevaluate its Korean policy. The review of the Naisen ittai-strengthening document gave Koreans another example to critique Japanese assimilation policy. Discussion meetings held behind closed doors empowered the Koreans in attendance to voice their opinions rather bluntly, and many directly challenged Japanese policy for failing to live up to its hype. The twelve Korean participants selected by the government-general were among the Japanese administration’s most trusted Korean allies, people who had staked their future and their reputation on Japan maintaining long-term control over the Korean Peninsula. To them, Korean independence represented the worst possible scenario. Rather, Korean liberation from their traditional roots, and Japanese recognition of Koreans as imperial subjects, constituted the scenario that would best secure their fortunes and dignity. Carter J. Eckert describes these Koreans as individuals who ‘had to abandon whatever nationalist aspirations they might once have had and were ready to embrace a new Japanese order that left no room for the expression of a separate Korean identity.’

Excerpt 3, taken from pp. 190-191

“Yi also redirected the assimilation problem from Korean involvement to Japanese recognition of Korean inclusion. The government-general’s Counterplan Proposal had focused on improving Korean understanding but offered little in the way of instructing the Japanese people on Korea’s place in the empire. The Japanese, too, needed to be better informed. Yi began by making the extraordinary claim that ‘there was not a single Korean who did not agree with, or welcome, Naisen ittai,’ before adding the conditional caveat: ‘If this means that [Koreans] will be at the same level as Japanese (Naichi to onaji teido) then they will not run to communism or nationalism.’ He continued: ‘What about the Japanese? Naturally, there are many who embrace Naisen ittai, but there are others who disagree with it. Some feel that it would not work, while others feel that Koreans and Japanese were to be considered as equals.’ He explained:

I have traveled here and there in Japan, and save for the minority of those who travel frequently to Korea, the majority of Japanese have not the slightest idea about what Korea is. Some believe that because they have been to Korea a while back they know the country. Some are talking about a time twenty years ago. They may know Korea of twenty years ago but they do not know contemporary Korea.... It is important for Japanese to understand Korea’s present situation, the present state of the Korean people, and the value of the Korean Peninsula to the Japanese Empire.

He also cautioned that the Japanese have to come to accept Koreans as their ethnic brothers: people can go around saying Naisen ittai! Naisen ittai, but if they respond to Korean efforts to identify themselves as Japanese by refusing to accept them as such then people ‘will go about as they like’(kattei ni suru).

Excerpt 4, taken from pp. 193-194

“Hyŏn Yŏngsŏp’s The Path That the Koreans Must Take represents one of the more comprehensive efforts by a Korean to demonstrate support for Japan’s assimilation plan. The book, first published in 1938, apparently enjoyed success. By 1940 it had already reached its twelfth printing. Hyŏn’s motivation was to delineate reasons why the Koreans must change: to narrow the gap separating the deprived Korean and the advanced Japanese. He then prescribed a
remedy: the actions that Koreans must take to become ‘complete imperial subjects.’ Hyŏn, who acknowledged his thoughts to be a result of his quest for truth that led him to read widely in Marxist, anarchist, and nationalist thought during his school days, became attracted to Japanese group-centeredness (over individualism) upon arriving in Tokyo. He now described himself as ‘one Japanese national’ (Nihon kokumin nohitori) who felt a heavy concern for the people of his birthplace. Since the 1937 China Incident, he explained, the term Naisen ittai had injected optimism within the Korean population. However, optimism alone will not bring this union; much work needed to be done. He saw his book as his contribution toward helping Koreans understand their responsibilities.

He began his monograph by describing the historical significance of what he termed Korea’s ‘Meiji Restoration’—the Japanese annexation of the Korean Peninsula. Hyŏn’s summary of pre-annexation Korean history proved harsher (but just as misinformed) than that offered by the Japanese: Korean history before 1910 was ‘hell’: it had passed through a ‘dark history’ as a ‘colony’ under the Han Chinese; its culture did not even begin until the Three Kingdoms period; unlike Tokugawa Japan, Korea had never developed a popular culture.

Excerpt 5, taken from pp. 195-196

“This path must begin, Hyŏn explained, with Koreans coming to understand the Japanese. They must first realize the ‘majestic existence’ (genzen tosonzai shiteiru) of Japanese culture that synthesized different cultures. They must endeavor to ‘become Japanese’ (as he had). That is, they must ‘shed the Chinese kanbun culture and widely accept Japanese culture.’ This was but the first step leading Koreans toward becoming ‘complete imperial subjects.’ Koreans must also recognize the ‘historic significance’ of annexation and ‘thank Japan’ for admitting their territory into its empire. Finally, the Korean people must recognize the ‘fate that the two peoples share [and] adopt a feeling of being Japanese.’ Like the Japanese, Hyŏn placed full responsibility on the Korean people embarking on this change. As Korea, he predicted, would never again return to the status of ‘independent country,’ it is Koreans’ responsibility to adopt the spirit of Japanese subjects (Nihon kokumin) if they wished to attain full political rights, be provided with compulsory education, participate in Japan’s military service, and gain freedom of residence. Koreans must ‘demonstrate their heightened respect and admiration for the emperor’ (by making pilgrimages to the homeland and to Ise and Meiji shrines), embrace the Japanese language as their own, and discard their more obvious signs of Korean-ness (such as Korean dress, cuisine, and housing).”

81 Ibid., 143–45, 151–54.”
Unit 3, Lesson 3

Objectives:
- SWBAT understand the multiple Japanese-inflicted atrocities that are the basis of modern tensions between the two countries.
- SWBAT construct an argument supported by evidence found in both primary and secondary sources.

Standards:
MWH.9-12.11: “The consequences of imperialism were viewed differently by the colonizers and the colonized.”
MWH.9-12.1: “The use of primary and secondary sources of information includes an examination of the credibility of each source.”
MWH.9-12.2: “Historians develop theses and use evidence to support or refute positions.”

Lesson compelling question: Was Japan’s wartime mobilization of Koreans justified?

Hook:
- Review (5 minutes): The teacher will verbally review the sources assigned for homework the previous night. As with previous lessons, the teacher will verbally review all components of MOTU for each source. Different students should provide verbal answers for each category of MOTU. The teacher may elect to randomly call on students. The teacher should ensure that all students have a strong comprehension and understanding of the sources in order to increase the chances of a fruitful Socratic seminar.

Body (35 minutes):
- Note on time: The Socratic seminar will consist of three ten-minute rounds. The extra five minutes is to allot for giving directions and allowing students to take notes in between rounds.
- Socratic seminar (30 minutes):
  - Students will arrange themselves in a horse-shoe/U-shaped pattern as much as possible. The teacher will verbally give students instructions for the activity. There will be three ten-minute rounds with one main question provided by the teacher for each round. However, if the conversation is especially fruitful in one topic, it can bleed over into the next round’s time. Students should have their MOTU analyses in front of them and the lesson sources easily accessible as well. The teacher will keep time, or can task a student with keeping time.
  - After directions are given and students are ready, the teacher will begin keeping time and pose the first question. It is: Was Japan’s wartime mobilization and use of Koreans a generally justified emergency measure, or should it have counted as war crimes? (Note: Japan was never prosecuted for any of its wartime use of Koreans. It was prosecuted for incidents such as the Nanking Massacre, but not the comfort women or forced labor of Koreans.)
  - As students provide responses, the teacher should use follow-up questions when necessary. The teacher should ask students to explain their reasoning, cite evidence, and even play devil’s advocate where appropriate.
  - After the first ten-minute round is over, the teacher will move onto the second and third. In between rounds, the teacher should give students a few minutes to take notes on the previous round. Students should note main points of the conversation as well as any arguments they found particularly interesting or compelling.
• The last two questions are as follows:
  o Should Japan formally apologize to Korea for the comfort women? Japan has made various statements “expressing regret” but has never issued a formal apology ratified by the Diet. Is this enough, or is a formal apology warranted?
  o Moreover, should Japan apologize to Korea for the entire occupation period? Similarly to the previous question, Japan has made statements “expressing regret” about this time period but never ratified a formal apology through the Diet. Students may draw upon knowledge from previous units for this question. Does the overall occupation period represent an offense serious enough to Koreans that such an apology is warranted?

Closure (10 minutes):
• Exit ticket/individual reflective writing (10 minutes): Students will receive ten minutes to construct a brief written response to the lesson compelling question: Was Japan’s wartime mobilization of Koreans justified? Students should cite evidence from the sources as well as incorporate discussion points from the Socratic seminar.

Excerpt 1, taken from pp. 131-132
“SIN KWANGSONG, (m) b. 1915, farmer, North Kyongsang Province:
They drafted me to labor in early spring 1945. They just said, ‘You and you have to go.’ They sent me to work in a mine in Kyushu, Japan, but I got sick and they sent me back to my hometown.
When I regained my health, they drafted me again. This second time they sent me to a pipe factory in Saitama prefecture. People said, ‘Oh, it is so dangerous,’ but I found that it was not really so dangerous. Physically, I mean. They paid us a tiny, tiny salary. I sent it all home to my family. The mine where I was before had been safe, but at this Saitama factory there were many B-29 bombing raids. We had to quit working every time there was a raid and go into a bomb shelter.
They told us that the Americans had invented a new weapon and when the Americans invaded the mainland, we would all die gloriously. We made sharp bamboo spears so we could stab the Americans when they came.”
Excerpt 2, taken from pp. 134-135
“KIM PONGSUK, (f) b. 1924, housewife, Kyonggi Province:
When I was about twenty, the local Neighborhood Association – the watchdog group, spy network, channel for government rules and dictates – came to verify my age and marital status.
I had no choice but to acknowledge that I was young, single, and living at home. The next thing I knew, the local police came and summoned me to appear at the elementary school yard on a certain date.
A lot of other girls got called also, all about the same age, and the Japanese told us that we would serve the Emperor and the great cause of the Japanese empire by becoming nurses and taking care of the Imperial Japanese soldiers. They told us that the pay would be very good and we would be well taken care of. Some girls were really very excited about doing this.
We were to be sent to the front, but to do that we needed training. They gave each of us a wooden rifle and we had to practice. I kept thinking, I’m a woman. Why do I need this rifle? The
rifle had a pretend bayonet and we had to plunge it into a straw "person" on the ground, again and again.

I hated this! I didn't want to do it. My parents decided I should get married, and then I wouldn't have to go. So I obeyed my parents and got married, and it turned out to be a fortunate thing. Much later, I found out that the women who went overseas to the front were forced into being comfort women. Japanese called these Teishintai, meaning "Volunteer Corps."

I also know about them because my husband met many Korean women serving the soldiers in Manchuria when he was drafted into the Japanese army and sent to the front line. Being married helped me but it didn't help him. He was taken only a few months after our marriage.

My husband, having just married me and missing me, and also seeing that these comfort women were Korean women of the same age as me, when his turn came to go in to them, his physical desire was there, but he kept thinking of me, and he didn't do it. The men lined up outside the barracks doors where the women were, and took their turn. The girl just lay there inside. Each man had a given amount of time, about seven minutes. If he wasn't out in time, the next man went right in and yanked him out. Each door had a long line of men waiting their turns. But when my husband's turn came, he just couldn't go in and do it. The woman, on the wall near her head, used chalk or a pencil to make a mark for each soldier she serviced. She thought she would be paid that way, but it turned out they were not paid anything at all. All this I heard from my husband in Manchuria.”

Excerpt 3, taken from pp. 137-138

“CHIN MYONGHUI, (f) b. 1932, housewife, South Hamgyong Province:

Things were all right until 1942, when I was in fifth grade. Our city of Wonsan was a harbor, so in the morning I had classes and in the afternoon for two hours, our whole school marched to the factory to can fish that were caught right there along the coast. The cannery was huge, with row upon row of building after building. They were supposed to dry the fish, but first the fish had to be pounded. So for two hours every afternoon, we had to go pound the fish. Kids came to work from every school, boys and girls, from fifth grade up to middle school. It was hot and my arms ached, but we couldn't stop. In winter they couldn't dry the fish, so then, three times a week they sent us into the hills to collect pine tree sap. Year in and year out we did this – 1943, 1944, 1945. When it rained, we learned how to give first aid and make bandages, and we practiced running to the air-raid shelter in the hill behind the school. Even the holes in the hill were dug by students, but not by me. I graduated from sixth grade in March 1945, and in April I entered a Methodist mission school. All the missionaries were gone by then, sent to prison camps. Here, after the morning assembly, there were no classes. We knew that the war in Europe was over, so just Japan was fighting nobody could study. Again, we all trooped over to the factories to pound those awful fish.”"
to ‘totally surrender the will to the Emperor, and serve in his name’.

As Japan expanded the war throughout the Pacific, the Japanese authorities sought to control all aspects of civilian life by imposing the ‘wartime system’. By all accounts, the period known as Cultural Rule came to an end as all sectors of the colony were mobilised as part of the war effort.

After 1937, the Japanese forcibly mobilised many Koreans to work in support of the war effort by promulgating a General Mobilisation Law and subsequently a National Conscription Ordinance in 1939. In the early phase of the war, large numbers of Koreans were put into menial jobs to relieve the Japanese men to join the army. Koreans were initially drafted into service called *choyo* (labour draft), which is essentially non-combat labour that involved assembly-line work and mining. As the prolonged war resulted in mounting casualties, the Japanese sought more men to fight. The Japanese implemented a colonial conscription system called *chohei* (military draft) near the end of the war and drafted about 200,000 young Korean men to fight alongside the Japanese.

Kodawau Yusaku, *Kokoku shinmin taruno chigaku no dettei suru chosen kyoikurei n gaisetsu yori* [An Analysis of the Chosun Education Edict from the Perspective of Imperial Subjects’ Self-consciousness and Resistance], in *Bunkyo no Chosen*, March Edition (1938).

Takada Kunihiko, *Kodo kyoiku no genre* [The Principles of Education in the Imperial Way], in *Bunkyo no chosen*, October & November Edition (1938). A good example of the changing role of education from colony building to wartime support can be found in Kunihiko’s article where he exhorts the *raison d’être* of education to be that which serves the immediate needs of the empire.”

Excerpt 2, taken from p. 392

“The fourth and final Educational Ordinance promulgated by the colonial authorities in 1943 was in fact an extension of the ‘Ordinance of Wartime Emergency Measures on Education’. The emergency measures that were outlined had to do with how the school’s social function had evidently changed with the war. In so far as schools in the colony needed to justify their existence in times of total war, they were forced to become commissary bases for the war effort. Both individual and social activities that could not demonstrate their usefulness and practicality in the war effort were considered to be hindrances. In the schools, a fixed daily routine began with the recitation of the ‘Pledge of Imperial Subjects’ followed by long hours of physical labour as part of the war effort. Such practices reduced the individual student to a cog in the imperial war machine.

In fact, the Japanese forced some 4500 technical college and university students into uniform through a ‘student volunteer system’ implemented in 1943. They were forced to volunteer as ‘student soldiers’ (*gakuto hei*) and fight alongside regular soldiers. Furthermore, technical colleges and secondary school students were consistently mobilised as labour for all kinds of public work projects. Even elementary school students were mobilised in the construction of military facilities. In short, the schools in the colony during this period came to resemble a garrison and a training ground for the soldiers of the empire.

Rangi Hisao, *Chosen shokuminchi kyoiku no tenkai to chosen minzoku no teiko – chosen kyoikurei wo chushin toshiite* [The Development of Colonial Education in Chosun and the Resistance by the People of Chosun – With a Focus on the Chosun Education Edicts], in *Sekai kyoikushi kenkyukai: Sekai kyoikushi taikei 5 – chosen kyoikushi* [Society for Research on World Education History: A Genealogy of World Education History 5 – History of Education in Chosun] (Tokyo: Kodansha, 1975). Hisao argues that at each phase of the four education edicts, the Japanese colonial authorities were met by local resistance.
58 Ben-Ami Shillony, “Universities and Students in Wartime Japan,” *Journal of Asian Studies* 45, no. 4 (1986): 769–87. According to Shillony, idealistic patriotism among Japanese students at the height of war prompted them to regard dying as soldiers as a noble duty.”

**Source D:**

Document originally in Japanese, English translation from Asian Women’s Fund “Chapter IX Regulations for the Use of Comfort Stations

Clause 59 Basic Principle
To help to enforce military discipline by providing ways for relaxation and comfort

Clause 60 Facilities
Comfort stations are set up inside the south walls of Nikka Hall…

Visiting days are appointed to each unit.

Hoshi unit -- Sunday.

Kuriwa unit -- Monday and Tuesday.

Matsumura unit -- Wednesday and Thursday.

Narita unit -- Saturday.

Achiwa unit -- Friday.

Murata unit -- Sunday

Clause 61 Price and Time
1 For non-commissioned officers and enlisted men comfort stations are open from 9:00 to 18:00

2 Price
Time limit is one hour for one man.

Chinese -- 1 yen

Korean -- 1 yen 50 sen

Japanese -- 2 yen

Clause 62 Examination
Every Monday and Friday are examination days. On Friday women are examined for sexually transmitted disease …”

Excerpt 2, from same page:
“Clause 63  Instructions
1 Drinking in comfort stations is forbidden.
2 Payment of fee and time keeping should be correctly done.
3 Women should all be deemed as having venereal desease. Use of condoms is absolutely necessary….

Clause 64  Miscellany
1 Women are forbidden to have Chinese as clients.

…

3 Women are forbidden to go out except to specially permitted places.

…

Clause 65  Responsibility of Control
A detachment of military police assumes the responsibility of control.

Clause 65 Supplementary points
1 On visiting days each unit should send leading staff to see around the comfort station.
2 Non-commissioned officers should lead men of his unit to comfort stations…
3 Official holiday of comfort stations is the 15th of every month”

Source E:

“There were not ianfus (comfort women) in former years of military campaigns. To speak frankly, I am an initiator of the comfort women project. As in 1932 during the Shanghai Incident some acts of rape were committed by Japanese military personnel. I, Vice Chief of Staff of the Shanghai Expeditionary Force, following the example of the Japanese naval brigade, asked the governor of Nagasaki prefecture to send comfort women groups. As a result, rape crimes totally disappeared, which made me very happy. At present each army corps was accompanied by a comfort women group, as if the latter constitutes a detachment of its quarter-master corps. But rape acts did not disappear in the Sixth Division, even though it was accompanied by a comfort women group.”
