Amateur Star Gazer's Job: Count The Falling Meteors
by Margaret Finnay

Shooting stars, not the moon, are the fascination for campus star gazers this week.

Dr. Clare Bennett of the biology department suggests that students combine business with pleasure and count the meteors as they streak through the sky tonight from 7 p.m. till 2 a.m.

All dues paid to the Veterans Club will go into the college education of the children of those who are dead. Several social events are also planned for the coming year to make money.

The unusual sky show is the result of the earth's passage close to the orbit of the meteor stream originating from the comet Gliese-Grunzien.

The spectacular big last night but the maximum shower has been predicted to he at 6:30 p.m. on the 11th. Herbert McMath of the McMath-Kelly Observatory suggests that the meteors are notoriously erratic. The maximum will probably only occur on any of the three nights.

Volunteer observers are asked to count meteors during each hour period, recording the head and the tail of each streak.

To be forewarned, you will have to come fast. Guin is as high as six meteors per second awaited in your nimble line for the night of October 9, 1935, when the Gla-spin comet hit near one

Shanty Towners. That’s what the fellows living there call the group of huts at the center of the football field.

There are sixteen steel huts designated alphabetically from A to P and housing mostly freshmen. They are not very homesick and don’t think of giving a salutation to the next day.

There is only one name on the campus that comes to our mind as a true sophisticate. His name is “Towns.”

The outward appearance of the huts is misleading; the inside isn’t at all shanty. There are two sections, one for the girls and a second for the boys.

Shanty Town is self-governed. Each hut has a council of four with one sports coat now finds
